SIERRA
WIRELESS®

4118047
Rev. 8

Important Notice

Due to the nature of wireless communications, transmission and reception of data can never be guaranteed. Data may be delayed, corrupted (i.e., have errors) or be totally lost. Although significant delays or losses of data are rare when wireless devices such as the Sierra Wireless modem are used in a normal manner with a well-constructed network, the Sierra Wireless modem should not be used in situations where failure to transmit or receive data could result in damage of any kind to the user or any other party, including but not limited to personal injury, death, or loss of property. Sierra Wireless accepts no responsibility for damages of any kind resulting from delays or errors in data transmitted or received using the Sierra Wireless modem, or for failure of the Sierra Wireless modem to transmit or receive such data.

Safety and Hazards

Do not operate the Sierra Wireless modem in areas where blasting is in progress, where explosive atmospheres may be present, near medical equipment, near life support equipment, or any equipment which may be susceptible to any form of radio interference. In such areas, the Sierra Wireless modem **MUST BE POWERED OFF**. The Sierra Wireless modem can transmit signals that could interfere with this equipment.

Do not operate the Sierra Wireless modem in any aircraft, whether the aircraft is on the ground or in flight. In aircraft, the Sierra Wireless modem **MUST BE POWERED OFF**. When operating, the Sierra Wireless modem can transmit signals that could interfere with various onboard systems.

Note: Some airlines may permit the use of cellular phones while the aircraft is on the ground and the door is open. Sierra Wireless modems may be used at this time.

The driver or operator of any vehicle should not operate the Sierra Wireless modem while in control of a vehicle. Doing so will detract from the driver or operator's control and operation of that vehicle. In some states and provinces, operating such communications devices while in control of a vehicle is an offence.

Limitation of Liability

The information in this manual is subject to change without notice and does not represent a commitment on the part of Sierra Wireless. SIERRA WIRELESS AND ITS AFFILIATES SPECIFICALLY DISCLAIM LIABILITY FOR ANY AND ALL DIRECT, INDIRECT, SPECIAL, GENERAL, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR EXEMPLARY DAMAGES INCLUDING, BUT NOT LIMITED TO, LOSS OF PROFITS OR REVENUE OR ANTICIPATED PROFITS OR REVENUE ARISING OUT OF THE USE OR INABILITY TO USE ANY SIERRA WIRELESS PRODUCT, EVEN IF SIERRA WIRELESS AND/OR ITS AFFILIATES HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES OR THEY ARE FORESEEABLE OR FOR CLAIMS BY ANY THIRD PARTY.

Notwithstanding the foregoing, in no event shall Sierra Wireless and/or its affiliates aggregate liability arising under or in connection with the Sierra Wireless product, regardless of the number of events, occurrences, or claims giving rise to liability, be in excess of the price paid by the purchaser for the Sierra Wireless product.

Patents

This product may contain technology developed by or for Sierra Wireless Inc. This product includes technology licensed from QUALCOMM®. This product is manufactured or sold by Sierra Wireless Inc. or its affiliates under one or more patents licensed from InterDigital Group and MMP Portfolio Licensing.

>> 1: About This Guide

Introduction

This document describes supported standard and proprietary AT commands available for Sierra Wireless AirPrime® WP products, and provides details where commands vary from the standards.

Important: *This document applies to the following WP Series module groups (as of date of publication): WP85xx, WP75xx, WP76xx, WP77xx.*

These commands are intended for use by OEMs, and are supplemental to the standard AT commands for GSM devices defined by the 3GPP (3rd Generation Partnership Project) in *TS 27.007 AT command set for User Equipment (UE)* and *TS 27.005 Use of Data Terminal Equipment—Data Circuit terminating Equipment (DTE-DCE) interface for Short Message Service (SMS) and Cell Broadcast Service (BSE)*.

Note: For questions or concerns relating to command implementation, please contact your Sierra Wireless account representative.

Command access

Some commands in this reference are password-protected. To use these commands, enter the correct password using **AT!ENTERCND** on page 28. Once the password is entered, all commands are available and remain available until the modem is reset or powered off and on.

The password assigned to **!ENTERCND** is unique to each customer and is configured onto the modem during manufacture. If you do not know your password, contact your Sierra Wireless Account Manager or Sierra Wireless distributor.

Command timing

Interval timing

Some commands require time to process before additional commands are entered. For example, the modem returns OK when it receives **AT!DAFTMACT**. If **AT!DASBAND** is received too soon after this, the modem returns an error.

When building automated test scripts, ensure that sufficient delays are embedded, where necessary, to avoid these errors.

Escape sequence guard time

The AT escape sequence “+++” requires a guard time of 1.0 seconds before and after it is used.

Result codes

Result codes are not shown in the command tables unless special conditions apply. Generally the result code OK is returned when the command has been executed. ERROR may be returned if parameters are out of range, and is returned if the command is not recognized or is not permitted in the current state or condition of the modem.

Response formats

Response formats shown in this document are intended to accurately describe the non-whitespace content of responses. For display purposes within this document, extraneous whitespace content (blank lines between lines of text) may not be displayed, and whitespace (blank spaces) between text segments within lines may be shorter or longer than what is received in actual responses.

For example:

AT!THISEXAMPLE? THISEXAMPLE: TestVal1=7 TestVal2=Hello OK	could be shown in this document without extra blank lines and with less space between TestVal1 and TestVal2	AT!THISEXAMPLE? THISEXAMPLE: TestVal1=7 TestVa2=Hello OK
---	---	---

If automated scripts are used to parse command responses, make sure to parse whitespace appropriately.

References

This guide covers the command sets used by OEMs, designers and testers of Sierra Wireless AirPrime products, plus general operational use commands.

For additional product-specific documentation, refer to source.sierrawireless.com.

Terminology and acronyms

This document makes wide use of acronyms that are in common use in data communications and cellular technology.

Current firmware versions

Version

To determine your firmware revision, enter the identification command **AT+GMR**.

Upgrading

To check for newer modem firmware, go to the device page at source.sierrawireless.com and select the Firmware option.

Document structure

This document describes the proprietary commands listed in the tables below—each table corresponds to a specific chapter.

AT Password Commands—Commands used to enable access to password-protected AT commands and to set the AT command password.

Table 1-1: AT Password Commands

Command	Description	Page
!ENTERCND	Enable access to password-protected commands	28
!SETCND	Set AT command password	29

Modem Status, Customization, and Reset Commands—Commands used to determine modem status, adjust customization settings, and reset the modem.

Table 1-2: Modem Status Commands

Command	Description	Page
!AMR_NB (notification)	Vocoder in use—Unsolicited notification	34
!AMR_WB (notification)	Vocoder in use—Unsolicited notification	34
!ANTSEL	Set/query external antenna select configuration	35
!AVVOCODER (Notification group)	Vocoder in use—Unsolicited notifications	37
!BAND	Select/return frequency band set	38
!BOOTHOLD	Reset modem and wait in bootloader for firmware download	41
+CBST	Select Circuit-Switched Bearer	42
+CEDRXRDP	Read eDRX Dynamic Parameters	43
+CEDRXS	Configure eDRX	44
+CGAUTH	Set/Report PDP connection authentication parameters	45
+CGDCONT	Define PDP context	46

Table 1-2: Modem Status Commands (Continued)

Command	Description	Page
+CMUX	Configure Multiplexing Control Channel	48
+CPSMS	Configure Power Saving Mode (PSM)	50
+CSQ (notification)	RSSI change across threshold—Unsolicited notification	51
!CUSTOM	Set/return customization settings	52
!DATALOOPBACK	Enable/disable and configure loopback mode	58
!EONS (notification)	Enhanced Operator Name String (EONS)—Unsolicited notification	59
!EVRC (notification)	Vocoder in use—Unsolicited notification	59
!EVRC_B (notification)	Vocoder in use—Unsolicited notification	59
!EVRC_NW (notification)	Vocoder in use—Unsolicited notification	59
!EVRC_WB (notification)	Vocoder in use—Unsolicited notification	59
!GETBAND	Return the current active band	59
!GETRAT	Return the current active radio access technology (RAT)	60
!GSM_EFR (notification)	Vocoder in use—Unsolicited notification	60
!GSM_FR (notification)	Vocoder in use—Unsolicited notification	60
!GSM_HR (notification)	Vocoder in use—Unsolicited notification	60
!GSTATUS	Return operational status	61
!IMAGE	Manage Firmware Images	70
!IMPREF	Query/set Image Management preferences	72
+KCELL	Display Detected Cell Details	73
+KMCLASS	Set 2G multislot class	76
+KSLEEP	Configure UART1 power management (sleep mode entry conditions)	77
+KSRAT	Set the current RAT	78
+KSREP	Enable/disable startup reporting	79
+KSUP (notification)	Startup notification (unsolicited notification)	79
!LTEINFO	Display LTE network information	80
!MAPUART	Map services to UART	82
!MCUWATCHDOG	Set/Report MCU Watchdog Parameters	83
!MODE (notification)	Current system mode—Unsolicited notification	84
!MUSLEN	Enable/disable unsolicited messaging feature	84
!NETNUM	Set/report number of supported network interfaces	85
!NI (notification)	Network identity—Unsolicited notification	86

Table 1-2: Modem Status Commands (Continued)

Command	Description	Page
!PACKAGE	Return package version string	86
!PATEMP	Return PA temperature information	87
!PATEMP (notification)	PA temperature state change—Unsolicited notification	87
!PCDEFR (notification)	Deferred shutdown timer expired—Unsolicited notification	88
!PCINFO	Return power control status information	89
!PCOFFEN	Set/return Power Off Enable state	90
!PCTEMP	Return Power control temperature information	91
!PCTEMP (notification)	PA temperature state change—Unsolicited notification	92
!PCTEMPLIMITS	Set/report temperature state limit values	93
!PCVOLT	Return current power supply voltage information	94
!PCVOLT (notification)	PMIC voltage state change—Unsolicited notification	94
!PCVOLTLIMITS	Set/report power supply voltage state limit values	95
!POWERDOWN	Power down system	95
!POWERMODE	Set the module power saving mode	96
!POWERWAKE	Configure ULPS (ULPM/PSM) wakeup sources	99
!PRIID	Report module PRI part number and revision	102
!PRLVER	Display current PRL version	102
!PSCS (notification)	Packet switched data call status—Unsolicited notification	103
*PSRDBS	Select operating bands	103
!QCELP13K (notification)	Vocoder in use—Unsolicited notification	105
!RESET	Reset modem	105
!RI (notification)	Roaming indicator state—Unsolicited notification	105
RING (notification)	Incoming call notification—Unsolicited notification	105
!RSSI (notification)	Signal strength—Unsolicited notification	106
!SCACT	Activate/deactivate data connection	107
!SCUMMTU	Set/Report MTU Size	108
!SECINFO	Display bootloader debug configuration	109
!SELACQ	Select RAT acquisition order	110
!SELCIOT	Set/report Cellular IoT preferences	112
!SELMODE	Set/return current service domain	113
!SELRAT	Set preferred RAT	114

Table 1-2: Modem Status Commands (Continued)

Command	Description	Page
!SELSNR	Set/report LTE-NB1 band scan configuration	116
!SRV (notification)	WWAN network status change—Unsolicited notification	116
!UDINFO	Return information from active USB descriptor	117
!UDPID	Set/report product ID in USB descriptor	118
!UIMREGSTATE (notification)	UIM registration state—Unsolicited notification	118
!UIMSTATUS (notification)	UIM status change—Unsolicited notification	119
!USBCOMP	Set/report USB interface configuration	120
!USBINFO	Return information from active USB descriptor	121
!USBPID	Set/report product ID in USB descriptor	122
+WANS (notification)	Call answered—Unsolicited notification	123
+WCC (notification)	Call control status change—Unsolicited notification	124
+WCNT (notification)	Call connected—Unsolicited notification	125
+WDDI (notification)	DTMF tone detection—Unsolicited notification	126
+WDDM	Enable/disable DTMF detection	126
+WEND (notification)	Call end status—Unsolicited notification	127
+WFWUPD	Download/install firmware package	130
+WFWUPD (notification)	Firmware package install notification	131
+WJAM (notification)	Jamming events—Unsolicited notification	132
+WJAMTHRESH	Set/Report Jamming Detection Threshold Value	133
+WMGF (notification)	SMS memory full—Unsolicited notification	133
+WORG (notification)	Call origination attempt—Unsolicited notification	134
+WRMICN (notification)	Roaming icon—Unsolicited notification (CDMA only)	134
+WUSLMSK	Enable/disable unsolicited notifications	135
+WVMI (notification)	Voicemail received—Unsolicited notification	138

SIM Toolkit Commands—Commands and notifications used to enable the AT Interface's SIM toolkit support, and receive and respond to unsolicited SIM command notifications.

Table 1-3: SIM Toolkit Commands

Command	Description	Page
*PSSTKI	Configure AT interface's SIM toolkit support	140
!STKC	Report last unsolicited proactive SIM command notification	141
!STKC (notification)	Unsolicited proactive SIM command notification	142

Table 1-3: SIM Toolkit Commands (Continued)

Command	Description	Page
!STKCR	Respond to proactive SIM command	143
!STKGC	Get (retrieve) data for last unsolicited proactive SIM command notification	148
!STKMS	Inform SIM of menu item selection or provide help information	160
!STKN (notification)	Response to mobile-originated Call or SMS control request (notification)	161
!STKPD	Select host-supported STK features	163

Diagnostic Commands—Commands used to select frequency bands and diagnose problems.

Table 1-4: Diagnostic Commands

Command	Description	Page
!BCFWUPDATESTATUS	Report status of most recent firmware update attempt	166
!ERR	Display/clear diagnostic information	167
!GCCLR	Clear crash dump data	167
!GCDUMP	Display crash dump data	167
!RXDEN	Enable/disable WCDMA/LTE receive diversity	168

Test Commands—Commands required to place the modem in particular modes of operation, test host connectivity, and to configure the transmitters and receivers for test measurements.

Table 1-5: Test Commands

Command	Description	Page
!DACGPSCTON	Return CGPS C/N and frequency	172
!DACGPSMASKON	Set CGPS log mask	172
!DACGPSSTANDALONE	Enter/exit Stand Alone RF mode	173
!DACGPSTESTMODE	Start/stop CGPS diagnostic task	173
!DAFTMACT	Put modem into Factory Test Mode	174
!DAFTMDEACT	Put modem into Online Mode from Factory Test Mode	174
!DAGGAVGRSSI	Return averaged RSSI value in dBm (GSM only)	175
!DAGSRXBURST	Set GSM receiver to burst mode (GSM only)	175
!DAGSTXFRAME	Set GSM Tx frame structure (GSM only)	176
!DALGAVGAGC	Return averaged Rx AGC value (LTE only)	177
!DALSNSVAL	Configure LTE Net Sig value (LTE only)	178

Table 1-5: Test Commands (Continued)

Command	Description	Page
!DALSPARANGE	Set LTE PA range (LTE only)	178
!DALSRXBW	Set LTE Rx bandwidth (LTE only)	179
!DALSTXBW	Set LTE Tx bandwidth (LTE only)	179
!DALSTXMOD	Set LTE Tx modulation type (LTE only)	180
!DALSTXPWR	Set LTE Tx power level (LTE only)	181
!DALSWAVEFORM	Set LTE TX waveform (LTE only)	182
!DASBAND	Set frequency band	183
!DASCHAN	Set modem channel (frequency)	185
!DASLNAGAIN	Set LNA gain state	187
!DASPDM	Set PDM value (WCDMA and GSM only)	188
!DASTXOFF	Turn Tx PA off	188
!DASTXON	Turn Tx PA on	189
!DAWGAVGAGC	Return averaged Rx AGC value (WCDMA only)	189
!DAWSPARANGE	Set PA range state machine (WCDMA only)	190
!DAWSSCHAIN	Enable secondary receive chain (WCDMA only)	190
!DAWSTXCW	Set waveform used by the transmitter (WCDMA only)	191
!DAWSTXPWR	Set desired Tx power level (WCDMA mode only)	191
!LDTEST	Test LED (WP8548/WP75xx)	192
!LDTESTOFF	Reset LED to normal mode from test mode	193
!LEDTEST	Test LED (WP76xx/WP77xx)	193

Memory Management Commands—Commands that control the data stored in non-volatile memory of the modem.

Table 1-6: Memory Management Commands

Command	Description	Page
!PARTITION	Display/set partition sizes	195
!RMARESET	Restore device	197

GNSS Commands—Supported on GPS-enabled modems only.

Table 1-7: GPS Commands

Command	Description	Page
!GNSSCONFIG	Configure GNSS satellite constellation support	200
!GNSSDPOMODE	Enable/Disable Dynamic Power Optimization (DPO)	201
!GPSAUTOSTART	Configure GPS auto-start features	202
!GPSCLRASSIST	Clear specific GPS assistance data	203
!GPSCOLDSTART	Clear all GNSS assistance data	204
!GPSEND	End an active session	204
!GPSFIX	Initiate GPS position fix	205
!GPSIDREN	Enable/disable DR_SYNC	206
!GPSLOC	Return last known location of the modem	207
!GPSMTLRSETTINGS	Set/report MT location request settings	208
!GPSNMEASENCE	Set/report NMEA sentence type	209
!GPSSATINFO	Request satellite information	211
!GPSSTATUS	Request current status of a position fix session	212
!GPSSUPLURL	Set/report SUPL server URL	213
!GPSSUPLVER	Set/report SUPL server version	214
!GPSTRACK	Initiate local tracking (multiple fix) session	215
!GPSTRANSSEC	Control GPS transport security	216
!GPSXTRADATAENABLE	Set/report GPS XTRA settings	217
!GPSXTRADATAURL	Set/report GPS XTRA data server URLs	218
!GPSXTRAINITDNLD	Initiate GPS XTRA data download and inject operation	218
!GPSXTRASTATUS	Return current status of XTRA	219
!GPSXTRATIME	Inject GPS or UTC time into XTRA system	220
!GPSXTRATIMEENABLE	Set/report GPS XTRA time settings	221
!GPSXTRATIMEURL	Set/report GPS XTRA SNTP server URLs	222

SIM Commands—Commands used to communicate with an installed SIM.

Table 1-8: SIM Commands

Command	Description	Page
+CCID	Return SIM/eUICC ICCID and EID	226
+CCID (notification)	eUICC profile switch—Unsolicited notification	226

Table 1-8: SIM Commands (Continued)

Command	Description	Page
+CPINR	Display remaining number of SIM unlock retries	227
+CSPN	Display SIM card service provider's name (SPN)	228
!ICCID	Return SIM card's ICCID	228
+KSIMSEL	Select External SIM interface	229
!UIMS	Select active UIM interface	230

OMA-DM Commands—Commands used to configure DM (Device Management) accounts, sessions, and host–device–server interactions.

Table 1-9: OMA-DM Host Device Configuration Commands

Command	Description	Page
!HOSTDEVINFO	Configure host device details	232
!OSINFO	Configure host device operating system information	234

Table 1-10: OMA-DM Commands

Command	Description	Page
!IDSDEBUGPRINT	Enable/disable debug (detailed message) printing	235
!IMSTESTMODE	Enable/disable IMS test mode	235

SAR Backoff Commands—Commands used to configure SAR options.

Table 1-11: SAR Backoff and Thermal Control Commands

Command	Description	Page
+KRFMUTE	Enable/disable RAT-specific Tx muting	237
+KRFMUTE (notification)	RAT Tx mute mode status change (unsolicited notification)	238
!MAXPWR	Set/report maximum Tx power	239
!SARBACKOFF	Set/report offset from maximum Tx power	241
!SARGPIO	Set/report External GPIO controlling SAR	244
!SARINTGPIOMODE	Set/report default pull mode for SAR interrupt GPIOs	245
!SARSTATE	Set/report SAR backoff state	245
!SARSTATEDFLT	Set/report default SAR backoff state	246

Audio Commands—Commands used to configure and manage audio-capable devices.

Table 1-12: Audio Commands

Command	Description	Page
!AVAUDIO	Play/record audio file (.wav format)	248
!AVAUDIOLPBK	Start/stop audio loopback	249
!AVAUDVOL	Set/return audio playback volume	249
!AVCFG	Bind audio profile to device/physical interface	250
!AVCODECMICTXG	Set/return codec Tx path gain	252
!AVDEF	Reset configurable audio parameters to default settings	253
!AVEC	Enable/disable Echo Cancellation mode for audio profile	254
!AVMUTE	Mute/unmute earpiece/microphone/call waiting tone	255
!AVNS	Enable/disable Noise Suppression and Far-end Noise Suppression modes for audio profile	256
!AVSETPROFILE	Select/configure audio profile for CS call	257
!AVSETVOL	Query/set audio profile's Rx volume level	258
!AVTONEPLAY	Play a tone	259
!AVTXVOL	Query/set audio profile's Tx volume gain	260
+CLVL	Set active audio profile's Rx volume	261
+VTD	Set DTMF tone duration	261
+VTS	Send DTMF tone	262

I/O Commands—Commands used to configure and manage GPIOs, ADCs and other I/Os.

Table 1-13: I/O Commands

Command	Description	Page
!GPIOINT	GPIO interrupt detected—Unsolicited notification	264
!MADC	Display ADC values	265
!MCCELL	Enable/disable coin cell charging feature	266
!MVCOIN	Configure coin cell charging	267
!RIOWNER	Set/query Ring Indicator owner	268
+WEXTCLK	Enable/Disable user clock mode	269
+WIOCFG	GPIO Configuration	270
+WIOR	Read GPIO value	272
+WIOV	Write GPIO value	273

Table 1-13: I/O Commands (Continued)

Command	Description	Page
+WRID	Set/query Ring Indicator Duration	273
+WWAKE	Query Wakeup Event	274
+WWAKESET	Set/query Wake Up Event Mask	275

[AirVantage Commands](#)—Commands used to work with AirVantage.

Table 1-14: AirVantage Device Services Commands

Command	Description	Page
+WDSC	Configure AirVantage Management Services	277
+WDSE	Display most recent AirVantage Management Services error	279
+WDSG	Display AirVantage Management Services status information	280
+WDSI	Activate/deactivate AirVantage Management Services unsolicited notifications	281
+WDSR	Reply to AirVantage server request	284
+WDSS	Configure/connect AirVantage Management Services session	285

[SMS Wake Commands](#)—Commands used for the SMS host wake-up feature.

Table 1-15: SMS Wake Commands

Command	Description	Page
!SMSWAKE	Enable/disable SMS host wake-up feature	287
!SMSWAKEWIDTH	Set/read SMS Wake signal width	288

Conventions

The following format conventions are used in this reference:

Character codes or keystrokes that are described with words or standard abbreviations are shown within angle brackets using a different font, such as <CR> for Carriage Return and <space> for a blank space character.

Numeric values are decimal unless prefixed as noted below.

Hexadecimal values are shown with a prefix of 0x, i.e. in the form 0x3D.

Binary values are shown with a prefix of 0b, i.e. in the form 0b00111101.

Command and register syntax is noted using an alternate font: **!CHAN=<c>[.b]**. The leading “AT” characters are not shown but must be included before all commands except as noted in the reference tables.

Characters that are required are shown in uppercase; parameters are noted in lowercase. Required parameters are enclosed in angle brackets (<n>) while optional parameters are enclosed within square brackets ([x]). The brackets are not to be included in the command string.

Commands are presented in table format. Each chapter covers the commands related to that subject and presents a summary table to help locate needed commands. Commands are in ASCII alphabetical order in the body of each chapter.

Any default settings are noted in the command tables. Note that these are the factory default settings and *not* the default parameter value assumed if no parameter is specified.

Result Code This is a numeric or text code that is returned after all commands (except resets)—text codes are returned if verbose responses are enabled. Only one result code is returned for a command line regardless of the number of individual commands contained on the line.

Response This term indicates a response from the modem that is issued prior to a result code. Reading registers or issuing commands that report information will provide a response followed by a result code unless the command generates an error.

Responses and result codes from the modem, or host system software prompts, are shown in this font:

CONNECT 14400

>> 2: AT Password Commands

Introduction

AT commands described in this document are password-protected. This chapter describes how to enter and change the password.

Command summary

[Table 2-1](#) on page 27 lists the commands described in this chapter.

Table 2-1: AT Password Commands

Command	Description	Page
!ENTERCND	Enable access to password-protected commands	28
!SETCND	Set AT command password	29

Command reference

Table 2-2: AT Password Command Details

Command	Description
!ENTERCND	<p>Enable access to password-protected commands</p> <p>Before any password-protected AT commands can be used, !ENTERCND must be used to enter the password to gain access. The initial password is configured onto the modem during manufacture. You can change the password using !SETCND. If you do not know the password, contact your Sierra Wireless account manager.</p> <p>Once the password has been entered correctly, the password-protected AT commands are available until the modem is reset or powered off and on.</p> <p>Password required: Yes—Query format only.</p> <p>Reset required to apply changes: No</p> <p>Persistent across power cycles: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!ENTERCND=<"key"> Response: OK Purpose: Unlock password-protected commands. Query: AT!ENTERCND? Response: <key> (if unlocked) Purpose: This command is password-protected. After entering the password correctly using the execution operation ("="), you can use this command to display the password as a reminder. <p>Parameters:</p> <p><"key"> (Password stored in NV memory)</p> <ul style="list-style-type: none"> Password must be entered with quotation marks. (For example, AT!ENTERCND="ExamplePW".) Length: (WP75xx/WP85xx) 4–10 characters; (WP76xx/WP77xx) 4–15 characters Supported characters: '0'–'9', 'A'–'Z', 'a'–'z', special characters (e.g. "!#\$%&'()*+,-./:;<>=?@") <p>Note: Double quotes (") are not allowed.</p> <ul style="list-style-type: none"> Characters may be entered in ASCII format, or in Hex format. (For example: "myPass3" or "ABCDEF01234".)

Table 2-2: AT Password Command Details (Continued)

Command	Description
!SETCND	<p>Set AT command password</p> <p>Change the password used for the !ENTERCND command. (Before you can change the password using !SETCND, you must enable access to this command using !ENTERCND.)</p> <p>Password required: Yes (see !ENTERCND for details)</p> <p>Reset required to apply changes: No</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!SETCND=<"key"> Response: OK Purpose: Sets <"key"> as the new password for accessing protected commands. <p>Parameters:</p> <p><"key"> (New password)</p> <ul style="list-style-type: none"> Password must be entered with quotation marks (for example, AT!SETCND="NewPW"). Length: (WP75xx/WP85xx) 4–10 characters; (WP76xx/WP77xx) 4–15 characters Supported characters: '0'–'9', 'A'–'Z', 'a'–'z', special characters (e.g. "!"#\$%&'()*+,-./:;<=>=?@") Note: Double quotes (") are not allowed. Characters may be entered in ASCII format, or in Hex format. (For example: "myPass3" or "ABCDEF01234".) <hr/> <p>Warning: Do NOT enter a null password (that is, the <"Key"> cannot be "") — you will NOT be able to use password-protected commands, and will have to contact Sierra Wireless for help to reset the password.</p>

>> 3: Modem Status, Customization, and Reset Commands

Introduction

This chapter describes commands used to reset the modem, adjust customization settings, retrieve the hardware version, and monitor the temperature, voltage, and modem status.

Command summary

Table 3-1 lists the commands described in this chapter.

Table 3-1: Modem Status Commands

Command	Description	Page
!AMR_NB (notification)	Vocoder in use—Unsolicited notification	34
!AMR_WB (notification)	Vocoder in use—Unsolicited notification	34
!ANTSEL	Set/query external antenna select configuration	35
!AVVOCODER (Notification group)	Vocoder in use—Unsolicited notifications	37
!BAND	Select/return frequency band set	38
!BOOTHOLD	Reset modem and wait in bootloader for firmware download	41
+CBST	Select Circuit-Switched Bearer	42
+CEDRXRDP	Read eDRX Dynamic Parameters	43
+CEDRXS	Configure eDRX	44
+CGAUTH	Set/Report PDP connection authentication parameters	45
+CGDCONT	Define PDP context	46
+CMUX	Configure Multiplexing Control Channel	48
+CPSMS	Configure Power Saving Mode (PSM)	50
+CSQ (notification)	RSSI change across threshold—Unsolicited notification	51
!CUSTOM	Set/return customization settings	52
!ATALOOPBACK	Enable/disable and configure loopback mode	58
!EONS (notification)	Enhanced Operator Name String (EONS)—Unsolicited notification	59
!EVRC (notification)	Vocoder in use—Unsolicited notification	59
!EVRC_B (notification)	Vocoder in use—Unsolicited notification	59
!EVRC_NW (notification)	Vocoder in use—Unsolicited notification	59
!EVRC_WB (notification)	Vocoder in use—Unsolicited notification	59

Table 3-1: Modem Status Commands (Continued)

Command	Description	Page
!GETBAND	Return the current active band	59
!GETRAT	Return the current active radio access technology (RAT)	60
!GSM_EFR (notification)	Vocoder in use—Unsolicited notification	60
!GSM_FR (notification)	Vocoder in use—Unsolicited notification	60
!GSM_HR (notification)	Vocoder in use—Unsolicited notification	60
!GSTATUS	Return operational status	61
!IMAGE	Manage Firmware Images	70
!IMPREF	Query/set Image Management preferences	72
+KCELL	Display Detected Cell Details	73
+KMCLASS	Set 2G multislot class	76
+KSLEEP	Configure UART1 power management (sleep mode entry conditions)	77
+KSRAT	Set the current RAT	78
+KSREP	Enable/disable startup reporting	79
+KSUP (notification)	Startup notification (unsolicited notification)	79
!LTEINFO	Display LTE network information	80
!MAPUART	Map services to UART	82
!MCUWATCHDOG	Set/Report MCU Watchdog Parameters	83
!MODE (notification)	Current system mode—Unsolicited notification	84
!MUSLEN	Enable/disable unsolicited messaging feature	84
!NETNUM	Set/report number of supported network interfaces	85
!NI (notification)	Network identity—Unsolicited notification	86
!PACKAGE	Return package version string	86
!PATEMP	Return PA temperature information	87
!PATEMP (notification)	PA temperature state change—Unsolicited notification	87
!PCDEFR (notification)	Deferred shutdown timer expired—Unsolicited notification	88
!PCINFO	Return power control status information	89
!PCOFFEN	Set/return Power Off Enable state	90
!PCTEMP	Return Power control temperature information	91
!PCTEMP (notification)	PA temperature state change—Unsolicited notification	92
!PCTEMPLIMITS	Set/report temperature state limit values	93
!PCVOLT	Return current power supply voltage information	94

Table 3-1: Modem Status Commands (Continued)

Command	Description	Page
!PCVOLT (notification)	PMIC voltage state change—Unsolicited notification	94
!PCVOLTLIMITS	Set/report power supply voltage state limit values	95
!POWERDOWN	Power down system	95
!POWERMODE	Set the module power saving mode	96
!POWERWAKE	Configure ULPS (ULPM/PSM) wakeup sources	99
!PRIID	Report module PRI part number and revision	102
!PRLVER	Display current PRL version	102
!PSCS (notification)	Packet switched data call status—Unsolicited notification	103
*PSRDBS	Select operating bands	104
!QCELP13K (notification)	Vocoder in use—Unsolicited notification	105
!RESET	Reset modem	105
!RI (notification)	Roaming indicator state—Unsolicited notification	105
RING (notification)	Incoming call notification—Unsolicited notification	105
!RSSI (notification)	Signal strength—Unsolicited notification	106
!SCACT	Activate/deactivate data connection	107
!SCUMMTU	Set/Report MTU Size	108
!SECINFO	Display bootloader debug configuration	109
!SELACQ	Select RAT acquisition order	110
!SELCIOT	Set/report Cellular IoT preferences	112
!SELMODE	Set/return current service domain	113
!SELRAT	Set preferred RAT	114
!SELSNR	Set/report LTE-NB1 band scan configuration	116
!SRV (notification)	WWAN network status change—Unsolicited notification	116
!UDINFO	Return information from active USB descriptor	117
!UDPID	Set/report product ID in USB descriptor	118
!UIMREGSTATE (notification)	UIM registration state—Unsolicited notification	118
!UIMSTATUS (notification)	UIM status change—Unsolicited notification	119
!USBCOMP	Set/report USB interface configuration	120
!USBINFO	Return information from active USB descriptor	121
!USBPID	Set/report product ID in USB descriptor	122
+WANS (notification)	Call answered—Unsolicited notification	123

Table 3-1: Modem Status Commands (Continued)

Command	Description	Page
+WCC (notification)	Call control status change—Unsolicited notification	124
+WCNT (notification)	Call connected—Unsolicited notification	125
+WDDI (notification)	DTMF tone detection—Unsolicited notification	126
+WDDM	Enable/disable DTMF detection	126
+WEND (notification)	Call end status—Unsolicited notification	127
+WFWUPD	Download/install firmware package	130
+WFWUPD (notification)	Firmware package install notification	131
+WJAM (notification)	Jamming events—Unsolicited notification	132
+WJAMTHRESH	Set/Report Jamming Detection Threshold Value	133
+WMGF (notification)	SMS memory full—Unsolicited notification	133
+WORG (notification)	Call origination attempt—Unsolicited notification	134
+WRMICN (notification)	Roaming icon—Unsolicited notification (CDMA only)	134
+WUSLMSK	Enable/disable unsolicited notifications	135
+WVMI (notification)	Voicemail received—Unsolicited notification	138

Command reference

Table 3-2: Modem Status Command Details

Command	Description
!AMR_NB (notification)	Vocoder in use—Unsolicited notification See !AVVOCODER on page 37 for details.
!AMR_WB (notification)	Vocoder in use—Unsolicited notification See !AVVOCODER on page 37 for details.

Table 3-2: Modem Status Command Details (Continued)

Command	Description
!ANTSEL	<p>Set/query external antenna select configuration</p> <p>Configure the modem to use GPIOs (GPIO28–31) to select the antenna to use for each specified frequency band. (Any of the available GPIOs that are not needed for a specific band should be configured as not required.)</p> <p>When the modem switches to a frequency band that has been configured using this command, the GPIOs are driven as specified and the host uses them to tune the external antenna appropriately.</p> <p>If the modem switches to a band that has not been configured, the host uses the default antenna.</p> <hr/> <p><i>Note: Frequency bands are RAT-independent. For example, Band 5 corresponds to any 850-band technology (CDMA, WCDMA, LTE, GSM).</i></p> <hr/> <p>Requirements: Before this command can be used:</p> <ul style="list-style-type: none"> Antenna selection is the secondary configuration for GPIO28–GPIO31. To use these GPIOs for antenna selection, use +WIOCFG to deallocate them from their current purpose(s). <p>Notes: When designing the system, and configuring the device:</p> <ul style="list-style-type: none"> Perform system level testing to ensure that the antenna switching feature does not introduce any handover issues. The tunable antenna should be designed to ensure that it can retune in < 5 μs (recommended) and < 10 μs (maximum). <p>Password required: Yes (see !ENTERCND for details)</p> <p>Reset required to apply changes: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!ANTSEL=<band>, <gpio1>, <gpio2>, <gpio3>[, <gpio4>] Response: OK Purpose: Configure the GPIOs for the specified <band>. Query: AT!ANTSEL? Response (WPx5xx): BAND <band a>: <gpio1>, <gpio2>, <gpio3>[, <gpio4>] BAND <band b>: <gpio1>, <gpio2>, <gpio3>[, <gpio4>] ... OK <hr/> <p><i>Note: The WPx5xx response (as of publication date) appears as "ANTSEL <band a>:". This will be corrected to display "BAND <band a>: ..." in a future firmware release.</i></p> <hr/> <p>(Continued on next page)</p>

Table 3-2: Modem Status Command Details (Continued)

Command	Description
!ANTSEL (continued)	<p>Set/query external antenna select configuration (continued)</p> <p>Response (WP76xx/WP77xx):</p> <p>BAND <band a>: <gpio1>, <gpio2>, <gpio3>[, <gpio4>]</p> <p>BAND <band b>: <gpio1>, <gpio2>, <gpio3>[, <gpio4>]</p> <p>...</p> <p>Conflict: <i>(Note: Heading is for LTE-CA conflicts, but WP76xx/WP77xx do not support LTE-CA, so heading can be ignored.)</i></p> <p>OK</p> <p>Example:</p> <p>BAND 2: 1, 0, 1, 1</p> <p>BAND 5: 1, 1, 2, 2</p> <p>Conflict:</p> <p>OK</p> <p>Purpose: Display the current external antenna select configuration.</p> <ul style="list-style-type: none"> Query List: AT!ANTSEL=? <p>Purpose: Display valid execution format and parameter values.</p> <p>Parameters:</p> <p><band> (RF band)</p> <ul style="list-style-type: none"> 3GPP band number. For a full listing of 3GPP band numbers, see Table 17-2 on page 300. Valid range: 1–71. Band support is product specific—see the device’s Product Specification or Product Technical Specification document for details. <p><gpio1>, <gpio2>, <gpio3>, <gpio4> (GPIO configurations)</p> <ul style="list-style-type: none"> 0=Logic low 1=Logic high 2=Not used for antenna selection (Default value for <gpio4>). Notes: <gpio4> availability is device-specific—see the module’s Product Technical Specification for details.

Table 3-2: Modem Status Command Details (Continued)

Command	Description																						
!AVVOCODER (Notification group)	<p>Vocoder in use—Unsolicited notifications</p> <hr/> <p><i>Note: The unsolicited notification string for "Vocoder in use" varies as described in the Notification format and example below. "!AVVOCODER" is a configuration option for +WUSLMSK, which enables these notifications.</i></p> <hr/> <p>Unsolicited notification indicating the codec and speech encoder sampling rate being used for a voice call.</p> <p>To enable !AVVOCODER (and other notifications), use AT+WUSLMSK. Table 3-2: Modem Status Command Details (Continued)

Command	Description
+CPSMS	<p>Configure Power Saving Mode (PSM) Enable/disable and configure the UE's Power Saving Mode parameters.</p> <hr/> <p><i>Note: This implementation of +CPSMS follows 3GPP TS 27.007, with exceptions as noted in the parameter descriptions.</i></p> <hr/> <p>Supporting devices: WP76xx / WP77xx. Not supported by WP8548 / WP75xx. Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT+CPSMS=<mode>[, <Requested_Periodic-RAU>], [<Requested_GPRS-READY-timer>], [<Requested_Periodic-TAU>], [<Requested_Active-Time>] Response: OK or +CME ERROR: <err> Purpose: Enable/disable PSM, and configure PSM settings. Query: AT+CPSMS? Response: +CPSMS: <mode>, [<Requested_Periodic-RAU>], [<Requested_GPRS-READY-timer>], [<Requested_Periodic-TAU>], [<Requested_Active-Time>] OK Purpose: Report current PSM status and settings. Query List: AT+CPSMS=? Purpose: Return the execution command format and the supported parameter values. <p>Parameters:</p> <p><mode> (Enable/Disable PSM)</p> <ul style="list-style-type: none"> 0—Disable PSM 1—Enable PSM <p><Requested_Periodic-RAU> (3G Routing Area Update timer)</p> <ul style="list-style-type: none"> Leave blank, not used by WP76xx / WP77xx <p><Requested_GPRS-READY-timer> (2G timer)</p> <ul style="list-style-type: none"> Leave blank, not used by WP76xx / WP77xx <p><Requested_Periodic-TAU> (TAU timer—Amount of time UE will be dormant before timer wakes it)</p> <ul style="list-style-type: none"> One byte (8 bits) represented as a string. For coding and value range details, refer to the +CPSMS description in 3GPP TS 27.007. Default—"00011000"=4 hours e.g. "01000111" = 70 hours <p><Requested_Active-Time> (Amount of time UE will remain active (idle) before re-entering PSM)</p> <ul style="list-style-type: none"> One byte (8 bits) represented as a string. For coding and value range details, refer to the +CPSMS description in 3GPP TS 27.007. Default—"00001010"=20 seconds e.g. "00100100" = 4 minutes

Table 3-2: Modem Status Command Details (Continued)

Command	Description
+CSQ (notification)	<p>RSSI change across threshold—Unsolicited notification</p> <p>Unsolicited notification indicating the signal strength (<rssi>) has changed. Typically, a !RSSI unsolicited notification will also be received (see !RSSI on page 106).</p> <p>To enable +CSQ (and other notifications), use AT+WUSLMSK. See +WUSLMSK on page 136 for details.</p> <p>Notification format:</p> <p>+CSQ: <rssi>,<ber></p> <p>Examples:</p> <ul style="list-style-type: none"> Notifications received: +CSQ: 20,99 Signal strength (RSSI) -33 dBm, with bit error ration (BER) not known/not detectable <p>Parameters:</p> <p><rssi> (Received Signal Strength Indication offset value)</p> <ul style="list-style-type: none"> Integer value. Each step represents 2 dBm increase from base value 0: -113 dBm or less 1–30: -111 to -53 dBm 31: -51 dBm or greater 99: Not known, or not detectable <p><ber> (Channel Bit Error Rate, in percent)</p> <ul style="list-style-type: none"> Integer value. 0–7: As RXQAL values in the table in 3GPP TS 45.008 subclause 8.2.4 99: Not known, or not detectable

Command	Description
!CUSTOM <hr/> <i>Note: Some customizations may not be available for certain chipsets, firmware revisions, or devices.</i> <hr/>	<p>Set/return customization settings Set or return several customization values. Password required: Yes (Execution only) (see !ENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: ATICUSTOM=<customization>, <value> Response: OK Purpose: Assign <value> to a specific <customization> setting. Query: ATICUSTOM? Response: (list of enabled <customization>s) OK Purpose: Display currently-enabled customizations. Query list: ATICUSTOM=? Purpose: Return a list of valid <customization> values. <p>Parameters: <value> (Value being assigned to a specific <customization> setting)</p> <ul style="list-style-type: none"> Descriptions are included in each of the customizations described below. Numeric value. Valid range depends on the <customization> type. <p><customization> (String identifying customization setting. The default value for all customizations is 0.)</p> <hr/> <p><i>Note: Use quotation marks around the customization string. For example, AT!CUSTOM="CSDOFF",0.</i></p> <hr/> <ul style="list-style-type: none"> "AUTONETWORKMODE"—(WP8548 / WP75xx) Indicate if UE should revert to Automatic Network mode after 60 seconds of Manual Network mode. <value>: <ul style="list-style-type: none"> 0—Remain in Manual. (Default) 1—Revert to Automatic. 2—Remain in Manual if UE is attached to the network, otherwise switch to Automatic. "BANDSELEN"—Select GPIO28–31 usage type. <value>: <ul style="list-style-type: none"> 0—General purpose GPIO 1—Antenna select (with !ANTSEL) "BOOTQUIETDISABLE"—Enable/disable Linux kernel console messages. Disabling non-critical Linux kernel console logging improves the boot time. <value>: <ul style="list-style-type: none"> 0—Disable Linux kernel console messages during boot (Default) 1—Enable all Linux kernel console messages during boot <p>(Continued on next page)</p>

Table 3-2: Modem Status Command Details (Continued)

Command	Description
!CUSTOM (continued)	<p>Set—query customization settings (continued)</p> <ul style="list-style-type: none"> "BOOTUARTDLOADEN"—(WP76xx/WP77xx) Enable/disable firmware download over UART on bootloader. <value>: <ul style="list-style-type: none"> 0—Disable UART download. F/W download over USB only (Default) 1—Enable UART download. F/W download over USB and UART. Bootloader download mode falls back to UART after USB mode timeout. If the "UAUDLOADDISABLE" customization has been used to disable firmware download, this customization is ignored. "CFUNPERSISTEN"—(All WP) Enable/disable persistence (across power cycles) of AT+CFUN setting. <value>: <ul style="list-style-type: none"> 0—Disable (+CFUN setting does not persist across power cycle) Note: If the modem is in P-LPM (persistent low power mode—AT+CFUN mode 0) when this option is used, persistence remains enabled until the modem is put into online mode using an AT or QMI command. 1—Enable (+CFUN setting persists across power cycle) Note: This customization does not affect operating mode persistence set using other interfaces. For example, the QMI interface can still be used to set the operating mode to LPM or P-LPM, even if this customization is disabled. "CSDDISABLE"—Disable/enable CSD call <value>: <ul style="list-style-type: none"> 0—Enable (Default) 1—Disable "DHCPRELAYENABLE"—(WP76xx/WP77xx) Enable/disable DHCP relay feature. <value>: <ul style="list-style-type: none"> 0—Disable (Default). Modem filters DHCP requests into internal DHCP server. 1—Enable. DHCP requests (packets for port 67 with target IP address of DHCP server) go out over the network. "EXTGPSLNAEN"—Enable/disable EXT_GPS_LNA_EN pin <value>: <ul style="list-style-type: none"> 0—Disable 1—(Default) Enable "EXTUIMSWITCHEN"—Enable/disable control of fast SIM switching feature (see +KSIMSEL on page 229 for details) <value>: <ul style="list-style-type: none"> 0—Disable (Default) 1—Enable "FASTENUMEN"—(All WP) Enable/disable fast enumeration for warm/cold boot. <value>: <ul style="list-style-type: none"> 0—Disable fast enumeration (Default) 1—Enable fast enumeration for cold boot and disable for warm boot 2—Enable fast enumeration for warm boot and disable for cold boot 3—Enable fast enumeration for warm and cold boot <p>(Continued on next page)</p>

Table 3-2: Modem Status Command Details (Continued)

Command	Description
!CUSTOM (continued)	<p>Set/query customization settings (continued)</p> <ul style="list-style-type: none"> • "FLOWNOTIDISABLE"—(All WP) Enable/disable QoS QMI notification events. <value>: <ul style="list-style-type: none"> • 0–255 (Default value = 0—all events enabled) <ul style="list-style-type: none"> • Bit 0: Flow activated event (0=Enable, 1=Disable) • Bit 1: Flow modified event (0=Enable, 1=Disable) • Bit 2: n/a • Bit 3: Flow deleted event (0=Enable, 1=Disable) • Bit 4: Flow suspended event (0=Enable, 1=Disable) • Bit 5: Flow enabled event (0=Enable, 1=Disable) • Bit 6: Flow disabled event (0=Enable, 1=Disable) • Bit 7: n/a • "GPIOSENABLE"—(All WP) Indicate whether SAR backoff is controlled by GPIOs or by AT commands. <value>: <ul style="list-style-type: none"> • 0—Controlled by AT commands (default) • 1—Controlled by GPIOs • "GPSENABLE"—(All WP) Enable/disable the GPS feature. <value>: <ul style="list-style-type: none"> • 0—GPS disabled • 1—MO & MT enabled regardless of GPS_DISABLE setting • 2—MO enabled regardless of GPS_DISABLE setting • 3—MT enabled regardless of GPS_DISABLE setting • 4—MO & MT enabled but are gated by GPS_DISABLE setting • 5—MO enabled but is gated by GPS_DISABLE setting • 6—MT enabled but is gated by GPS_DISABLE setting • <value> + 80—Disable GLONASS (For example, 84 = MO & MT narrow-band GPS enabled, but gated by GPS_DISABLE setting.) • "GPSLPM"—(All WP) Enable/disable GPS in Low Power Mode. <value>: <ul style="list-style-type: none"> • 0—Enable. GPS engine remains enabled when modem enters LPM. • 1—Disable. GPS engine is disabled when modem enters LPM. • "GPSREFLOC"—(WP8548/WP75xx) Enable/disable reference GPS location reporting. <value>: <ul style="list-style-type: none"> • 0—Enable (Default) • 1—Disable • "HARDCODEDIPEN"—(WP8548/WP75xx) Enable/disable hard-coded IP. <value>: <ul style="list-style-type: none"> • 0—Disable hard-coded IP (Default) • 1—Enable hard-coded IP <p>(Continued on next page)</p>

Table 3-2: Modem Status Command Details (Continued)

Command	Description
!CUSTOM (continued)	<p>Set/query customization settings (continued)</p> <ul style="list-style-type: none"> • "HSICENABLE"—(All WP) Enable/disable HSIC interface <value>: <ul style="list-style-type: none"> • 0—Disable HSIC host (Default) • 1—Enable HSIC host • "ICMPINTSRVDIS"—(WP76xx/WP77xx) Enable/disable internal ICMP service. (When enabled, modem can reply to Ping requests in an LTE attached state, without a host or embedded data connection.) <value>: <ul style="list-style-type: none"> • 0—Enable IPv4/IPv6 ICMP service • 1—Disable IPv4 ICMP service • 2—Reserved for future use • 3—Disable IPv4/IPv6 ICMP service • "IMCONFIG"—(WP76xx/WP77xx) Image switching configuration <value>: <ul style="list-style-type: none"> • 0—On device (Default) • 1—On host • 255—Disable all IM features • "IPCHANNELRATEEN"—(All WP) Enable/disable calculation of IP channel rates (Rx and Tx) <value>: <ul style="list-style-type: none"> • 0—Disable (Default) • 1—Enable • "IPV6ENABLE"—(WP76xx/WP77xx) Enable/disable IPv6 support <value>: <ul style="list-style-type: none"> • 0—Disable • 1—Enable • "JAMENABLE"—(WP8548/WP75xx) Enable/disable JAM detection. <value>: <ul style="list-style-type: none"> • 0—Disable (Default) • 1—Enable • "LTECOEXUARTENABLE"—(WP76xx) Enable/disable Wi-Fi/LTE Coexistence <value>: <ul style="list-style-type: none"> • 0—Disable (Default) • 1—Enable feature (used on GPIO35 if configured using +WIOCFG) • NOTE: This feature cannot be used with UART1 DSR pin. • "LTEREJDELAY"—(WP8548/WP75xx) Set delay before LTE attach requests are sent after TAU or service request rejection. <value>: <ul style="list-style-type: none"> • 0–255—Delay in 10 msec units. (e.g. 10=100 msec) • Actual range is 0–2.55 sec • Delay is cancelled if RRC connection is released early. • Suggested value (if delay is being enabled) is 50 (500 msec). Adjust the value as necessary based on testing. <p>(Continued on next page)</p>

Command	Description
+WJAM (notification)	<p>Jamming events—Unsolicited notification</p> <p>Unsolicited notification received for various jamming events.</p> <p>To enable +WJAM (and other notifications), use AT+WUSLMSK. See +WUSLMSK on page 136 for details.</p> <p>Notification format:</p> <p>+WJAM: <response type>,<jam status>]</p> <p>Examples:</p> <ul style="list-style-type: none"> +WJAM: 0,2 <i>Intermediate report, possible jammer detected</i> +WJAM: 1,1 <i>Final result, no jamming detected</i> <p>Parameters:</p> <p><response type> (Response type)</p> <ul style="list-style-type: none"> 0—Final 1—Intermediate <hr/> <p><i>Note: If <response_type> = 0 (Final), the <jam status> value can only be 1 (Null) or 5 (Jammed).</i></p> <hr/> <p><jam status> (Jamming status)</p> <ul style="list-style-type: none"> 0—Unknown. Status is unknown. 1—Null. No jamming suspicion; radio environment is considered normal. 2—Low. Low probability that the device is jammed, but some radio environment parameters are considered abnormal. 3—Medium. Medium probability that the device is jammed; a lot of interference in the radio spectrum. 4—High. High probability that the device is jammed; radio environment is considered jammed, but there is still a possibility that the module succeeds in synchronizing a cell. 5—Jammed. Module is jammed; cell synchronization impossible while sufficient power level is detected on a large number of frequencies.

Table 3-2: Modem Status Command Details (Continued)

Command	Description
+WJAMTHRESH	<p>Set/Report Jamming Detection Threshold Value</p> <p>Set or report (display) the jamming detection threshold values for supported modes.</p> <p><i>Note:</i> For details on unsolicited jamming notifications received in response to jamming events, see +WJAM on page 132 for details.</p> <p>Supporting devices: WP76xx</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT+WJAMTHRESH=<mode>,<threshold> Response: OK Purpose: Set the jamming threshold value for the specified <mode>. • Query: AT+WJAMTHRESH? Response: +WJAMTHRESH: <mode>,<threshold> ... OK Purpose: Display all configured jamming threshold values. • Query List: AT+WJAMTHRESH=? Purpose: Return the execution command format and the supported parameter values. <p>Parameters:</p> <p><mode> (Radio Access Technology (RAT))</p> <ul style="list-style-type: none"> • 0—GSM • 1—UMTS • 2—CDMA • 3—LTE <p><threshold> (Jamming threshold value)</p> <ul style="list-style-type: none"> • Supported range is <mode>-dependent. • Value corresponds to RSSI value (e.g. '45' represents "-45 dBm") • GSM: 0–63 • UMTS: 0–70 • CDMA: 0–125 • LTE: 0–125
+WMGF (notification)	<p>SMS memory full—Unsolicited notification</p> <p>Unsolicited notification received when the SMS Service Center has tried to send an SMS message to the module, but the message was rejected because the SMS memory storage on the module is full. (The Service Center will attempt to resend the message to the module at a later time.)</p> <p>No new SMS messages will be received until old messages are deleted from storage using AT+CMGD.</p> <p>To enable +WMGF (and other notifications), use AT+WUSLMSK. See +WUSLMSK on page 136 for details.</p> <p>Notification format:</p> <p>+WMGF</p> <p>Parameters:</p> <p>None</p>

Table 3-2: Modem Status Command Details (Continued)

Command	Description
+WORG (notification)	<p>Call origination attempt—Unsolicited notification</p> <p>Unsolicited notification received when an attempt is made to establish a voice or data call. To enable +WORG (and other notifications), use AT+WUSLMSK. See +WUSLMSK on page 136 for details.</p> <p>Notification format: +WORG: <dialing_string></p> <p>Examples:</p> <ul style="list-style-type: none"> Call originated using ATD18005551212: Notifications received: +WORG: 18005551212 +WCNT: 0,0 PDP activation by the network after CS fallback (CSFB): Notifications received: +WORG: *98# <p>Parameters: <dialing_string> (Dialing string sent to the base station)</p> <ul style="list-style-type: none"> Format: ASCII string Valid characters: '0'..'9', + * #
+WRMICN (notification)	<p>Roaming icon—Unsolicited notification (CDMA only)</p> <p>Unsolicited notification received for call control status notifications (CDMA devices only).</p> <p>Notification format: +WRMICN: <mode>,<icon>]</p> <p>Examples:</p> <ul style="list-style-type: none"> +WRMICN: 0,0 1xRTT network, home icon (not roaming) +WRMICN: 1,2 EVDO network, roam icon on, blinking (affiliated network) <p>Parameters: <mode> (Current RAT)</p> <ul style="list-style-type: none"> 0—1xRTT 1—EVDO <p><icon> (Roaming icon type)</p> <ul style="list-style-type: none"> 0—Home 1—Roam icon ON (affiliated network) 2—Roam icon Blink (foreign network)

Table 3-2: Modem Status Command Details (Continued)

Command	Description
+WUSLMSK	<p>Enable/disable unsolicited notifications</p> <p>Enable or disable unsolicited notifications. When enabled, unsolicited notifications are output to the AT port when specific events occur.</p> <p>By default, unsolicited notifications are disabled.</p> <p>Password required: No</p> <p>Reset required to apply changes: No</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT+WUSLMSK=<bitmask>,<mask_position> Response: OK Purpose: Enable or disable the selected notifications (in <bitmask>) defined in the specified 32-bit <mask_position>. • Query: AT+WUSLMSK? Response: +WUSLMSK: <bitmask><mask_position> OK Purpose: Report current state of system mode indications (enabled/disabled), showing the upper 32-bit mask followed by the lower 32-bit mask. Example: +WUSLMSK: 00002B0E710241D0 OK (The upper mask is 00002B0E, and lower mask is 710241D0.) • Query List: AT+WUSLMSK=? Purpose: Return the execution command format. See the parameter descriptions below for details. <p>Parameters:</p> <p><bitmask> (Unsolicited notifications bit mask, applied to the specified 32-bit <mask_position>)</p> <ul style="list-style-type: none"> • Bit mask indicating which notifications to enable/disable. • Range: 00000000–FFFFFFFF. For example: <ul style="list-style-type: none"> • 00000000=All bits off (Default value) • FFFFFFFF=All bits on • Any other combination=Combination of bits off and on • See LOWER unsolicited notifications mask on page 136 and UPPER unsolicited notifications mask on page 137 for supported messages <p><mask_position> (The 32-bit mask of notifications that the <bitmask> is to be applied to.)</p> <ul style="list-style-type: none"> • 0=Lower 32-bit mask • 1=Upper 32-bit mask <p>(Continued on next page)</p>

Command	Description
+WVMI (notification)	Voicemail received—Unsolicited notification Unsolicited notification that indicates a voicemail has been received. To enable +WVMI (and other notifications), use AT+WUSLMSK. See +WUSLMSK on page 136 for details. Notification format: +WVMI: <count>] Parameters: <count> (Number of messages stored in voicemail system) <ul style="list-style-type: none">Valid range: 0–n

>> 4: SIM Toolkit Commands

Introduction

This chapter describes commands and notifications used to enable the AT Interface's SIM toolkit support, and receive and respond to unsolicited SIM command notifications.

Note: SIM toolkit commands are available only if the feature is enabled via AT!CUSTOM="STKUIEN",2).

Command summary

Table 4-1 lists the commands described in this chapter.

Table 4-1: SIM Toolkit Commands

Command	Description	Page
*PSSTKI	Configure AT interface's SIM toolkit support	140
!STKC	Report last unsolicited proactive SIM command notification	141
!STKC (notification)	Unsolicited proactive SIM command notification	142
!STKCR	Respond to proactive SIM command	143
!STKGC	Get (retrieve) data for last unsolicited proactive SIM command notification	148
!STKMS	Inform SIM of menu item selection or provide help information	160
!STKN (notification)	Response to mobile-originated Call or SMS control request (notification)	161
!STKPD	Select host-supported STK features	163

Command reference

Table 4-2: SIM Toolkit Command Details

Command	Description
*PSSTKI	<p>Configure AT interface's SIM toolkit support</p> <p>Configure the AT interface's support (interaction method with terminal equipment (TE)) for SIM Toolkit.</p> <p>Supporting devices: WP76xx/WP77xx. Not supported by WP8548/WP75xx.</p> <p>Password required: No</p> <p>Reset required to apply changes: No</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT*PSSTKI=<mode> Response: OK Purpose: Configure the AT interface's STK support to the specified <mode>. • Query: AT*PSSTKI? Response: *PSSTKI: <mode> OK Purpose: Display the AT interface's current <mode> for STK support. • Query List: AT*PSSTKI=? Purpose: Return the execution command format. See the parameter descriptions below for details. <p>Parameters:</p> <p><mode> (AT interface's STK support mode)</p> <ul style="list-style-type: none"> • 0—STK not supported. Module does not send unsolicited result codes to TE, and TE does not send STK AT command to module. • 1—Manual mode. Module sends URCs to TE, and TE must acknowledge proactive command notification to continue • 2—Auto-acknowledge mode. Module responds to STK without TE. Any URCs are sent to TE. • 3 (Default)—Auto-acknowledge mode. Module responds without sending URC to the TE. • NOTE: Modes 2 and 3 are used only for the following STK proactive commands that require user interaction: <ul style="list-style-type: none"> • Commands that require Yes/No responses: <ul style="list-style-type: none"> • SEND SMS • SEND SS • SEND USSD • SEND DTMF • SET UP CALL • SET UP MENU • Commands that require MMI (man-machine interaction) and Yes/No responses when complete: <ul style="list-style-type: none"> • SET UP IDLE MODE TEXT • DISPLAY TEXT • For BIP (Bearer Independent Protocol) feature: <ul style="list-style-type: none"> • OPEN CHANNEL

Table 4-2: SIM Toolkit Command Details (Continued)

Command	Description
!STKC	<p>Report last unsolicited proactive SIM command notification</p> <p>Display the most recent unsolicited proactive SIM command notification (!STKC (notification) on page 142).</p> <p>All notifications (except where <cmdId> is "01" or "81") require a response to be sent using AT!STKCR on page 143.</p> <p>Supporting devices: WP76xx/WP77xx. Not supported by WP8548/WP75xx.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Query: AT!STKC? Response: [Outstanding Proactive Command: <cmdId>] OK Purpose: Display the most recent unsolicited !STKC notification. If none, return only "OK". <p>Parameters:</p> <p><cmdId> (Unique ID of proactive SIM command)</p> <ul style="list-style-type: none"> Note: This is the full set of supported <cmdId> types. >> 5: Diagnostic Commands

Introduction

This chapter describes commands used to diagnose modem problems.

Command summary

The table below lists the commands described in this chapter.

Table 5-1: Diagnostic Commands

Command	Description	Page
!BCFWUPDATESTATUS	Report status of most recent firmware update attempt	166
!ERR	Display/clear diagnostic information	167
!GCCLR	Clear crash dump data	167
!GCDUMP	Display crash dump data	167
!RXDEN	Enable/disable WCDMA/LTE receive diversity	168

Command reference

Table 5-2: Diagnostic Command Details

Command	Description
!BCFWUPDATESTATUS	<p>Report status of most recent firmware update attempt</p> <p>Return the status of the most recent firmware update attempt made since the last cold restart.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!BCFWUPDATESTATUS Response: !BCFWUPDATESTATUS: <result> or !BCFWUPDATESTATUS: <result> Failed IMG TYPE <type>, DATA <data>, PART <part> OK Purpose: Return the status of the most recent firmware update attempt. The second response format appears only if <result> = "FAILED". <p>Parameters:</p> <p><result> (Status of last firmware update attempt)</p> <ul style="list-style-type: none"> ASCII string: <ul style="list-style-type: none"> "UNKNOWN"—Status of last attempt is unknown. "SUCCESS"—Last update was successful. "FAILED"—Last update failed. <p><type> (Firmware image type that failed to update)</p> <ul style="list-style-type: none"> ASCII string <p><data> (Reference data for failed image)</p> <ul style="list-style-type: none"> Location of the reference data as an offset in the CWE image Valid range: 0–(2³²–1) <p><part> (Partition associated with the failed image)</p> <ul style="list-style-type: none"> ASCII string

Table 5-2: Diagnostic Command Details (Continued)

Command	Description
!ERR	<p>Display/clear diagnostic information</p> <p>This command is used to display or clear diagnostic information (logged error conditions) that Sierra Wireless uses to assist in resolving technical issues.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!ERR=0 Response: OK Purpose: Clear the logged error conditions. Use this command before running tests to make sure that details displayed using AT!ERR are relevant to the tests being performed. Query: AT!ERR Response: 00 [F] <count> <file> <line> ... nn [F] <count> <file> <line> OK Purpose: Return all logged error conditions that are stored in NVRAM. <p>Parameters:</p> <p><count> (Number of occurrences)</p> <ul style="list-style-type: none"> Valid range: 0x00–0xFF <p><file> (Log file name)</p> <ul style="list-style-type: none"> Name of log file using ASCII characters <p><line> (Line number in log file)</p> <ul style="list-style-type: none"> Valid range: 1–99999
!GCCLR	<p>Clear crash dump data</p> <p>Clear crash dump data.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!GCCLR Response: Crash data cleared OK Purpose: Clear crash dump data. <p>Parameters:</p> <p>None</p>
!GCDUMP	<p>Display crash dump data</p> <p>Display crash dump data.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!GCDUMP Response: (crash dump data) OK or No crash data available OK Purpose: Display crash dump data.

Table 5-2: Diagnostic Command Details (Continued)

Command	Description
!RXDEN	<p>Enable/disable WCDMA/LTE receive diversity</p> <p>Enable or disable WCDMA/LTE receive diversity, or (for testing purposes only) establish receive diversity as the primary path. The new state takes effect the next time the modem is reset.</p> <hr/> <p><i>Note: To change from <state=0> to <state=2> (or from <state=2> to <state=0>, you must issue AT!RXDEN=1, reset the modem, and then make the final state change.</i></p> <hr/> <p>Password required: Yes—Execution format only Reset required to apply changes: Yes Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!RXDEN=<state> Response: OK Purpose: Set the current receive diversity state. • Query: AT!RXDEN? Response: !RXDEN: <state> OK Purpose: Return the current receive diversity <state>. • Query List: AT!RXDEN=? Purpose: Return a list of available <state> values to use in this command. <p>Parameters:</p> <p><state> (Current/ requested receive diversity state)</p> <ul style="list-style-type: none"> • 0 = Rx diversity disabled • 1 = Rx diversity enabled • 2 = Rx diversity as primary path FOR TESTING PURPOSES ONLY. (The diversity path cannot be used to transmit data in an actual deployment.)

>> 6: Test Commands

Introduction

To obtain regulatory approval and carrier approvals for your product, you may be required to perform tests on the radio component of the embedded modem. This chapter describes AT commands used to perform those tests.

Warning: *These commands are intended for use by developers, not end-users. The commands should be used only in a controlled network environment.*

In most cases the modem must be in a particular mode before you can issue the AT commands to perform particular tests. Therefore, the order in which you issue certain commands is important. Three AT commands are important in setting the mode:

- **!DAFTMACT**—puts the modem in factory test mode (a non-signaling mode). You must issue **AT!DAFTMACT** before issuing any other command that starts with “!DA”.
- **!DASBAND**—selects the frequency band.
- **!DASCHAN**—selects the channel. This command must be run after you have selected the band with **!DASBAND**. (If you don’t select a channel, the modem uses a default.)

Command summary

The table below lists the commands described in this chapter.

Table 6-1: Test Commands

Command	Description	Page
!DACGPSCTON	Return CGPS C/N and frequency	172
!DACGPSMASKON	Set CGPS log mask	172
!DACGPSSTANDALONE	Enter/exit Stand Alone RF mode	173
!DACGPSTESTMODE	Start/stop CGPS diagnostic task	173
!DAFTMACT	Put modem into Factory Test Mode	174
!DAFTMDEACT	Put modem into Online Mode from Factory Test Mode	174
!DAGGAVGRSSI	Return averaged RSSI value in dBm (GSM only)	175
!DAGSRXBURST	Set GSM receiver to burst mode (GSM only)	175
!DAGSTXFRAME	Set GSM Tx frame structure (GSM only)	176
!DALGAVGAGC	Return averaged Rx AGC value (LTE only)	177
!DALSNSVAL	Configure LTE Net Sig value (LTE only)	178
!DALSPARANGE	Set LTE PA range (LTE only)	178
!DALSRXBW	Set LTE Rx bandwidth (LTE only)	179
!DALSTXBW	Set LTE Tx bandwidth (LTE only)	179
!DALSTXMOD	Set LTE Tx modulation type (LTE only)	180
!DALSTXPWR	Set LTE Tx power level (LTE only)	181
!DALSWAVEFORM	Set LTE TX waveform (LTE only)	182
!DASBAND	Set frequency band	183
!DASCHAN	Set modem channel (frequency)	185
!DASLNAGAIN	Set LNA gain state	187
!DASPDM	Set PDM value (WCDMA and GSM only)	188
!DASTXOFF	Turn Tx PA off	188
!DASTXON	Turn Tx PA on	189
!DAWGAVGAGC	Return averaged Rx AGC value (WCDMA only)	189
!DAWSPARANGE	Set PA range state machine (WCDMA only)	190
!DAWSSCHAIN	Enable secondary receive chain (WCDMA only)	190
!DAWSTXCW	Set waveform used by the transmitter (WCDMA only)	191
!DAWSTXPWR	Set desired Tx power level (WCDMA mode only)	191

Table 6-1: Test Commands (Continued)

Command	Description	Page
!LDTEST	Test LED (WP8548/WP75xx)	192
!LDTESTOFF	Reset LED to normal mode from test mode	193
!LEDTEST	Test LED (WP76xx/WP77xx)	193

Command reference

Table 6-2: Test Command Details

Command	Description
!DACGPSCTON	<p>Return CGPS C/N and frequency</p> <p>Return the CGPS C/N (signal strength) and frequency measurement.</p> <p>Requirements:</p> <p>Before this command can be used:</p> <ul style="list-style-type: none"> Use !DACGPSTESTMODE=1 to start the CGPS diagnostic task Use !DACGPSSTANDALONE=1 to enter standalone RF mode Use !DACGPSMASKON to enable the CGPS log mask <p>Password required: Yes (see !ENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!DACGPSCTON Response: CtoN=<CtoN>,Freq=<freq> OK Purpose: Return the current CGPS signal strength and frequency. <p>Parameters:</p> <p><CtoN> (Signal strength)</p> <ul style="list-style-type: none"> 0.0–99.0—Signal strength calculated in 0.1 dBHz. <p><freq> (Frequency offset)</p> <ul style="list-style-type: none"> 0–4294967295—Frequency offset in Hz.
!DACGPSMASKON	<p>Set CGPS log mask</p> <p>Set the CGPS IQ log mask.</p> <p>Password required: Yes (see !ENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!DACGPSMASKON Response: <logmask> OK Purpose: Set the log mask. <p>Parameters:</p> <p><logmask> (CGPS IQ log mask)</p> <ul style="list-style-type: none"> 288-character hexadecimal string The <logmask> is the raw data returned by the Qualcomm GPS Diag module. This value does not affect the GPS test and can be ignored.

Table 6-2: Test Command Details (Continued)

Command	Description
!DACGPSSTANDALONE	<p>Enter/exit Stand Alone RF mode Enter or exit stand alone (SA) RF mode.</p> <p>Requirements: Before this command can be used:</p> <ul style="list-style-type: none"> Use IDACGPSTESTMODE=1 to start the CGPS diagnostic task. <p>Password required: Yes (see !ENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!DACGPSSTANDALONE=<state> Response: <status> OK <i>or</i> ERROR Purpose: Enter or exit Stand Alone RF mode. <p>Parameters:</p> <p><state> (Requested SA RF mode)</p> <ul style="list-style-type: none"> 0—Exit 1—Enter <p><status> (Return value indicating requested <state> change)</p> <ul style="list-style-type: none"> Appears only if <state> change is successful. 4B0D65001400—Successfully changed state.
!DACGPSTESTMODE	<p>Start/stop CGPS diagnostic task Start or stop the CGPS diagnostic task. This command allows the GNSS engine to be tested without obtaining a GNSS position fix.</p> <p>Password required: Yes (see !ENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!DACGPSTESTMODE=<mode> Response: <status> OK <i>or</i> ERROR Purpose: Start or stop the CGPS diagnostic task. <p>Parameters:</p> <p><mode> (Start/stop CGPS diagnostic task)</p> <ul style="list-style-type: none"> 0—Stop 1—Start <p><status> (Return value indicating requested <mode> change)</p> <ul style="list-style-type: none"> Appears only if <mode> change is successful. 4B0D0800—Successfully started the CGPS diagnostic task 4B0D0C00—Successfully stopped the CGPS diagnostic task

Table 6-2: Test Command Details (Continued)

Command	Description
!DAFTMACT	<p>Put modem into Factory Test Mode</p> <p>Place the modem in FTM (Factory Test Mode). FTM is a non-signaling mode that allows the radio component to be manually configured to conduct certain types of tests. The modem must be in FTM mode to use the test commands described in this chapter (except for commands that start with "IDACGPS")</p> <hr/> <p><i>Note: When this command executes successfully, the modem responds with the value 290300. Any other response indicates an error.</i></p> <hr/> <p>Password required: Yes (see IENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!DAFTMACT Response: 290300 (Success. Any other response indicates an error.) OK Purpose: Place modem in FTM mode (from online mode)
!DAFTMDEACT	<p>Put modem into Online Mode from Factory Test Mode</p> <p>Take the modem out of FTM and put it back into online mode. >> 7: Memory Management Commands

Introduction

The modem uses non-volatile memory to store:

- Factory calibration data
- Settings made in a host application such as Skylight.

The commands in this chapter allow you to back up and restore the data in non-volatile memory.

Command summary

The table below lists the commands described in this chapter:

Table 7-1: Memory Management Commands

Command	Description	Page
!PARTITION	Display/set partition sizes	195
!RMARESET	Restore device	197

Command reference

Table 7-2: Memory Management Command Details

Command	Description																																			
!PARTITION	Display/set partition sizes Display or modify the sizes of application processor partitions.																																			
	Important: <i>By default, this command is not available. It is only available as a factory (SKU-level) configuration.</i> <i>If the module was factory-configured with this command available, it is strongly recommended to either:</i> <ul style="list-style-type: none">• <i>Disable the command when it is no longer needed (via AT!PARTITION=disable), or</i>• <i>Set a unique password (!SETCND on page 29) to prevent unapproved access to protected commands (including !PARTITION).</i>																																			
	Supporting devices: WP76xx																																			
	Password required: Yes																																			
	Reset required to apply changes: Yes																																			
	Usage: <ul style="list-style-type: none">• Execution (Set): AT!PARTITION=<name>,<size0>[,<size1>[,<size2>[...]]]																																			
	Response: Partitions to be updated: <table><tr><td>PART</td><td>BLOCK</td><td>SIZE</td><td>NEW</td></tr><tr><td>NAME</td><td>OFFSET</td><td>(KB)</td><td>SIZE</td></tr><tr><td colspan="4">[list of partitions]</td></tr></table>	PART	BLOCK	SIZE	NEW	NAME	OFFSET	(KB)	SIZE	[list of partitions]																										
	PART	BLOCK	SIZE	NEW																																
	NAME	OFFSET	(KB)	SIZE																																
	[list of partitions]																																			
Purpose: OK For the specified partition (<name>), set the partition size (<size0>) and optionally set the sizes of one or more subsequent partitions. Recommendation—Before resizing the partitions, make sure to use AT!PARTITION? and record the current sizes in case you need to reset them.																																				
Example: AT!PARTITION=0:LEFWKRO,16000 Partitions to be updated: <table><tr><td>PART</td><td>BLOCK</td><td>SIZE</td><td>NEW</td></tr><tr><td>NAME</td><td>OFFSET</td><td>(KB)</td><td>SIZE</td></tr><tr><td>0:aboot</td><td></td><td>1024</td><td>1024</td></tr><tr><td>0:boot</td><td></td><td>15360</td><td>15360</td></tr><tr><td>0:system</td><td></td><td>30720</td><td>30720</td></tr><tr><td>0:LEFWKRO</td><td></td><td>8960</td><td>16128 *</td></tr><tr><td>0:SWIRW</td><td></td><td>25600</td><td>25600 *</td></tr><tr><td>0:USERAPP</td><td></td><td>134144</td><td>134144 *</td></tr><tr><td>0:RESERVED</td><td></td><td>55808</td><td>48640 *</td></tr></table> NOTE: partitions marked with '**' will be erased on partition change If these numbers look not OK, run the command again. Otherwise run AT!RESET to apply the changes	PART	BLOCK	SIZE	NEW	NAME	OFFSET	(KB)	SIZE	0:aboot		1024	1024	0:boot		15360	15360	0:system		30720	30720	0:LEFWKRO		8960	16128 *	0:SWIRW		25600	25600 *	0:USERAPP		134144	134144 *	0:RESERVED		55808	48640 *

Command	Description
!RMARESET	Restore device Command details for WP75xx/WP85xx: Restore the device to its original provisioned (OEM default) state, or to the original state plus activation and Sprint-related settings. <hr/> <i>Note: The module reboots automatically with the restored settings.</i> <hr/> Password required: Yes (see !ENTERCND for details) Usage: <ul style="list-style-type: none"> Execution: AT!RMARESET=<category> Response: !RMARESET: <category> RESET OK Purpose: Restore device to the requested state. Parameters: <category> (Restoration type) <ul style="list-style-type: none"> OEM=Default OEM provisioned state RTN=OEM provisioned state plus activation and Sprint-related settings
	Command details for WP76xx/WP77xx: Restore the device to its original provisioned (OEM default) state, or to the latest backed-up state. <hr/> <i>Note: The module does not reboot automatically. It must be manually rebooted to use the restored settings.</i> <hr/> Password required: Yes (see !ENTERCND for details) Usage: <ul style="list-style-type: none"> Execution: AT!RMARESET=<level> Response: !RMARESET: DEVICE REBOOT REQUIRED Items Restored: ##### Items Deleted: ##### Items Defaulted: ##### Items Skipped: ##### OK Purpose: Restore device to the requested state. Parameters: <level> (Restoration type) <ul style="list-style-type: none"> 1=Default OEM provisioned state 3=Latest backed-up state

>> 8: GNSS Commands

Introduction

This chapter describes commands used to access GNSS functionality in supporting modules.

When using these commands, the following considerations apply:

- GNSS is typically enabled by default; however, it may be disabled by default for some SKUs. If so, enable GNSS using **AT!CUSTOM="GPSENABLE"**
- If supported by the modem, XTRA is enabled (over the NDIS interface) by default when GPS is enabled, and it generates data traffic.

Command summary

The table below lists the commands described in this chapter.

Table 8-1: GPS Commands

Command	Description	Page
!GNSSCONFIG	Configure GNSS satellite constellation support	200
!GNSSDPOMODE	Enable/Disable Dynamic Power Optimization (DPO)	201
!GPSAUTOSTART	Configure GPS auto-start features	202
!GPSCLRASSIST	Clear specific GPS assistance data	203
!GPSCOLDSTART	Clear all GNSS assistance data	204
!GPSEND	End an active session	204
!GPSFIX	Initiate GPS position fix	205
!GPSIDREN	Enable/disable DR_SYNC	206
!GPSLOC	Return last known location of the modem	207
!GPSMOMETHOD	Return last known location of the modem	207
!GPSNMEASENCE	Set/report NMEA sentence type	209
!GPSSATINFO	Request satellite information	211
!GPSSTATUS	Request current status of a position fix session	212
!GPSSUPLURL	Set/report SUPL server URL	213
!GPSSUPLVER	Set/report SUPL server version	214
!GPSTRACK	Initiate local tracking (multiple fix) session	215
!GPSTRANSSEC	Control GPS transport security	216
!GPSXTRADATAENABLE	Set/report GPS XTRA settings	217
!GPSXTRADATAURL	Set/report GPS XTRA data server URLs	218

Table 8-1: GPS Commands (Continued)

Command	Description	Page
!GPSXTRAINITDNLD	Initiate GPS XTRA data download and inject operation	218
!GPSXTRASTATUS	Return current status of XTRA	219
!GPSXTRATIME	Inject GPS or UTC time into XTRA system	220
!GPSXTRATIMEENABLE	Set/report GPS XTRA time settings	221
!GPSXTRATIMEURL	Set/report GPS XTRA SNTP server URLs	222

Command reference

Table 8-2: GPS Command Details

Command	Description
!GNSSCONFIG	<p>Configure GNSS satellite constellation support Configure GNSS engine to support various GNSS satellite systems.</p> <p>Supporting devices: WP76xx / WP77xx. Not supported by WP8548 / WP75xx.</p> <p>Password required: No Reset required to apply changes: Yes Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!GNSSCONFIG=<GPS>,<GLO>,<BDS>,<GAL>,<QZS> Response: OK Purpose: Enable or disable satellite systems. Query: AT!GNSSCONFIG? Response: GPS: <GPS> GLONASS: <GLO> BDS: <BDS> GAL: <GAL> QZSS: <QZS> OK Purpose: Display state of each satellite system (enabled/disabled). Query List: AT!GNSSCONFIG=? Purpose: Return the expected command format. <p>Parameters:</p> <p><GPS> (GPS satellite system state)</p> <ul style="list-style-type: none"> 1—Enable Note: GPS support cannot be disabled. <p><GLO> (GLONASS satellite system state)</p> <ul style="list-style-type: none"> 0—Disable 1—Enable <p><BDS> (Beidou satellite system state)</p> <ul style="list-style-type: none"> 0—Disable 1—Enable worldwide 2—Enable outside US <p><GAL> (Galileo satellite system state)</p> <ul style="list-style-type: none"> 0—Disable 1—Enable worldwide 2—Enable outside U.S. <p><QZS> (Quasi-Zenith satellite system state)</p> <ul style="list-style-type: none"> 0—Disable. QZSS satellites will not be used in GNSS position fix calculation. However, they are still tracked for the purpose of cross-correlation detection and mitigation. 1—Enable worldwide 2—Enable outside U.S.

Table 8-2: GPS Command Details (Continued)

Command	Description
!GNSSDPOMODE	<p>Enable/Disable Dynamic Power Optimization (DPO) Enable or disable dynamic power optimization (DPO).</p> <p>Supporting devices: WP76xx/WP77xx</p> <p>Requirements:</p> <ul style="list-style-type: none"> Before DPO can be enabled, AT!GPSIDREN=0 must be used to disable DR_SYNC. <p>Password required: Yes Reset required to apply changes: Yes Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!GNSSDPOMODE=<state> Response: OK Purpose: Enable or disable DPO. Query: AT!GNSSDPOMODE? Response: !GNSSDPOMODE: <state> OK Purpose: Display state of each satellite system (enabled/disabled). Query List: AT!GNSSDPOMODE=? Purpose: Return the expected command format. <p>Parameters:</p> <p><state> (DPO mode state)</p> <ul style="list-style-type: none"> 0—Disable 1—Enable

Table 8-2: GPS Command Details (Continued)

Command	Description
!GPSCLRASSIST	<p>Clear specific GPS assistance data</p> <p>Clear one or more types of assistance data from the modem. This forces a cold start for GPS acquisition the next time a session starts.</p> <p>Note:</p> <ul style="list-style-type: none"> • AT!GPSCLRASSIST=1,1,1,1,1 is equivalent to !GPS COLDSTART. • (WP76xx/WP77xx only) AT!GPSCLRASSIST=0,0,0,0,0 is a special case that leaves GPS assistance data untouched, but clears the last fix data. <p>Requirements:</p> <ul style="list-style-type: none"> • Device must not have an active GPS session (the GPS receiver is off and no position fix is being calculated). <p>Password required: Yes (see !ENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!GPSCLRASSIST=<eph>, <alm>, <pos>, <time>, <iono> Response: OK or Command ignored OK • Purpose: Clear each assistance data type that is flagged as '1'. • Query List: AT!GPSCLRASSIST=? Purpose: Return the expected command format and supported values. <p>Parameters:</p> <p><eph> (Ephemeris assistance data)</p> <ul style="list-style-type: none"> • 0=Ignore (Do not clear the ephemeris assistance data) • 1=Clear this assistance data type—Clears GPS, GLONASS, and SBAS ephemeris assistance data. <p><alm> (Almanac assistance data)</p> <ul style="list-style-type: none"> • 0=Ignore (Do not clear the almanac assistance data) • 1=Clear this assistance data type—Clears GPS, GLONASS, and SBAS almanac assistance data. <p><pos> (Position assistance data)</p> <ul style="list-style-type: none"> • 0=Ignore (Do not clear the position assistance data) • 1=Clear this assistance data type <p><time> (Time reference)</p> <ul style="list-style-type: none"> • 0=Ignore (Do not clear the time reference) • 1=Clear the time reference <p><iono> (Ionosphere assistance data)</p> <ul style="list-style-type: none"> • 0=Ignore (Do not clear the ionosphere assistance data) • 1=Clear this assistance data type

Table 8-2: GPS Command Details (Continued)

Command	Description
!GPSCOLDSTART	<p>Clear all GNSS assistance data</p> <p>Clear all GNSS assistance details from the modem and put the modem into a coldstart state. Data cleared includes Almanac, Ephemeris, Previous Position, Ionosphere, and GPS time. This forces a cold start for GPS acquisition the next time a session starts.</p> <p>Requirements:</p> <ul style="list-style-type: none"> Device must not have an active GPS session (the GPS receiver is off and no position fix is being calculated). <p>Password required: Yes (see !ENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!GPSCOLDSTART Response: OK Purpose: Clear the modem's GPS details <p>Parameters:</p> <p>None</p>
!GPSEND	<p>End an active session</p> <p>End an active position fix session.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!GPSEND=<sessType> Response: ERRCODE = <value> OK <i>or</i> OK Purpose: End the current session. <p>Parameters:</p> <p><sessType> (Type of session to end)</p> <ul style="list-style-type: none"> 0—Position fix session <p><value> (Error code returned when command fails for any reason)</p> <ul style="list-style-type: none"> See Table 8-3 on page 222 for a list of possible error codes.

Table 8-2: GPS Command Details (Continued)

Command	Description
!GPSFIX	<p>Initiate GPS position fix Initiate a GPS position fix.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!GPSFIX=<fixType>, <maxTime>, <maxDist> Response: OK or ERROR CODE = <value> OK • Purpose: Initiate a time-limited position fix with a specified accuracy. • Query List: AT!GPSFIX=? Purpose: Return supported <fixType>, <maxTime>, and <maxDist> values. <p>Parameters:</p> <p><fixType> (Type of fix to establish)</p> <ul style="list-style-type: none"> • 1—Standalone (not supported by a mobile station) • 2—MS-based only • 3—MS-assisted only <p><maxTime> (Maximum time to wait for a position fix)</p> <ul style="list-style-type: none"> • Valid range: 1–255 seconds <p><maxDist> (Requested accuracy of fix)</p> <ul style="list-style-type: none"> • Entered in decimal format • Valid range: <ul style="list-style-type: none"> • 1–4294967279 meters • 4294967280—No preference <p><value> (Error code returned when command fails for any reason)</p> <ul style="list-style-type: none"> • See Table 8-3 on page 222 for a list of possible error codes. <p>Example(s): AT!GPSFIX=1, 15, 10 requests a standalone position fix to 10 meters accuracy. The request will fail (timeout) if the modem cannot determine a position fix within 15 seconds.</p> <p>Related commands:</p> <ul style="list-style-type: none"> • !GPSSTATUS (page 212)—Use this command while the tracking session is in progress. • !GPSLOC (page 207)—Use this command after the session completes to obtain the result.

Table 8-2: GPS Command Details (Continued)

Command	Description
!GPSIDREN	<p>Enable/disable DR_SYNC</p> <p>Enable or disable DR_SYNC.</p> <p>(DR_SYNC must be disabled before dynamic power optimization (DPO) can be enabled using !GNSSDPOMODE.)</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none">• Execution: AT!GPSIDREN=<switch> Response: OK or ERROR OK Purpose: Enable or disable DR_SYNC.• Query: AT!GPSIDREN? Response: !GPSIDREN: <switch> Purpose: Return current state of DR_SYNC.• Query List: AT!GPSIDREN=? Purpose: Return supported <switch> values. <p>Parameters:</p> <p><switch> (DR_SYNC state)</p> <ul style="list-style-type: none">• 0—Disabled• 1—Enabled

Table 8-2: GPS Command Details (Continued)

Command	Description
!GPSLOC	<p>Return last known location of the modem</p> <p>Return the details obtained during the most recent position location session, if available.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Query: AT!GPSLOC? Response: Unknown (<i>No information is available</i>) OK or Not Available (<i>No information is available</i>) OK or Lat: <latitude> Lon: <longitude> Time: <time> LocUncAngle: <luAngle> LocUncA: <luA> LocUncP: <luP> HEPE: <hepe> <fixType> Altitude: <altitude> LocUncVe: <luV> Heading: <heading> VelHoriz: <vH> VelVert: <vV> OK (<i>Altitude and heading only appear if data was collected as part of the most recent fix.</i>) <p>Purpose: Return last position location details.</p> <p>Parameters:</p> <p><latitude> (Latitude at last position fix)</p> <ul style="list-style-type: none"> Example: "49 Deg 10 Min 21.49 Sec N (0x008BDE6C)" <p><longitude> (Longitude at last position fix)</p> <ul style="list-style-type: none"> Example: "123 Deg 4 Min 14.76 Sec W (0xFE1EE9A)" <p><time> (Time at which last position fix was taken)</p> <ul style="list-style-type: none"> Example: "2009 01 30 4 20:27:18 (GPS)" <p><luAngle> (Location uncertainty angle of returned position)</p> <ul style="list-style-type: none"> Example: "11.2 deg" <p><luA> (Standard deviation of axis along <luAngle>)</p> <ul style="list-style-type: none"> Example: "6.0 m" <p><luP> (Standard deviation of axis perpendicular to <luAngle>)</p> <ul style="list-style-type: none"> Example: "6.0 m" <p><hepe> (Horizontal Estimated Positional Error)</p> <ul style="list-style-type: none"> Example: "8.485 m" <p><fixType> (2D or 3D fix)</p> <ul style="list-style-type: none"> Example: "2D Fix" or "3D Fix" <p><altitude> (Altitude in meters at which last position fix was taken)</p> <ul style="list-style-type: none"> Only present if <fixType> is 3D Example: "-1 m" <p><luV> (Vertical uncertainty in meters)</p> <ul style="list-style-type: none"> Only present if <fixType> is 3D Example: "3.0 m" <p>(Continued on next page)</p>

Table 8-2: GPS Command Details (Continued)

Command	Description
!GPSLOC (continued)	Return last known location of the modem (continued) <heading> (Direction of MS) <ul style="list-style-type: none"> Example: "0.0 deg" <vH> (Horizontal velocity) <ul style="list-style-type: none"> Example: "0.0 m/s" <vV> (Vertical velocity) <ul style="list-style-type: none"> Example: "0.0 m/s"
!GPSMTLRSETTINGS	Set/report MT location request settings Set or report the current MT (mobile-terminated) Location Request settings, which control how the UE responds to network-initiated notifications. Password required: Yes Reset required to apply changes: Yes Persistent across power cycles: Yes Usage: <ul style="list-style-type: none"> Execution: AT!GPSMTLRSETTINGS=<response> Response: OK or ERROR Purpose: Indicate how MT location request will be handled. Query: AT!GPSMTLRSETTINGS? Response: Notification Response Setting: <response> OK Purpose: Return the current <response> setting. Query List: AT!GPSMTLRSETTINGS=? Purpose: Return valid <response> values. Parameters: <response> (Notification response setting) <ul style="list-style-type: none"> 0=Default setting as defined in <i>3GPP specification 29.002</i>, 'NotificationToM-SUser' enumeration. 1=Accept all MT location requests. 2=Reject all MT location requests. 3=Verify all—User will be asked to accept or reject every MT location request.

Command	Description
!GPSXTRATIMEENABLE	<p>Set/report GPS XTRA time settings</p> <p>Enable or disable XTRA time information, and set or report specific XTRA time settings.</p> <p>Password required: Yes (see !ENTERCND for details)</p> <p>Reset required to apply changes: Yes</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!GPSXTRATIMEENABLE=<enable> [<thresh>, <delay>] Response: OK or ERROR Purpose: Enable or disable time information. If enabled, sets the uncertainty threshold and delay time to retry with a backup server. • Query: AT!GPSXTRATIMEENABLE? Response: XTRA Time Info Enabled: <enable> XTRA Time Uncertainty Threshold: <thresh> XTRA Time Delay Threshold: <delay> Purpose: Return the current values of GPS XTRA time parameters. • Query List: AT!GPSXTRATIMEENABLE=? Purpose: Return supported execution parameter values. <p>Parameters:</p> <p><enable> (Enable or disable XTRA time information)</p> <ul style="list-style-type: none"> • 0=Disable. To fully disable XTRA, you must also call !GPSXTRADATAENABLE=0 to disable XTRA data information. • 1=Reserved • 2=Enable XTRA time information <p><thresh> (XTRA time uncertainty threshold, in ms)</p> <ul style="list-style-type: none"> • Valid range: 100–30000 <p><delay> (Time to delay before retrying with backup server, in ms)</p> <ul style="list-style-type: none"> • Valid range: 100–10000

Table 8-2: GPS Command Details (Continued)

Command	Description
!GPSXTRATIMEURL	<p>Set/report GPS XTRA SNTP server URLs</p> <p>Set or report the URLs of up to three GPS XTRA SNTP (Simple Network Time Protocol) servers.</p> <p>Password required: Yes (see !ENTERCND for details)</p> <p>Reset required to apply changes: Yes</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!GPSXTRATIMEURL=<urlIndex>,<url> Response: OK or ERROR Purpose: Set the URL used for the primary, secondary, or tertiary data server. • Query: AT!GPSXTRATIMEURL? Response: XTRA SNTP Primary Server: <url 1> XTRA SNTP Secondary Server: <url 2> XTRA SNTP Tertiary Server: <url 3> Purpose: Return the URLs of the primary, secondary, and tertiary SNTP servers. <p>Parameters:</p> <p><urlIndex> (Server index)</p> <ul style="list-style-type: none"> • 1=Primary server • 2=Secondary server • 3=Tertiary server <p><url> (Server URL)</p> <ul style="list-style-type: none"> • URL string includes quotes • Example: "xtra1.gpsoneextra.net" • Maximum string length=128 characters

Error codes

[Table 8-3](#) describes error codes that can be returned by [IGPSEND](#) ([page 204](#)), [IGPSSTATUS](#) ([page 212](#)), and [IGPSTRACK](#) ([page 215](#)).

[Table 8-4](#) on [page 223](#) describes error codes that can be returned by [!GPSFIX](#) ([page 205](#)).

Table 8-3: AT Command Error Codes (!GPSEND, !GPSSTATUS, !GPSTRACK)

Error code	Description
0	Phone is offline
1	No service
2	No connection with PDE (Position Determining Entity)
3	No data available
4	Session Manager is busy
5	Reserved
6	Phone is GPS-locked

Table 8-3: AT Command Error Codes (!GPSEND, !GPSSTATUS, !GPSTRACK) (Continued)

Error code	Description
7	Connection failure with PDE
8	Session ended because of error condition
9	User ended the session
10	End key pressed from UI
11	Network session was ended
12	Timeout (for GPS search)
13	Conflicting request for session and level of privacy
14	Could not connect to the network
15	Error in fix
16	Reject from PDE
17	GPS is disabled
18	Ending session due to E911 call
19	Server error
20	Reserved
21	Reserved
22	Unknown system error
23	Unsupported service
24	Subscription violation
25	Desired fix method failed
26	Reserved
27	No fix reported because no Tx confirmation was received
28	Network indicated normal end of session
29	No error specified by the network
30	No resources left on the network
31	Position server not available
32	Network reported an unsupported version of protocol

Table 8-4: AT Command Error Codes (!GPSFIX)

Error code	Description
0	No error
1	Invalid client ID

Table 8-4: AT Command Error Codes (!GPSFIX) (Continued)

Error code	Description
2	Bad service parameter
3	Bad session type parameter
4	Incorrect privacy parameter
5	Incorrect download parameter
6	Incorrect network access parameter
7	Incorrect operation parameter
8	Incorrect number of fixes parameter
9	Incorrect server information parameter
10	Error in timeout parameter
11	Error in QOS accuracy threshold parameter
12	No active session to terminate
13	Session is active
14	Session is busy
15	Phone is offline
16	Phone is CDMA locked
17	GPS is locked
18	Command is invalid in current state
19	Connection failure with PDE
20	PDSM command buffer unavailable to queue command
21	Search communication problem
22	Temporary problem reporting position determination results
23	Error mode not supported
24	Periodic NI in progress
25	Unknown error
26	Unknown error

>> 9: SIM Commands

Introduction

This chapter describes commands used to communicate with an installed SIM.

Command summary

[Table 9-1](#) lists the commands described in this chapter:

Table 9-1: SIM Commands

Command	Description	Page
+CCID	Return SIM/eUICC ICCID and EID	226
+CCID (notification)	eUICC profile switch—Unsolicited notification	226
+CPINR	Display remaining number of SIM unlock retries	227
+CSPN	Display SIM card service provider's name (SPN)	228
!ICCID	Return SIM card's ICCID	228
+KSIMSEL	Select External SIM interface	229
!UIMS	Select active UIM interface	230

Command reference

Table 9-2: SIM Command Details

Command	Description
+CCID	<p>Return SIM/eUICC ICCID and EID</p> <p>Return the active SIM's ICCID and (if it is an eUICC) its EID, and enable/disable unsolicited notifications of eUICC profile switches.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT+CCID=<notifications> Response: +CCID: <iccid>[,<eid>] OK Purpose: Enable/disable unsolicited notifications for eUICC profile switches. Query: AT+CCID? or AT+CCID Response: +CCID: <iccid>[,<eid>] OK or +CME ERROR: <error> Purpose: Display the ICCID of the active SIM and, if the SIM is an eUICC, display its EID (eUICC-ID). <p>Parameters:</p> <p><notifications> (Unsolicited notifications):</p> <ul style="list-style-type: none"> 0—Disable eUICC profile switch unsolicited notifications 1—Enable eUICC profile switch unsolicited notifications (default) See +CCID (notification) on page 226 for details. <p><iccid> (ICCID of the SIM/eUICC currently being tested):</p> <ul style="list-style-type: none"> 20 digit decimal number—This number is often printed on the SIM card. <p><eid> (eUICC ID):</p> <ul style="list-style-type: none"> Appears in response only if SIM is an eUICC 32 digit decimal number
+CCID (notification)	<p>eUICC profile switch—Unsolicited notification</p> <p>Unsolicited notification indicating the eUICC profile has been switched.</p> <p>To enable/disable this notification, use AT+CCID. See +CCID on page 226 for details.</p> <p>Notification format:</p> <p>+CCID: <new_iccid></p> <p>Examples:</p> <ul style="list-style-type: none"> Notifications received: +CCID: 89019990001234567026 ICCID of the new profile <p>Parameters:</p> <p><new_iccid> (ICCID of the new profile)</p> <ul style="list-style-type: none"> 20 digit decimal number—This number is often printed on the SIM card.

Table 9-2: SIM Command Details (Continued)

Command	Description
+CPINR	<p>Display remaining number of SIM unlock retries</p> <p>Display the number of remaining SIM unlock retries.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT+CPINR=<CPIN TYPE> Response: +CPINR: <CPIN TYPE>,<remaining> OK Purpose: Display the number of remaining retries for the specified PIN/PUK type. Execution: AT+CPINR Response: +CPINR: SIM PIN,<remaining> +CPINR: SIM PUK,<remaining> +CPINR: SIM PIN2,<remaining> +CPINR: SIM PUK2,<remaining> +CPINR: PH-FSIM PIN,<remaining> +CPINR: PH-NET PIN,<remaining> +CPINR: PH-NETSUB PIN,<remaining> +CPINR: PH-SP PIN,<remaining> +CPINR: PH-CORP PIN,<remaining> +CPINR: PH-FSIM PUK,<remaining> +CPINR: PH-NET PUK,<remaining> +CPINR: PH-NETSUB PUK,<remaining> +CPINR: PH-SP PUK,<remaining> +CPINR: PH-CORP PUK,<remaining> OK Purpose: Display the number of remaining retries for all PIN/PUK types. <p>Parameters:</p> <p><CPIN TYPE> (PIN/PUK type):</p> <ul style="list-style-type: none"> ASCII string enclosed within quotes. Example values: (Available types are device-dependent. Use AT+CPINR to display the list of types available for your device.) <ul style="list-style-type: none"> "SIM PIN" "SIM PUK" "SIM PIN2" "SIM PUK2" "PH-FSIM PIN" "PH-NET PIN" "PH-NETSUB PIN" "PH-SP PIN" "PH-CORP PIN" "PH-FSIM PUK" "PH-NET PUK" "PH-NETSUB PUK" "PH-SP PUK" "PH-CORP PUK" <p><remaining> (Number of retries remaining for specified PIN/PUK type)</p> <ul style="list-style-type: none"> 0–255 (maximum value is type-dependent)

Table 9-2: SIM Command Details (Continued)

Command	Description
+CSPN	<p>Display SIM card service provider's name (SPN) Display the service provider name for the SIM card.</p> <p>Supporting devices: WP76xx / WP77xx. Not supported by WP8548 / WP75xx. Password required: No</p> <p>Usage: (Note: Execution and Query formats return the same response.)</p> <ul style="list-style-type: none"> Execution: AT+CSPN Response: +CSPN: <spn> OK or +ERROR Purpose: Display the SIM card's service provider name. Query: AT+CSPN? Response: +CSPN: <spn> OK or +ERROR Purpose: Display the SIM card's service provider name. Query List: AT+CSPN=? Response: OK Purpose: None. <p>Parameters: <spn> (Service provider name):</p> <ul style="list-style-type: none"> ASCII string enclosed within quotes.
!ICCID	<p>Return SIM card's ICCID Return a SIM's ICCID (Integrated Circuit Card ID).</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Query: AT!ICCID? Response: !ICCID: <iccid> OK Purpose: Display the ICCID. <p>Parameters: <iccid> (ICCID of the SIM currently being tested):</p> <ul style="list-style-type: none"> 20 digit decimal number—This number is often printed on the SIM card.

Table 9-2: SIM Command Details (Continued)

Command	Description
+KSIMSEL	<p>Select External SIM interface</p> <p>Enable/disable selection of an external SIM via GPIO6. This command is for use with hardware designs with an external SIM multiplexer connected to the WP module's UIM1 interface.</p> <p>Password required: No</p> <p>Reset required to apply changes: No</p> <p>Persistent across power cycles: Yes</p> <p>Requirements:</p> <ul style="list-style-type: none"> The fast SIM switch feature must be enabled using the !CUSTOM EXTUIMSWITCHEN customization before +KSIMSEL can be used. See !CUSTOM on page 52. <p>Notes:</p> <ul style="list-style-type: none"> The !CUSTOM UIMDETPULL customization can be used to control the UIM detect lines for UIM1 (external SIM) and UIM2 (WPx5xx) external SIM; (WP76/WP77) eSIM). To use this customization, you must have enabled hot swap for the desired slot(s) using the HOTSWAPDIS customization. (By default, hot swap is not enabled, so default pull settings are used.) See !CUSTOM on page 52 for details on both customizations. <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT+KSIMSEL=<sim_slot> Response: OK Purpose: Set the active external SIM interface. Query: AT+KSIMSEL? Response: +KSIMSEL: <sim_slot> OK Purpose: Indicate the active external SIM interface. Query list: AT+KSIMSEL=? Purpose: Return a list of supported <sim_slot> values. <p>Parameters:</p> <p><sim_slot> (External SIM being used)</p> <ul style="list-style-type: none"> 0—(Query only) External SIM select feature disabled. This value is returned when the !CUSTOM EXTUIMSWITCHEN customization is 0. 1—External SIM slot 1 (GPIO6 low) 2—External SIM slot 2 (GPIO6 high)

Table 9-2: SIM Command Details (Continued)

Command	Description
!UIMS	<p>Select active UIM interface</p> <p>On a module that supports multiple UIM interfaces, select the active UIM interface.</p> <p>Password required: No</p> <p>Persistent across power cycles: Yes, unless overridden by !CUSTOM="UIMAUTOSWITCH", which, when enabled, sets the preferred UIM interface when the module boots.</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!UIMS=<uim> Response: OK Purpose: Configure the module to use the selected UIM interface. • Query: AT!UIMS? Response: !UIMS: <uim>[,<used uim>] OK Purpose: Display the currently selected interface. • Query List: AT!UIMS=? Purpose: Return the command format and the supported parameter values. <p>Parameters:</p> <p><uim> (SIM interface):</p> <ul style="list-style-type: none"> • 0—UIM1. External UIM interface #1 • 1—UIM2: <ul style="list-style-type: none"> • (WPx5xx) External UIM interface #2 • (WP76xx/WP77xx) eSIM (embedded SIM) • 2—Reserved. Do not use. • 3—Auto-SIM-Switch activated. Refer to !CUSTOM="UIMAUTOSWITCH" for details. <p><used uim> (UIM slot used when Auto-SIM-Switch is activated):</p> <ul style="list-style-type: none"> • 0—UIM1. External UIM interface #1 • 1—UIM2: <ul style="list-style-type: none"> • (WPx5xx) External UIM interface #2 • (WP76xx/WP77xx) eSIM (embedded SIM)

>> 10: OMA-DM Commands

Introduction

Note: The commands in this chapter are provided to satisfy AT&T carrier requirements.

This chapter describes commands used to configure DM (Device Management) accounts, sessions, and host-device-server interactions.

Command summary

The table below lists the commands described in this chapter.

Table 10-1: OMA-DM Host Device Configuration Commands

Command	Description	Page
!HOSTDEVINFO	Configure host device details	232
!OSINFO	Configure host device operating system information	234

Table 10-2: OMA-DM Commands

Command	Description	Page
!IDSDEBUGPRINT	Enable/disable debug (detailed message) printing	235
!IMSTESTMODE	Enable/disable IMS test mode	235

Command reference

Table 10-3: OMA-DM Host Device Configuration Command Details

Command	Description
!HOSTDEVINFO	<p>Configure host device details</p> <p>Configure the host device details that will be reported by OMA DM for AT&T devices, to comply with AT&T <CDR-DVM-4532> requirement.</p> <p>To configure host device operating system information, see !OSINFO on page 234.</p> <p>Notes:</p> <ul style="list-style-type: none"> In the Execution format, if a parameter is not entered then the value on the device does not change. In the Query format, the labels in the response are all 7 characters plus a colon (e.g. there is a space in "HostID :"). <p>Password required: Yes (Execution format only) (see !ENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!HOSTDEVINFO=[<instance>],["<Manufacturer>"], ["<Model>"], ["<SW_Version>"], ["<Host_ID>"]] Response: OK or ERROR Purpose: Set some or all host device detail parameters for the specified instance (instance 0 by default if not specified). Query: AT!HOSTDEVINFO? [<instance>] Response: HostMan: <Manufacturer> HostMod: <Model> HostSwV: <SW_Version> HostID : <Host_ID> OK Purpose: Display current host device details for the specified instance (instance 0 by default if not specified). Query List: AT!HOSTDEVINFO=? Purpose: Display the execution command format and parameter values. <p>Parameters:</p> <p><instance></p> <ul style="list-style-type: none"> 0–1 Default: 0 <p><Manufacturer> (Host device manufacturer's name)</p> <ul style="list-style-type: none"> 256 characters maximum <p><Model> (Host device model name)</p> <ul style="list-style-type: none"> 256 characters maximum <p><SW_Version> (Host software version)</p> <ul style="list-style-type: none"> 256 characters maximum <p><Host_ID> (Host ID)</p> <ul style="list-style-type: none"> 256 characters maximum <p>(Continued on next page)</p>

Table 10-3: OMA-DM Host Device Configuration Command Details (Continued)

Command	Description
!HOSTDEVINFO (continued)	Configure host device details (continued) Example(s): <ul style="list-style-type: none">• AT!HOSTDEVINFO=0,"HMAN0" This sets the <Manufacturer> for instance 0. All other parameters keep their current values.• AT!HOSTDEVINFO=1,"HMAN1" This sets the <Manufacturer> for instance 1. All other parameters keep their current values.• AT!HOSTDEVINFO=3,"HMAN1" This returns ERROR due to invalid <instance>. Nothing changes.• AT!HOSTDEVINFO="HMAN0",,"1.0", This sets the <Manufacturer> and <SW_Version> for instance 0. The <Model> and <Host_ID> values keep their current values.

Table 10-3: OMA-DM Host Device Configuration Command Details (Continued)

Command	Description
!OSINFO	<p>Configure host device operating system information</p> <p>Configure the host device operating system name and version that will be reported by OMA DM for AT&T devices, to comply with AT&T <CDR-DVM-4533> requirement. To configure host device details, see !HOSTDEVINFO on page 232.</p> <hr/> <p><i>Note: In the Execution format, if a parameter is blank then the value on the device does not change.</i></p> <hr/> <p>Password required: Yes (Execution format only) (see !ENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!OSINFO="<osname>","<osversion>"] or AT!OSINFO=["<osname>"], "<osversion>" Response: OK or ERROR Purpose: Set host device operating system information parameters. Query: AT!OSINFO? Response: OSName: <osname> OSVersion: <osversion> OK Purpose: Display current host device operating system information. Query List: AT!OSINFO=? Purpose: Display the execution command format and parameter values. <p>Parameters:</p> <p><osname> (Host device operating system name)</p> <ul style="list-style-type: none"> 256 characters maximum Quotation marks are required around the <osname> Note: If <osname> is blank, the current value remains unchanged. <p><osversion> (Host device operating system version)</p> <ul style="list-style-type: none"> 256 characters maximum Quotation marks are required around the <osversion> Note: If <osversion> is blank, the current value remains unchanged. <p>Example(s):</p> <ul style="list-style-type: none"> AT!OSINFO="An OS Name","1.0" This sets both parameters. AT!OSINFO="An OS Name" Only the <osname> is changed. AT!OSINFO=,"1.0" Only the <osversion> is changed.

Table 10-4: OMA-DM Command Details

Command	Description
!IDSDEBUGPRINT	<p>Enable/disable debug (detailed message) printing</p> <p>Enable/disable the printing of all transmitted and received HTTP traffic to the AT command port during a session with a DM server (typically for debugging purposes).</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!IDSDEBUGPRINT=<enable> Response: OK or ERROR Purpose: Enable or disable printing of HTTP traffic to AT the AT command port. • Query List: AT!IDSDEBUGPRINT=? Purpose: Display the execution command format and parameter values. <p>Parameters:</p> <p><enable> (Enable/disable debug printing)</p> <ul style="list-style-type: none"> • 0—Disable debug printing to AT command port • 1—Enable debug printing to AT command port
!IMSTESTMODE	<p>Enable/disable IMS test mode</p> <p>Enable/disable IMS (IP Multimedia Subsystem) test mode.</p> <p>If IMS test mode is enabled:</p> <ul style="list-style-type: none"> • IMS registration attempts will not occur • SMS over IMS is not supported <p>Password required: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!IMSTESTMODE=<mode> Response: OK Purpose: Enable/disable IMS test mode. • Query: AT!IMSTESTMODE? Response: IMS Test Mode Enabled or IMS Test Mode Disabled Purpose: Return the current state of IMS Test Mode. <p>Parameters:</p> <p><mode> (IMS Test Mode state)</p> <ul style="list-style-type: none"> • 0=Disable • 1=Enable

>> 11: SAR Backoff Commands

Introduction

This chapter describes:

- SAR-related commands (Specific Absorption Rate)—SAR commands are used to meet regulatory requirements for the OEM host device by managing the modem's SAR backoff state. OEMs should carefully evaluate their use of these commands and their impact on device operation.

Note: Operators may require OEMs to disclose SAR settings and theory of operation for applicable certifications.

Command summary

The table below lists the commands described in this chapter.

Table 11-1: SAR Backoff and Thermal Control Commands

Command	Description	Page
+KRFMUTE	Enable/disable RAT-specific Tx muting	237
+KRFMUTE (notification)	RAT Tx mute mode status change (unsolicited notification)	238
!MAXPWR	Set/report maximum Tx power	239
!SARBACKOFF	Set/report offset from maximum Tx power	241
!SARGPIO	Set/report External GPIO controlling SAR	244
!SARINTGPIOMODE	Set/report default pull mode for SAR interrupt GPIOs	245
!SARSTATE	Set/report SAR backoff state	245
!SARSTATEDFLT	Set/report default SAR backoff state	246

Command reference

Table 11-2: SAR Backoff and Thermal Control Command Details

Command	Description
+KRFMUTE	<p>Enable/disable RAT-specific Tx muting</p> <p>Enable or disable RF Tx muting a combination of RATs for a specific duration, and enable/disable unsolicited notifications for this command.</p> <p>If enabled, unsolicited notifications (+KRFMUTE (notification)) will be received when:</p> <ul style="list-style-type: none"> The mute duration is enabled or expired. This command is used to disable RF Tx muting while Tx muting is in progress (that is, sometime during the mute duration). <p>Supporting devices: WP76xx/WP77xx. Not supported by WP8548/WP75xx.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT+KRFMUTE=<mode>[,<duration>[,<indication>]] Response: OK Purpose: Enable or disable Tx muting for the RATs specified by the <mode>. Query: AT+KRFMUTE? Response: +KRFMUTE: <mode>,<duration>,<indication> OK Purpose: Display the current RF Tx mute state. Query list: AT+KRFMUTE=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><mode> (RF mute mode)</p> <ul style="list-style-type: none"> 0 (Default)—Disable 1—Mute GSM only 2—Mute UMTS only 3—Mute GSM and UMTS 4—Mute LTE only 5—Mute GSM and LTE 6—Mute UMTS and LTE 7—Mute GSM, UMTS, and LTE <p><duration> (Mute duration in seconds)</p> <ul style="list-style-type: none"> 0.5—120 Default: 30.0 <p><indication> (Enable/disable mute mode unsolicited notifications)</p> <ul style="list-style-type: none"> 0 (Default)—Disable 1—Enable

Table 11-2: SAR Backoff and Thermal Control Command Details (Continued)

Command	Description
+KRFMUTE (notification)	<p>RAT Tx mute mode status change (unsolicited notification)</p> <p>Notification received when RAT Tx mute mode is enabled, expires, or is disabled while in progress.</p> <hr/> <p><i>Note: This notification is enabled/disabled using +KRFMUTE.</i></p> <hr/> <p>Supporting devices: WP76xx / WP77xx. Not supported by WP8548 / WP75xx.</p> <p>Usage:</p> <ul style="list-style-type: none"> Notification: +KRFMUTE: <mode>[,<duration>] Purpose: Indicates RAT Tx muting has begun (been enabled) or stopped (mute period expired, or muting disabled). <p>Parameters:</p> <p><mode> (RF mute mode)</p> <ul style="list-style-type: none"> 0 (Default)—Disable 1—Mute GSM only 2—Mute UMTS only 3—Mute GSM and UMTS 4—Mute LTE only 5—Mute GSM and LTE 6—Mute UMTS and LTE 7—Mute GSM, UMTS, and LTE <p><duration> (Mute duration in seconds)</p> <ul style="list-style-type: none"> 0.5—120 This parameter is included when mute is enabled. If mute is disabled/expired, this parameter does not appear. <p>Examples:</p> <ul style="list-style-type: none"> Notification received when RAT Tx mute is set to Enabled: +KRFMUTE: 1, 30.0 Notification received when RAT Tx mute is expired, or is disabled while in progress: +KRFMUTE: 0

Table 11-2: SAR Backoff and Thermal Control Command Details (Continued)

Command	Description
!MAXPWR	<p>Set/report maximum Tx power Set or report the maximum Tx power for a specific technology/band combination.</p> <hr/> <p>Caution: Any adjustments of Tx power may impact regulatory certification of the module in the host platform. The OEM is responsible for ensuring that the final module configuration in the host platform meets all regulatory requirements.</p> <hr/> <p>Warning: (WP8548/WP75xx devices only) To prevent incorrect SAR backoff values from being used, any time !MAXPWR is used to change the max Tx power for a specific technology/band combination, !SARBACKOFF must then be used to update all previously defined SAR backoff values for the same technology/band combination. Failure to adhere to this warning can result in erroneous SAR backoff values for that particular technology/band combination.</p> <hr/> <p><i>Note:</i> Increasing Tx power affects the module's current consumption and thermal performance.</p> <hr/> <p>Password required: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution (WCDMA/LTE): AT!MAXPWR=<band>,<tech>,<max_tx_pwr> Response: OK Purpose: Set the maximum Tx power for the specified technology/band combination. Execution (CDMA): AT!MAXPWR=<band>,<tech>,<temperature_bin>,<max_tx_pwr> Response: OK Purpose: Set the maximum Tx power for the specified technology/band/temperature bin combination. Query (WCDMA/LTE): AT!MAXPWR?<band>,<tech> Response: <max_tx_pwr> dBm OK Purpose: Indicate the maximum Tx power for the specified technology/band combination. Query (CDMA): AT!MAXPWR?<band>,<tech> Response: Max Tx value for temperature bin 0 = <Max Tx power> dBm ... Max Tx value for temperature bin 7 = <Max Tx power> dBm OK Purpose: For the specified tech/band combination, display the offset from maximum Tx power for the tech/band combination and the SAR limits for each temperature bin. (For 'bin' definition, see <temperature_bin> description.) <p>Continued on next page)</p>

Table 11-2: SAR Backoff and Thermal Control Command Details (Continued)

Command	Description
!MAXPWR (continued)	<p>Set/report maximum Tx power (continued)</p> <ul style="list-style-type: none"> Query list: AT!MAXPWR=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><band> (RF band)</p> <ul style="list-style-type: none"> 3GPP band number. For a full listing of 3GPP band numbers, see Table 17-2 on page 300. Band support is product specific—see the device's Product Specification or Product Technical Specification document for details. Valid range: 0–88 <p>(<tech> (Network technology))</p> <ul style="list-style-type: none"> 0=WCDMA 1=CDMA 2=LTE <p><temperature_bin> (Temperature bin identifier. CDMA only)</p> <ul style="list-style-type: none"> Valid range: 0–7 The module has minimum and maximum operating temperature thresholds and throughout the temperature range, eight different temperatures are defined during calibration and stored as temperature bins. Temperature values stored correspond to bin boundaries, which map to seven temperature ranges. <p><max_tx_pwr> (Maximum Tx power in dB)</p> <ul style="list-style-type: none"> Valid range: 20.0–24.5

Table 11-2: SAR Backoff and Thermal Control Command Details (Continued)

Command	Description
!SARBACKOFF	<p>Set/report offset from maximum Tx power</p> <p>Set or report the offset from maximum Tx power limit for a specific technology/band combination. Changes take place after the next modem reset.</p> <hr/> <p>Warning: (WP8548/WP75xx devices only) To prevent incorrect SAR backoff values from being used:</p> <ul style="list-style-type: none"> • If !MAXPWR is used to change the max Tx power for a specific technology/band combination, !SARBACKOFF must then be used to update all previously defined SAR backoff values for the same technology/band combination. • Note: SAR backoff values are calculated as $MaxTxPower - BackoffOffset$. <p><i>Failure to adhere to this warning can result in erroneous SAR backoff values for that particular technology/band combination.</i></p> <hr/> <p>Password required: Yes (see !INTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution (WCDMA, CDMA, LTE): ATISARBACKOFF=<Technology>,<Band>,<State>,<Backoff offset> Response: OK Purpose: Set the maximum Tx power for the tech/band/state combination. • Execution (GSM): ATISARBACKOFF=<Technology>,<Band>,<Slot>,<State>,<Modulation>,<Backoff offset> Response: OK Purpose: Set the maximum Tx power for the tech/band/state combination. • Query (WCDMA, LTE): ATISARBACKOFF?<Technology>,<Band>,<State> Response: SAR Backoff: <offset> dBm SAR Limit: <SAR limit> dBm or NV Not Set OK Purpose: For the specified tech/band/state combination, display the offset from maximum Tx power and the SAR limit. <p>(Continued on next page)</p>

Table 11-2: SAR Backoff and Thermal Control Command Details (Continued)

Command	Description
!SARBACKOFF (continued)	<p>Set/report offset from maximum Tx power (continued)</p> <ul style="list-style-type: none"> Query (CDMA): ATISARBACKOFF?<Technology>,<Band>,<State> Response: SAR Backoff: <offset> dBm Max Tx value for temperature bin 0 = <SAR limit> dBm ... Max Tx value for temperature bin 7 = <SAR limit> dBm or NV Not Set OK Purpose: For the specified tech/band/state combination, display the offset from maximum Tx power for the tech/band/state combination and the SAR limits for each temperature bin. (For 'bin' definition, see <temperature_bin> in !MAXPWR.) Query (GSM): ATISARBACKOFF?<Technology>,<Band>,<Slot>,<State>,<Modulation> Response: SAR Backoff: <offset> dBm SAR Limit: <SAR limit> dBm or NV Not Set OK Purpose: For the specified tech/band/slot/state/modulation combination, display the offset from maximum Tx power and the SAR limit. Query list: ATISARBACKOFF=?<Technology> Purpose: Display valid execution format and parameter values for LTE/WCDMA/CDMA and GSM queries. <p>Parameters:</p> <p><Technology> (Network technology)</p> <ul style="list-style-type: none"> 0=WCDMA 1=CDMA 2=LTE 3=GSM <p><Band> (RF band)</p> <ul style="list-style-type: none"> Valid values (Absolute ranges shown below for convenience. Use the Query list format to display full details.): <ul style="list-style-type: none"> LTE: 1–71 WCDMA: 1–19 GSM: 0–3 CDMA: 0–15 Band support is device-dependent. See the device's Product Technical Specification for details. <p><Slot> (Tx slot. GSM only)</p> <ul style="list-style-type: none"> 1–5 <p>(Continued on next page)</p>

Command	Description
!SARINTGPIOMODE	<p>Set/report default pull mode for SAR interrupt GPIOs</p> <p>Set or report the default pull mode (high/low) for SAR interrupt GPIOs. This setting applies to all SAR interrupt GPIOs.</p> <p>Supporting devices: WP76xx/WP77xx; WPx5xx (Release 16+)</p> <p>Password required: Yes (see !ENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: ATISARINTGPIOMODE=<mode> Response: OK Purpose: Set the default pull mode for all SAR interrupt GPIOs. • Query: ATISARINTGPIOMODE? Response: <mode> OK Purpose: Indicate the default pull mode. • Query list: ATISARINTGPIOMODE=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><mode> (SAR GPIO interrupt pull mode default setting)</p> <ul style="list-style-type: none"> • 0=Standard mode—Default pull is HIGH/DAL_GPIO_PULL_UP • 1=Inverse mode—Default pull is LOW/DAL_GPIO_PULL_DOWN
!SARSTATE	<p>Set/report SAR backoff state</p> <p>Set or report the current SAR (Specific Absorption Rate) backoff state.</p> <hr/> <p><i>Note: This setting is not persistent. To change the default backoff state (persistent), use !SARSTATEDFLT.</i></p> <hr/> <p>Password required: No</p> <p>Persistent across power cycles: No</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: ATISARSTATE=<state> Response: OK Purpose: Temporarily set the SAR backoff state. • Query: ATISARSTATE? Response: !SARSTATE: <state> OK Purpose: Indicate the current SAR backoff state. • Query list: ATISARSTATE=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><state> (SAR backoff state)</p> <ul style="list-style-type: none"> • 0=No backoff • 1–8=Backoff state 1 to 8

Table 11-2: SAR Backoff and Thermal Control Command Details (Continued)

Command	Description
!SARSTATEDFLT	<p>Set/report default SAR backoff state</p> <p>Set or report the default (persistent) SAR (Specific Absorption Rate) backoff state.</p> <hr/> <p><i>Note: This setting is persistent. To temporarily change the backoff state, use !SARSTATE.</i></p> <hr/> <p>Password required: No Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!SARSTATEDFLT=<state> Response: OK Purpose: Set the default SAR backoff state. • Query: AT!SARSTATEDFLT? Response: <state> OK Purpose: Indicate the default SAR backoff state. • Query list: AT!SARSTATEDFLT=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><state> (SAR backoff state)</p> <ul style="list-style-type: none"> • 0=No backoff • 1–8=Backoff state 1 to 8

>> 12: Audio Commands

Introduction

This chapter describes commands used to configure and manage audio-capable WPx5xx and WP76xx devices.

Command summary

Table 12-1 lists the commands described in this chapter.

Table 12-1: Audio Commands

Command	Description	Page
!AVAUDIO	Play/record audio file (.wav format)	248
!AVAUDIOLPBK	Start/stop audio loopback	249
!AVAUDVOL	Set/return audio playback volume	249
!AVCFG	Bind audio profile to device/physical interface	250
!AVCODECMICTXG	Set/return codec Tx path gain	252
!AVDEF	Reset configurable audio parameters to default settings	253
!AVEC	Enable/disable Echo Cancellation mode for audio profile	254
!AVMUTE	Mute/unmute earpiece/microphone/call waiting tone	255
!AVNS	Enable/disable Noise Suppression and Far-end Noise Suppression modes for audio profile	256
!AVSETPROFILE	Select/configure audio profile for CS call	257
!AVSETVOL	Query/set audio profile's Rx volume level	258
!AVTONEPLAY	Play a tone	259
!AVTXVOL	Query/set audio profile's Tx volume gain	260
+CLVL	Set active audio profile's Rx volume	261
+VTD	Set DTMF tone duration	261
+VTS	Send DTMF tone	262

Command reference

Table 12-2: Audio Command Details

Command	Description
!IAVAUDIO	<p>Play/record audio file (.wav format)</p> <p>Play an audio file (locally or for both sides of a voice call), or record to an audio file (from the microphone only, or both sides of a voice call).</p> <p>Each <operation> type is started and stopped independently. For example, to simultaneously play a file for both ends of a voice call and record that call to another file:</p> <ol style="list-style-type: none"> 1. Start recording to a file and start playing an existing audio file for both ends of the call: AT!IAVAUDIO=4,1,/usr/recording1.wav AT!IAVAUDIO=3,1,/data/outgoing1.wav 2. When ready to stop playing the outgoing file and recording the call: AT!IAVAUDIO=3,0 AT!IAVAUDIO=4,0 <hr/> <p><i>Note: Only .wav format audio files are supported.</i></p> <hr/> <p>Supporting devices: Audio-capable WPx5xx / WP76xx devices Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!IAVAUDIO=<operation>, <switch>[, <file_path>] Response: OK Purpose: Start or stop the playback or recording of an audio file. Note: <file_path> is required when <switch> = 1, and optional when <switch> = 0. • Query List: AT!IAVAUDIO=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><operation> (Play or record)</p> <ul style="list-style-type: none"> • 1=Audio play. Play the specified .wav file (<filepath>) locally. If a voice call is in progress, the file is not played for the far end of the call. • 2=Audio record. Record the local microphone input to the specified .wav file (<filepath>). If a voice call is in progress, the far end of the call is not recorded. • 3=WWAN play. Play the specified .wav file (<filepath>) for both ends of a voice call. • 4=WWAN record. Record both ends of a voice call to the specified .wav file (<filepath>). <p><switch> (Stop or start playing/recording)</p> <ul style="list-style-type: none"> • 0=Stop • 1=Start <p><filepath> (Absolute pathname of file to play/record)</p> <ul style="list-style-type: none"> • ASCII string. Note that the string must not use quotation marks. • Example: /usr/avfile.wav Note: Relative pathnames are not supported. • Required when <switch> = 1 (starting to play or record a file), and optional when <switch> = 0.

Table 12-2: Audio Command Details (Continued)

Command	Description
!AVALAUDIOLPBK	<p>Start/stop audio loopback Set up (start/stop) an audio loopback at some point in the audio chain.</p> <p>Supporting devices: Audio-capable WPx5xx/WP76xx devices Password required: Yes (see !ENTERCND for details)</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!AVALAUDIOLPBK=<enable> Response: OK Purpose: Start or stop an audio loopback. • Query List: AT!AVALAUDIOLPBK=? Purpose: Display valid execution format and parameter values. <p>Parameters: <enable> (Start/stop an audio loopback)</p> <ul style="list-style-type: none"> • 0=Stop the loopback • 3=PCM loopback (WPx5xx only, not supported on WP76xx/WP77xx) • 4=codec loopback
!AVALAUDVOL	<p>Set/return audio playback volume Set (or return) the audio playback volume. The volume setting can be set before or during file playback and takes effect immediately.</p> <p>Supporting devices: Audio-capable WPx5xx/WP76xx devices Password required: No Reset required to apply changes: No Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!AVALAUDVOL=<volume> Response: OK Purpose: Set the audio playback volume. • Query: AT!AVALAUDVOL? Response: !AVALAUDVOL: <volume> Purpose: Return the current volume. • Query List: AT!AVALAUDVOL=? Purpose: Display valid execution format and parameter values. <p>Parameters: <volume> (Audio playback volume)</p> <ul style="list-style-type: none"> • Format: Hexadecimal • Valid range: 0–FFFF <p>Example(s):</p> <ul style="list-style-type: none"> • AT!AVALAUDVOL=172A

Table 12-2: Audio Command Details (Continued)

Command	Description
!AVCFG	<p>Bind audio profile to device/physical interface</p> <p>Bind an audio profile to a specific ACDB (Audio Calibration Database) device/physical interface combination and, depending on the interface that is chosen, configure the physical interface.</p> <p>Supporting devices: Audio-capable WPx5xx / WP76xx devices</p> <p>Password required: No</p> <p>Reset required to apply changes: No</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT!AVCFG=<profile>,<device>,<interface>[,<param1>[,...<paramN>]] Response: OK Purpose: Bind the specified <profile> to a <device> / <interface> combination. If applicable, specify required parameters. Query: AT!AVCFG? Response: !AVCFG: <profile0>,<device>,<interface> [<param1> [...<paramN>]] ... <profile5>,<device>,<interface> [<param1> [...<paramN>]] Purpose: Show current bindings for all audio profiles. Query List: AT!AVCFG=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><profile> (Audio profile)</p> <ul style="list-style-type: none"> (WP75xx / WP8548) 0–5=Audio profile number (6 profiles are supported) (WP76xx) 0–9=Audio profile number (10 profiles are supported) <p><device> (ACDB device type)</p> <ul style="list-style-type: none"> 0=Vehicle hands-free device 1=Handset 2=TTY device 3=USB device <p><interface> (Physical interface type)</p> <ul style="list-style-type: none"> 0=PCM (Use <param> options to configure the interface.) 1=I2S (No <param> required.) 2=Internal codec (No <param> required.) 3=USB (No <param> required.) <p>(Continued on next page)</p>

Table 12-2: Audio Command Details (Continued)

Command	Description
!AVCFG (continued)	Bind audio profile to device/physical interface (continued) <param> (Interface configuration parameters) <ul style="list-style-type: none"> For <interface>=0 (PCM): <ul style="list-style-type: none"> <param1> (Mode) <ul style="list-style-type: none"> 0=Slave 1=Master 2=Auxiliary PCM <param2> (Rate) <ul style="list-style-type: none"> 0=8K 1=16K <param3> (Format) <ul style="list-style-type: none"> 0=Linear 1=μ-law 2=A-law <param4> (Padding) <ul style="list-style-type: none"> 0=Disable 1=Enable <param5> (Bits per frame (bpf)) <ul style="list-style-type: none"> 0=8 bpf 1=16 bpf 2=32 bpf 3=64 bpf 4=128 bpf 5=256 bpf <p>Example(s):</p> <ul style="list-style-type: none"> AT!AVCFG=1,1,0,1 (Bind profile 1 to the handset device via PCM, and set PCM as master mode.)

Table 12-2: Audio Command Details (Continued)

Command	Description
!AVCODECMICTXG	<p>Set/return codec Tx path gain</p> <p>Set (or return) the codec Tx path gain for s specific profile.</p> <p>Supporting devices: Audio-capable WPx5xx/WP76xx devices</p> <p>Password required: Yes (see !ENTERCND for details)</p> <p>Reset required to apply changes: No</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!AVCODECMICTXG=<profile>,<gain> Response: OK Purpose: Set the overall gain. • Query: AT!AVCODECMICTXG?<profile> Response: !AVCODECMICTXG: <gain> Purpose: Return the overall gain for the specified <profile>. • Query List: AT!AVCODECMICTXG=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><profile> (Audio profile)</p> <ul style="list-style-type: none"> • (WP75xx/WP8548) 0–5=Audio profile number (6 profiles are supported) • (WP76xx) 0–9=Audio profile number (10 profiles are supported) <p><gain> (Codec Tx path overal gain value)</p> <ul style="list-style-type: none"> • Valid <gain> values: 0000–FFFF Note: 4 hexadecimal digits must be entered. (e.g. 0x7F is not valid) • 0000—Disable • 0001–FFFF—Gain in range -48 dB to +48 dB <ul style="list-style-type: none"> • 0001: -48 dB 0002: -42 dB ... 010F: 0 dB 217F: 30 dB ... FFFF: 48 dB • Gain is calculated using the following formula: $20 * \text{LOG}(\text{<value>} / 0x0100)$ • Supported gain range: -48 dB to +48 dB <p>Example(s):</p> <ul style="list-style-type: none"> • AT!AVCODECMICTXG=1,1AF4 • AT!AVCODECMICTXG=5,217F

Table 12-2: Audio Command Details (Continued)

Command	Description
!AVDEF	<p>Reset configurable audio parameters to default settings</p> <p>Reset all of the configurable audio parameters that are stored in non-volatile (NV) memory to default values.</p> <hr/> <p><i>Note: Some values that affect ACDB (Audio Calibration Database) devices are stored in NV, and some are stored on the device. Values that are stored on the device are not affected by this command.</i></p> <hr/> <p>Supporting devices: Audio-capable WPx5xx/WP76xx devices Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution (WPx5xx): AT!AVDEF Response: OK Purpose: Reset all parameters to default values. Execution (WP76xx/WP77xx): AT!AVDEF[=<profile>] Response: OK Purpose: Reset all parameters for the specified <profile> (or all profiles if "=<profile>" not used) to default values. <p>Parameters:</p> <p><profile> (Audio profile)</p> <ul style="list-style-type: none"> Valid values: <ul style="list-style-type: none"> No value (e.g. "AT!AVDEF")—Reset parameters for all profiles to default values. 0–9—Audio profile number (10 profiles are supported). Resets parameters for the specified profile number.

Table 12-2: Audio Command Details (Continued)

Command	Description
!AVEC	<p>Enable/disable Echo Cancellation mode for audio profile Enable or disable Echo Cancellation (EC) mode for a specific audio profile.</p> <p>Supporting devices: Audio-capable WPx5xx / WP76xx devices Password required: No Reset required to apply changes: No Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!AVEC=<profile>,<value> Response: OK Purpose: Enable or disable EC mode for the selected profile. • Query: AT!AVEC?<profile> Response: !AVEC: <value> Purpose: Show the current EC mode state (enabled/disabled) for the selected profile. • Query List: AT!AVEC=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><profile> (Audio profile)</p> <ul style="list-style-type: none"> • (WP75xx / WP8548) 0–5=Audio profile number (6 profiles are supported) • (WP76xx) 0–9=Audio profile number (10 profiles are supported) <p><value> (EC mode state)</p> <ul style="list-style-type: none"> • 0=Disable • 1=Enable

Table 12-2: Audio Command Details (Continued)

Command	Description
!AVMUTE	<p>Mute/unmute earpiece/microphone/call waiting tone Mute or unmute the earpiece, microphone, and call waiting tone.</p> <p>Supporting devices: Audio-capable WPx5xx/WP76xx devices Password required: No Reset required to apply changes: No Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!AVMUTE=<profile>,<earmute>,<micmute>[,<cwtmute>] Response: OK Purpose: Set the mute states for the selected profile. • Query: AT!AVMUTE?<profile> Response: !AVMUTE: <earmute>,<micmute>,<cwtmute> Purpose: Show the current mute settings (enabled/disabled) for the selected profile. • Query List: AT!AVMUTE=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><profile> (Audio profile)</p> <ul style="list-style-type: none"> • (WP75xx/WP8548) 0–5=Audio profile number (6 profiles are supported) • (WP76xx/WP77xx) 0–9=Audio profile number (10 profiles are supported) <p><earmute> (Earpiece mute state)</p> <ul style="list-style-type: none"> • 0=Unmuted • 1=Muted <p><micmute> (Microphone mute state)</p> <ul style="list-style-type: none"> • 0=Unmuted • 1=Muted <p><cwtmute> (Call waiting tone mute state)</p> <ul style="list-style-type: none"> • 0=Unmuted • 1=Muted • This parameter is optional.

Table 12-2: Audio Command Details (Continued)

Command	Description
!AVNS	<p>Enable/disable Noise Suppression and Far-end Noise Suppression modes for audio profile</p> <p>Enable or disable Noise Suppression (NS) mode on the Tx path and/or Far-end Noise Suppression (FNS) mode on the Rx path for a specific audio profile.</p> <p>Supporting devices: Audio-capable WPx5xx/WP76xx devices</p> <p>Password required: No</p> <p>Reset required to apply changes: No</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!AVNS=<profile>,<ns>[,<fns>] Response: OK Purpose: Enable or disable NS mode (and optionally, FNS mode) for the selected profile. • Query: AT!AVNS?<profile> Response: !AVNS: <ns>,<fns> Purpose: Show the current NS and FNS mode states (enabled/disabled) for the selected profile. • Query List: AT!AVNS=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><profile> (Audio profile)</p> <ul style="list-style-type: none"> • (WP75xx/WP8548) 0–5=Audio profile number (6 profiles are supported) • (WP76xx) 0–9=Audio profile number (10 profiles are supported) <p><ns> (NS mode state)</p> <ul style="list-style-type: none"> • 0=Disable • 1=Enable <p><fns> (FNS mode state)</p> <ul style="list-style-type: none"> • 0=Disable • 1=Enable

Table 12-2: Audio Command Details (Continued)

Command	Description
!AVSETPROFILE	<p>Select/configure audio profile for CS call</p> <p>Select and configure an audio profile to be used for a circuit-switched call. (To view the current audio profile configurations, use ATIAVCFG?).</p> <p>Supporting devices: Audio-capable WPx5xx/WP76xx devices</p> <p>Password required: No</p> <p>Reset required to apply changes: No</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: ATIAVSETPROFILE=<profile>[,<earmute>,<micmute>,<generator>,<volume>[,<cwtmute>]] Response: OK Purpose: Select the profile to use for a circuit switched call and, if needed, configure the mute and volume settings for the profile. Query: ATIAVSETPROFILE?[<generator>] Response: !AVSETPROFILE: <profile>,<earmute>,<micmute>,[<generator>,<volume>,<cwtmute>] Purpose: Show the profile that has been selected for circuit switched calls, and its configuration parameters. (The <generator> field does not appear if <generator> is used in the query.) Query List: ATIAVSETPROFILE=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><profile> (Audio profile used for CS call)</p> <ul style="list-style-type: none"> (WP75xx/WP8548) 0–5=Audio profile number (6 profiles are supported) (WP76xx) 0–9=Audio profile number (10 profiles are supported) <p><earmute> (Earpiece mute state)</p> <ul style="list-style-type: none"> 0=Unmuted 1=Muted <p><micmute> (Microphone mute state)</p> <ul style="list-style-type: none"> 0=Unmuted 1=Muted <p><generator></p> <ul style="list-style-type: none"> 0=Voice synthesizer (Note: This is the only option at this time.) <p><volume> (Rx volume level)</p> <ul style="list-style-type: none"> (WP75xx/WP8548) Valid range: 0 (quietest) – 8 (loudest) (WP76xx) Valid range: 0 (quietest) – 5 (loudest) NOTE: The Query List format incorrectly indicates valid range as 0–8. <p><cwtmute> (Call waiting tone mute state)</p> <ul style="list-style-type: none"> 0=Unmuted 1=Muted

>> 13: I/O Commands

Introduction

This chapter describes commands used to configure and manage GPIOs, ADCs and other IOs.

Command summary

[Table 13-1](#) lists the commands described in this chapter.

Table 13-1: I/O Commands

Command	Description	Page
!GPIOINT	GPIO interrupt detected—Unsolicited notification	264
!MADC	Display ADC values	265
!MCELL	Enable/disable coin cell charging feature	266
!MVCoin	Configure coin cell charging	267
!RIOWNER	Set/query Ring Indicator owner	268
+WEXTCLK	Enable/Disable user clock mode	269
+WIOCFG	GPIO Configuration	270
+WIOR	Read GPIO value	272
+WIOW	Write GPIO value	273
+WRID	Set/query Ring Indicator Duration	273
+WWAKE	Query Wakeup Event	274
+WWAKESET	Set/query Wake Up Event Mask	275

Command reference

Table 13-2: I/O Command Details

Command	Description
!GPIINT (notification)	<p>GPIO interrupt detected—Unsolicited notification</p> <p>Unsolicited notification received when an I/O pin sends an interrupt.</p> <hr/> <p><i>Note: The I/O pin must be configured via +WIOCFG as an Input with a <trigger> value greater than 0. See +WIOCFG on page 270 for details.</i></p> <hr/> <p>To enable !GPIINT (and other notifications), use AT+WUSLMSK. See +KSREP on page 79 for details.</p> <p>Notification format: !GPIINT:<index>[,<level>]</p> <p>Examples:</p> <ul style="list-style-type: none"> !GPIINT:7 <i>Edge-triggered interrupt detected on EXT_GPIO7.</i> !GPIINT:5,0 <i>Level-triggered interrupt detected on EXT_GPIO5.</i> <p>Parameters:</p> <p><index> (Index of I/O port that generated the interrupt)</p> <ul style="list-style-type: none"> 1–42 Not all values are valid. Use AT+WIOCFG? (page 270) to view supported values. <p><level> (Logic level of the I/O port that generated the interrupt)</p> <ul style="list-style-type: none"> 0—Logic LOW 1—Logic HIGH

Table 13-2: I/O Command Details (Continued)

Command	Description
!MADC	<p>Display ADC values</p> <p>Read one of the available ADCs (Analog to Digital Converters).</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Query: AT!MADC?<adc> Response: !MADC: <value> Purpose: Show the value being reported by the specified ADC. Query List: AT!MADC=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><adc> (Analog to Digital Converters)</p> <ul style="list-style-type: none"> 0—VBATT (Battery voltage) (WP8548/WP75xx only) 1—VCOIN (Charging voltage of RTC coin battery. Note: This voltage can be configured using AT!MVCoin) 2—PA_THERM (Power Amplifier Thermistor) 3—PMIC_THERM (Power Management Integrated Circuit Thermistor) 4—XO_THERM (Crystal Oscillator Thermistor) 5—ADC1 6—ADC2 10—ADC0 11—ADC3 <p><value> (Value returned from ADC)</p> <ul style="list-style-type: none"> ASCII string, contents depend on ADC being polled.

Command	Description
!MCCELL	<p>Enable/disable coin cell charging feature Enable or disable the coin cell charging feature. (See !MVCOIN on page 267 to configure coin cell charging.)</p> <p>Supporting devices: WP75xx, WP8548 Password required: Yes (see !ENTERCND for details) Reset required to apply changes: Yes Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!MCCELL=<enable> Response: OK, or ERROR (<i>if invalid parameter entered</i>) Purpose: Enable or disable coin cell charging. • Query: AT!MCCELL? Response: !MCCELL: <enable> OK Purpose: Report the current setting for coin cell charging. • Query List: AT!MCCELL=? Purpose: Return the command format and the supported parameter values. <p>Parameters: <enable> (Coin cell charging state)</p> <ul style="list-style-type: none"> • 0—Disabled • 1—Enabled (Default)

Table 13-2: I/O Command Details (Continued)

Command	Description
!MVCoin	<p>Configure coin cell charging</p> <p>Configure the coin cell charging configuration (voltage and resistance). (Default options described in parameter list below.) (See !MCCell on page 266 to enable/disable coin cell charging.)</p> <p>Supporting devices: WP75xx, WP8548 Password required: Yes (see !ENTERCND for details) Reset required to apply changes: Yes Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!MVCoin=<voltage>,<resistance> Response: OK, or ERROR (<i>if invalid parameter entered</i>) Purpose: Configure coin cell charging parameters. • Query: AT!MVCoin? Response: !MVCoin: <voltage>,<resistance> OK Purpose: Report the current coin cell charging configuration. • Query List: AT!MVCoin=? Purpose: Return the command format and the supported parameter values. <p>Parameters:</p> <p><voltage> (Charging voltage)</p> <ul style="list-style-type: none"> • 0—3.0V • 1—3.1V • 2—3.2V • 3—2.5V (Default) <p><resistance> (Charging resistor)</p> <ul style="list-style-type: none"> • 0—2100 Ω (Default) • 1—1700 Ω • 2—1200 Ω • 3—800 Ω

Table 13-2: I/O Command Details (Continued)

Command	Description
!RIOWNER	<p>Set/query Ring Indicator owner</p> <p>Set or return the core that controls the module's Ring Indicator (RI) pin.</p> <p>Password required: No</p> <p>Reset required to apply changes: Yes (Changes take effect immediately, but a controlled reset is required to make the change persistent.)</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none">• Execution: AT!RIOWNER=<owner> Response: OK Purpose: Indicate which core controls the RI pin.• Query: AT!RIOWNER? Response: !RIOWNER: <owner> Purpose: Display the core that controls the RI pin.• Query List: AT!RIOWNER=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><owner> (Core that controls the RI pin)</p> <ul style="list-style-type: none">• 0—Modem core• 1—Application core (Legato)

Table 13-2: I/O Command Details (Continued)

Command	Description
+WEXTCLK	<p>Enable/Disable user clock mode Enable/disable generation of 19.2 MHz on the user output clock pins.</p> <p>Supporting devices: WP Password required: No Reset required to apply changes: No Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT+WEXTCLK=<port>,<mode_select>[,<mode>] Response: OK Purpose: Enable the user clock pin for automatic or manual mode, or disable the pin. • Query: AT+WEXTCLK? Response: +WEXTCLK: <port>,<mode_select> Purpose: Display the current clock mode setting. • Query List: AT+WEXTCLK=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><port> (Output port)</p> <ul style="list-style-type: none"> • 1 <p><mode_select> (Enable/disable output)</p> <ul style="list-style-type: none"> • 0—Off (disable) • 1—On • 2—Switch between automatic and manual mode Note: WPx5xx only. Not supported for WP76xx/WP77xx. <p><mode> ()</p> <ul style="list-style-type: none"> • Parameter is used only if <mode_select> = 2. • 0—Automatic mode • 1—Manual mode

Table 13-2: I/O Command Details (Continued)

Command	Description
+WIOCFG	<p>GPIO Configuration</p> <p>Configure a specific GPIO (I/O port) for one of the following uses (indicated by the <func> parameter):</p> <ul style="list-style-type: none"> GPIO, accessible via AT commands (<func> = 4) Usage by the embedded Linux host (<func> = 16) Deallocate port (<func> = 0) Antenna select using GPIOs 28–31 (<func> = 0, then !ANTSEL can be used) <hr/> <p><i>Note: To enable 'Reset Out', set <gpio>=6 and <func>=0. Refer to the AirPrime WP76xx Product Technical Specification for details.</i></p> <hr/> <p>Password required: No Reset required to apply changes: No Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution (Mark GPIO as unallocated): AT+WIOCFG=<gpio>,<func> <i>(Note: <func> must be 0.)</i> Response: OK <i>(If the port configuration works as requested)</i> Purpose: Deallocate a GPIO. (Note: This must be done for GPIO28–GPIO31 if !ANTSEL is to be used for antenna select.) Execution (Allocate GPIO for General use or for Embedded Host use): AT+WIOCFG=<gpio>,<func>,<dir>,<state>,<pull>,<trigger>,<intrvl> <i>(Note 1: <func> must be 4 or 16. All other <func> values are assigned by other commands as noted in the parameter description below.)</i> Response: OK <i>(If the port configuration works as requested)</i> or ERROR <i>(If the port is already allocated—the current <func> value is not 0)</i> Purpose: Allocate the requested port (<idx>) for use as a GPIO or for control by the embedded host. Query: AT+WIOCFG?[<gpio>] Response: <i>(if <gpio> is specified>)</i> +WIOCFG:<gpio>,<func>,<dir>,<state>,<pull>,<trigger>,<intrvl> OK or <i>(if <gpio> is not specified, shows all ports (<gpio> values))</i> +WIOCFG:<gpio>,<func>,<dir>,<state>,<pull>,<trigger>,<intrvl> ... +WIOCFG:<gpio>,<func>,<dir>,<state>,<pull>,<trigger>,<intrvl> OK Purpose: Report the configuration for the specified port (<gpio>), or for all ports (no <gpio> specified) Query List: AT+WIOCFG=? Purpose: Display valid execution format and parameter values. <p>(Continued on next page)</p>

Table 13-2: I/O Command Details (Continued)

Command	Description
+WIOCFG (continued)	<p>GPIO Configuration (continued)</p> <p>Parameters:</p> <p><gpio> (Index of I/O port to be configured)</p> <ul style="list-style-type: none"> Valid range: 1–46. Use AT+WIOCFG? to view supported <gpio> values. Example: AT+WIOCFG? +WIOCFG: 2,16,0,0,1,0,0 +WIOCFG: 7,16,0,0,1,0,0 ... <p>The first parameters of each line of output are the valid <gpio> values (e.g. 2, 7, ...).</p> <ul style="list-style-type: none"> Note: To enable 'Reset Out', set <gpio> = 6 and <func> = 0. <p><func> (I/O port usage)</p> <ul style="list-style-type: none"> Valid values for Execution format: <ul style="list-style-type: none"> 0—Unallocated 4—General GPIO 16—Embedded host Valid values for Query format: <ul style="list-style-type: none"> 0—Unallocated 2—Antenna Select (applies only to GPIO28–31). GPIO28–GPIO31 can be allocated for external antenna selection using !ANTSEL. 3—External SIM2_DET Applies only to GPIO4, allocated for external SIM2 detection when: <ul style="list-style-type: none"> "EXTUIMSWITCHEN" customization is enabled and UIM1 is enabled by "SIMHOTSWAPDIS" customization or "UIM2ENABLE" customization is enabled) 4—General GPIO 8—External SIM Switch (applies only to GPIO6, when EXTUIMSWITCHEN customization is enabled) 16—Embedded host 26—Wi-Fi/LTE Coexistence control UART (applies only to GPIO35) Note: To enable 'Reset Out', set <gpio> = 6 and <func> = 0. <p><dir> (GPIO direction)</p> <ul style="list-style-type: none"> 0—Input 1—Output <p><state> (Power-up state for external GPIO configured as an output)</p> <ul style="list-style-type: none"> 0—Output low level 1—Output high level <p><pull> (Internal pull type for the I/O port)</p> <ul style="list-style-type: none"> 0—No pull 1—Pull down 2—Keeper 3—Pull up <p>(Continued on next page)</p>

Table 13-2: I/O Command Details (Continued)

Command	Description
+WIOCFG (continued)	<p>GPIO Configuration (continued)</p> <p><trigger> (Trigger type for I/O port configured as an input)</p> <ul style="list-style-type: none"> Note: <trigger> is not supported if <gpio>=6 (GPIO6) 0—No trigger 1—Trigger high 2—Trigger low 3—Trigger rising 4—Trigger falling <p><intrvl> (Interval at which the I/O port is checked for the specified trigger (<trig>) level)</p> <ul style="list-style-type: none"> Note: <intrvl> is not supported if <gpio>=6 (GPIO6) 0—50 ms 1—1000 ms <hr/> <p><i>Note: For edge interrupt, the module can only respond one time per 10 ms per GPIO.</i></p>
+WIOR	<p>Read GPIO value</p> <p>Read the pin value of a GPIO (General Purpose I/O port) that has been configured as an input.</p> <hr/> <p><i>Note: This command returns an ERROR if the GPIO has been configured as an output.</i></p> <hr/> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT+WIOR=<gpio> Response: <value> OK or (if <gpio> is configured as an output) ERROR Purpose: Read the specified GPIO's pin value. Query List: AT+WIOR=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><gpio> (External GPIO number)</p> <ul style="list-style-type: none"> Integer value—Use AT+WIOCFG? (page 270) to view supported values. Example: AT+WIOCFG? +WIOCFG: 2,16,0,0,1,0,0 +WIOCFG: 7,16,0,0,1,0,0 ... The first parameters of each line of output are the valid <gpio> values (e.g. 2, 7, ...). <p><value> (GPIO pin value)</p> <ul style="list-style-type: none"> 0–1

Table 13-2: I/O Command Details (Continued)

Command	Description
+WIOW	<p>Write GPIO value</p> <p>Write a GPIO (General Purpose I/O port) pin value.</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT+WIOW=<gpio>,<value> Response: OK Purpose: Write the specified GPIO's pin value. Query List: AT+WIOW=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><gpio> (External GPIO number)</p> <ul style="list-style-type: none"> 1–42 Not all values are valid. Use AT+WIOCFG? (page 270) to view supported values. <p><value> (GPIO pin value)</p> <ul style="list-style-type: none"> 0–1
+WRID	<p>Set/query Ring Indicator Duration</p> <p>Set or return the duration of the pulse that is asserted on the Ring Indicator line (pin RI1). (The pulse may be asserted under several different event conditions, but the pulse duration is the same.)</p> <p>Make sure to set the duration appropriately. While long durations may make sense for some events, it is possible that shorter events may expire before the pulse finishes (for example, an incoming call could expire or be re-routed to voicemail).</p> <p>The design is such that if an event expires before the pulse finishes, the wakeup reason and ring indicator will not be reset.</p> <p>Password required: No</p> <p>Reset required to apply changes: No</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT+WRID[=<n>] Response: OK, or ERROR (<i>If invalid assignment</i>) Purpose: Set the ring indicator pulse duration. If "=<n>" is not entered, the default pulse duration value (50 ms) is used. Query: AT+WRID? Response: +WRID: <n> Purpose: Display the ring indicator pulse duration. Query List: AT+WRID=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><n> (Ring indicator pulse duration, in ms units)</p> <ul style="list-style-type: none"> 50–10000 (Default=50 ms). Range equates to 0.05–10.0 seconds. Integer values only (pulse is set in 1 ms steps)

Table 13-2: I/O Command Details (Continued)

Command	Description
+WWAKE	<p>Query Wakeup Event</p> <p>Return a mask indicating the event(s) that have pulsed the Ring Indicator (RI) signal since the module was powered on or since the last time this command was successfully issued, whichever is most recent.</p> <p>When the command is successfully issued:</p> <ul style="list-style-type: none"> the mask is cleared and, the RI signal is de-asserted (if it is still being asserted when the command is issued) <p>Usage recommendations:</p> <ul style="list-style-type: none"> The application should poll the module immediately upon starting up to determine the event that triggered the RI. Some events depend upon external resources (for example, the network) and may terminate if not handled immediately. For example, if an incoming voice call is not handled in a timely manner, the network will reroute the call to voicemail. The host application should issue this command immediately before powering down if the intention is to leave the device powered on. This resets the wakeup reason, and no "old" events are indicated when in fact they did not happen during the time the host application was powered down. This is necessary because the wakeup reason can be set, and the RI pin asserted during normal execution when the host application is powered on. <p>Notes:</p> <ul style="list-style-type: none"> Notification of losing or finding service implies that the module first had service, and then the service changed the triggering the event. If an established call is dropped after the notification of an incoming call, the module does not reflect the dropped call in the wakeup status. The dropped call should be handled like a dropped call in the case where the application was monitoring the device all along. <p>Supporting devices: WP</p> <p>Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Query: AT+WWAKE? Response: WWAKE: <bitmask> OK Purpose: Indicate the events that pulsed the RI pin. <p>Parameters:</p> <p><bitmask> (Events that pulsed the RI pin)</p> <ul style="list-style-type: none"> See the <bitmask> parameter in +WWAKESET on page 275 for supported values.

Table 13-2: I/O Command Details (Continued)

Command	Description
+WWAKESET	<p>Set/query Wake Up Event Mask</p> <p>Set or query the WAKE mask setting, which indicates the actions that will generate a pulse on the Ring Indicator (RI1) output signal to "wake up" an application.</p> <p>The WAKE mask indicates all events that can generate the wake pulse. When an event occurs, the RI is asserted for the duration defined via AT+WRID and then de-asserts.</p> <p>If additional events occur while the RI is asserted, the RI is not re-asserted and the duration is not extended; it is assumed that the external processor is awakened by the first assertion.</p> <hr/> <p><i>Note: Each time this command is used to set the mask, the previous setting is replaced. That is, the mask value must indicate all the events that will generate a pulse.</i></p> <hr/> <p>Password required: No Reset required to apply changes: No Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT+WWAKESET[=<bitmask>] Response: OK, or ERROR (if an invalid mask value is entered) Purpose: Indicate which events pulse the RI pin. If "<bitmask>" is not entered, the default mask value (4—Incoming voice call) is used. • Query: AT+WWAKESET? Response: +WWAKESET: <bitmask> Purpose: Display the current mask value. • Query List: AT+WWAKESET=? Purpose: Display valid execution format and parameter values. <p>Parameters:</p> <p><bitmask> (Events that will assert (pulse) the RI signal)</p> <ul style="list-style-type: none"> • If more than one event will assert the signal, add the values. For example, to get notifications for both lost service and incoming voice calls, the <bitmask> value is 5. • 0—No notifications • 1—Lost service (for example, going from digital service to no service)—If the module is in deep sleep (32 kHz), the RI will assert and the module will remain asleep • 2—Service regained (going from no service to service)—If the module is in deep sleep (32 kHz), the RI will assert and the module will remain asleep. NOTE: Changing the SID and remaining on the same service type will NOT trigger the RI signal. • 4—Incoming voice call (Default setting) • 8—Incoming data call • 16—Incoming SMS message • WPx5: <ul style="list-style-type: none"> • 32—Incoming voice mail • 64/128/256/512/1024/2048—Reserved • 4095—All events as listed above • WP76xx: <ul style="list-style-type: none"> • 32/64/128/256/512/1024/2048/4096—Reserved • 8191—All events as listed above • (WP77xx): <ul style="list-style-type: none"> • 32/64/128/256/512/1024/2048/4096—Reserved • 8191—All events as listed above

>> 14: AirVantage Commands

Introduction

This chapter describes AirVantage (AV) related commands.

Command summary

[Table 14-1](#) lists the commands described in this chapter.

Table 14-1: AirVantage Device Services Commands

Command	Description	Page
+WDSC	Configure AirVantage Management Services	277
+WDSE	Display most recent AirVantage Management Services error	279
+WDSG	Display AirVantage Management Services status information	280
+WDSI	Activate/deactivate AirVantage Management Services unsolicited notifications	281
+WDSR	Reply to AirVantage server request	284
+WDSS	Configure/connect AirVantage Management Services session	285

Restoring AVMS Default Configuration

To restore AVMS configuration settings to their default values:

1. Remove the current configuration file: `/data/le_fs/avc/config/avcConfigParam`.
2. Reboot the module.

A new configuration file (with default values) is automatically created to replace the file that was removed.

Command reference

Table 14-2: AirVantage Device Services Command Details

Command	Description
+WDSC	<p>Configure AirVantage Management Services</p> <p>Configure the following AirVantage Management Services parameters:</p> <ul style="list-style-type: none"> User agreement for connection, package download, package install, and package uninstall Polling mode to make a connection to the AirVantage server Retry mode to attempt a new connection to the AirVantage server when the WWAN DATA service is temporarily out of order or when an http/CoAP error occurs <p>SIM card requirement: Not required</p> <p>Password required: No</p> <p>Persistent across power cycles: Yes (<State>, <Timer_1>, <Timer_n>)</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution (<Mode> = 0, 1, 2, 3, 5, 6): AT+WDSC=<Mode>,<State> Response: OK Purpose: Enable or disable the selected <Mode>. Execution (<Mode> = 4): AT+WDSC=<Mode>,<Timer_1>[[,<Timer_2>]...[,<Timer_n>]] Response: OK Purpose: Set interval timers for successive connection attempts. Query: AT+WDSC? Response: +WDSC: 0,<State> +WDSC: 1,<State> +WDSC: 2,<State> +WDSC: 3,<State> +WDSC: 4,<Timer_1>[[,<Timer_2>]...[,<Timer_n>]] +WDSC: 5,<State> +WDSC: 6,<State> OK Purpose: Show the current <Mode> configurations. Query List: AT+WDSC=? Purpose: Display valid execution format and parameter values. <p>(Continued on next page)</p>

Table 14-2: AirVantage Device Services Command Details (Continued)

Command	Description
+WDSC (continued)	<p>Configure AirVantage Management Services (continued)</p> <p>Parameters:</p> <p><Mode> (Mode being configured)</p> <ul style="list-style-type: none"> 0—User agreement for AVMS connection. When enabled, the module returns an unsolicited notification to request an agreement before connecting to the server. See +WDSI on page 281 for details. <p>Note: If a FOTA session begins and user agreement for package download (<mode> 1) is disabled, an AVMS connection is initiated, regardless of whether user agreement for AVMS connection (<mode> 0) is enabled or disabled.</p> <ul style="list-style-type: none"> 1—User agreement for package download. When enabled, the module returns an unsolicited notification to request an agreement before downloading any package. See +WDSI on page 281 for details. 2—User agreement for package install. When enabled, the module returns an unsolicited notification to request an agreement before installing any package. See +WDSI on page 281 for details. 3—Polling mode. When enabled (<State> > 0), the module waits for the number of minutes specified in <State>, then will initiate a connection to the AirVantage server based if the device is registered on the network. 4—Retry mode. If an error occurs during a connection to the AirVantage server (e.g. WWAN DATA establishment failed, http error code received), the module will initiate a new connection according to the defined timers. (Note: This is a persistent setting.) 5—User agreement for device reboot. When enabled, the module returns an unsolicited notification to request an agreement before rebooting the device. See +WDSI on page 281 for details. 6—User agreement for application uninstall (software update). When enabled, the module returns an unsolicited notification to request an agreement before uninstalling an application. See +WDSI on page 281 for details. <p><State> (For <Mode> = 0, 1, 2, 5, 6: Activation state of <Mode>)</p> <ul style="list-style-type: none"> 0=Disabled 1=Enabled <p><State> (For <Mode> = 3: Activation state/timer of <Mode>)</p> <ul style="list-style-type: none"> 0=Disabled 1–525600=Polling timer (in minutes) <p><Timer_1> (Connection attempt interval timer, in minutes)</p> <ul style="list-style-type: none"> The number of minutes to wait after the first failed connection attempt before making the next attempt. Valid values: <ul style="list-style-type: none"> 0—<Timer_1> is disabled. Start with <Timer_2>. 1–20160 Default value: 15 <p><Timer_2>..<Timer_n> (Connection attempt interval timers, in minutes)</p> <ul style="list-style-type: none"> The number of minutes to wait after connection attempt (n) before making connection attempt (n+1). (Note: There is a maximum of 8 connection attempts.) Valid range: 1–20160 Default values: <ul style="list-style-type: none"> <Timer_2>=60 (Time to wait after second failed connection attempt.) <Timer_3>=240 (Time to wait after third failed connection attempt.) <Timer_4>=960 (Time to wait after fourth failed connection attempt.) <Timer_5>=2880 (Time to wait after fifth failed connection attempt.) <Timer_6>=10080 (Time to wait after sixth failed connection attempt.) <Timer_7>=10080 (Time to wait after seventh failed connection attempt.)

Table 14-2: AirVantage Device Services Command Details (Continued)

Command	Description
+WDSE	<p>Display most recent AirVantage Management Services error Display the most recent HTTP(S) response received by the device for the package download.</p> <p>Requirements:</p> <ul style="list-style-type: none"> AirVantage Management Services must be activated (See +WDSG on page 280 for details). Session must be initiated using AT+WDSS=1,1. (See +WDSS on page 285 for details). <p>SIM card requirement: Not required Password required: No</p> <p>Usage:</p> <ul style="list-style-type: none"> Execution: AT+WDSE Response: [+WDSE: <HTTP_Status>] OK or +CME ERROR: 3 <i>(If AirVantage Management services are not in the Activated state.)</i> Purpose: Display most recent response. (If HTTP/HTTPS is not yet used, return only OK.) <p>Parameters: <HTTP_Status> (Standard HTTP status code)</p> <ul style="list-style-type: none"> none—No response shown if HTTP/HTTPS has not yet been used. >> 15: SMS Wake Commands

Introduction

This chapter describes commands used for the SMS host wake-up feature.

Command summary

[Table 15-1](#) lists the commands described in this chapter.

Table 15-1: SMS Wake Commands

Command	Description	Page
!SMWAKE	Enable/disable SMS host wake-up feature	287
!SMWAKEWIDTH	Set/read SMS Wake signal width	288

Command reference

Table 15-2: SMS Wake Command Details

Command	Description
!SMSWAKE	<p>Enable/disable SMS host wake-up feature</p> <p>Enable/disable the SMS host wake-up feature. Using this feature, an SMS message containing a defined 'wake mask' can be used to wake a tethered host processor (e.g. a laptop).</p> <p>Supporting devices: WP76xx</p> <p>Password required: Yes</p> <p>Reset required to apply changes: No</p> <p>Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> <p>Execution: AT!SMSWAKE=<bEnabled>[,<wakeMask>]</p> <p>Response: OK</p> <p>or</p> <p>ERROR</p> <p>Purpose: Disable the SMS host wake up feature, or enable the SMS host wake up feature and define the <wakeMask> that can be used to wake the tethered host.</p> <p>Query: AT!SMSWAKE?</p> <p>Response: !SMSWAKE: Enabled <wakeMask>> OK</p> <p>or</p> <p>!SMSWAKE: Disabled OK</p> <p>Purpose: Report the current state of the SMS host wake-up feature.</p> <p>Query List: AT!SMSWAKE=?</p> <p>Purpose: Return the execution command format and the supported parameter values.</p> <p>Parameters:</p> <p><bEnabled> (SMS wake-up feature state)</p> <ul style="list-style-type: none"> 0—Disabled 1—Enabled <p><wakeMask> (Bitmask)</p> <ul style="list-style-type: none"> 32-bit bitmask, in Hex format Parameter is not used when command is used to disable the feature. Example: F27A4BB6

Table 15-2: SMS Wake Command Details (Continued)

Command	Description
!SMSWAKEWIDTH	<p>Set/read SMS Wake signal width Set/read the SMS Wake signal width.</p> <p>Supporting devices: WP76xx Password required: Yes Reset required to apply changes: No Persistent across power cycles: Yes</p> <p>Usage:</p> <ul style="list-style-type: none"> • Execution: AT!SMSWAKEWIDTH=<width> Response: OK or ERROR Purpose: Set the wake signal width. • Query: AT!SMSWAKEWIDTH? Response: !SMSWAKEWIDTH: <width> OK Purpose: Report the configured wake signal width. • Query List: AT!SMSWAKEWIDTH=? Purpose: Return the execution command format and the supported parameter values. <p>Parameters: <width> (SMS Wake signal width, in milliseconds)</p> <ul style="list-style-type: none"> • Integer • Valid range: 1–65535

>> 16: Supported GSM/WCDMA AT Commands

This chapter identifies standard AT commands that are supported by most Sierra Wireless AirPrime devices. These commands:

- Control serial communications over an asynchronous interface (*ITU-T Serial Asynchronous Dialling and Control (Recommendation V.250)*, available on the International Telecommunication Union web site, www.itu.int). See [Table 16-1](#) below.
- Control SMS functions for devices on GSM/WCDMA networks (*3GPP TS 27.005*, available on the 3GPP web site, www.3gpp.org) See [Table 16-2](#) on page 291.
- Control devices operating on GSM/WCDMA networks (*3GPP TS 27.007*, available on the 3GPP web site, www.3gpp.org) See [Table 16-3](#) on page 293.

The tables below identify whether each command is supported on Sierra Wireless UMTS devices. An "N/A" in the Supported column of the table indicates that the command is related to a feature (such as voice) that is not available on the modems.

Commands that are partially supported include descriptions identifying any limitations on command usage. Also, some commands are described in more detail in other chapters—the descriptions for these commands link to those detailed entries (for example, [&V](#) in [Table 16-1](#) on page 289).

Table 16-1: Supported ITU-T Recommendation V.250 AT Commands

Command	Description	Supported ✓=Yes; ✗=No
Commands		
&C	Set Data Carrier Detected (Received line signal detector) function mode	✗
&D	Set Data Terminal Ready function mode	✓
&F	Set all current parameters to manufacturer's defaults	✓
&S	Set DSR signal	✓
&T	Auto tests	✗
&V	Return operating mode AT configuration parameters	✓
&W	Store current parameter to user-defined profile	✓
+DR	V42bis data compression report	✓
+DS	V42bis data compression	✓
+GCAP	Request complete TA capabilities list	✓
+GMI	Request manufacturer identification	✓
+GMM	Request TA model identification	✓
+GMR	Request TA revision identification	✓
+GOI	Request global object identification	✗

Table 16-1: Supported ITU-T Recommendation V.250 AT Commands (Continued)

Command	Description	Supported ✓=Yes; ✗=No
+GSN	Request TA serial number identification	✓
+ICF	Set TE-TA control character framing	✓
+IFC	Set TE-TA local data flow control	✓
+ILRR	Set TE-TA local rate reporting mode	✗
+IPR	<p>Set fixed local rate (default rate is 115200).</p> <hr/> <p><i>Note: WP76xx/WP77xx modules support AT!MUXMODE. For these modules, the baud rate is stored in NV memory on the modem side (when AT!MUXMODE is 0 or 2) or in a Linux regular file on the application side (when AT!MUXMODE is 1). Therefore, when switching between MUX modes, the baud rate may also change.</i></p> <p><i>Note: If AT&F is used to set the device to manufacturer defaults, the baud rate in NV resets to default (115200), but the baud rate in the Linux regular file does not change.</i></p> <p><i>Note: The baud rate change takes effect immediately when +IPR is used over the UART AT port, or takes effect after the module is reset (power cycled) when +IPR is used over the USB AT port.</i></p> <hr/>	✓
A	Answer incoming call	✓
A/	Re-issues last AT command given	✓
D	Dial	✓
D><MEM><N>	Originate call to phone number in memory <MEM>	✗
D><N>	Originate call to phone number in current memory	✓
D><STR>	Originate call to phone number in memory which corresponds to alphanumeric field <STR>	✗
DL	Redial last telephone number used	✗
E	Set command echo mode	✓
H	Disconnect existing connections	✓
I	Display product identification information	✓
L	Set monitor speaker loudness	✗
M	Set monitor speaker mode	✗
O	Switch from command mode to data mode	✓
P	Select pulse dialing	✗
Q	Set Result code presentation mode	✓

Table 16-1: Supported ITU-T Recommendation V.250 AT Commands (Continued)

Command	Description	Supported ✓=Yes; ✗=No
S0	Set number of rings before automatically answering the call	✓
S10	Set disconnect delay after indicating the absence of data carrier	✓
S3	Set command line termination character	✓
S4	Set response formatting character	✓
S5	Set command line editing character	✓
S6	Set pause before blind dialing	✓
S7	Set number of seconds to wait for connection completion	✓
S8	Set number of seconds to wait when comma dial modifier used	✓
T	Select tone dialing	✓
V	Set result code format mode	✓
X	Set connect result code format and call monitoring	✓
Z	Set all current parameters to user-defined profile	✓
Result Codes		
OK	Acknowledges execution of a command	✓
CONNECT	A connection has been established	✓
RING	Unsolicited notification of an incoming call signal from the network	✓
NO CARRIER	The connection has been terminated or the attempt to establish a connection failed	✓
ERROR	Command not recognized, command line maximum length exceeded, parameter value invalid, or other problem with processing the command line	✓
NO DIALTONE	No dial tone detected	✓
BUSY	Engaged (busy) signal detected	✓

Table 16-2: Supported 27.005 AT Commands

Command	Description	Supported ✓=Yes; ✗=No
+CBM	Cell broadcast message directly displayed	✓
+CBMI	Cell broadcast message stored in memory at specified <index> location	✗
+CDS	SMS status report after sending a SMS	✓
+CDSI	Incoming SMS status report	✓
+CMGC	Send command	✓
+CMGD	Delete message	✓

Table 16-2: Supported 27.005 AT Commands (Continued)

Command	Description	Supported ✓=Yes; ✗=No
+CMGF	Message format	✓
+CMGL	List messages	✓
+CMGR	Read message	✓
+CMGS	Send message	✓
+CMGW	Write message to memory	✓
+CMMS	More messages to send	✓
+CMS ERROR: <err>	SMS error (mobile or network error)	✓
+CMSS	Send message from storage	✓
+CMT	Incoming message directly displayed	✓
+CMTI	Incoming message stored in <mem> ("SM"—SIM message storage) at location <index>	✓
+CNMA	New message acknowledgment to mobile equipment	✓
+CNMI	New message indications to TE <hr/> <i>Note: The following parameter settings are not supported:</i> <ul style="list-style-type: none"> • <mode>=0 or 2, <mt>=2 or 3 • <mode>=0 or 2, <ds>=1 • <bm>=1 <hr/>	Partial
+CPMS	Preferred message storage	✓
+CRES	Restore settings	✗
+CSAS	Save settings	✗
+CSCA	Service center address	✓
+CSCB	Select cell broadcast message types	✓
+CSDH	Show text mode parameters	✓
+CSMP	Set text mode parameters	✓
+CSMS	Select message service	✓

Table 16-3: Supported 27.007 AT Commands

Command	Description	Supported ✓=Yes; ✗=No
&C	ITU T V.24 circuit 109 carrier detect signal behavior command Format <ul style="list-style-type: none"> • &C<value> Limitations <ul style="list-style-type: none"> • Default <value> = 2 • <value> = 2 causes the AT/Data carrier detect pin to 'wink' (briefly switch off and on) when data calls end. • <value> = 0 or 1 performs as defined in the standard 	Partial
+CACM	Accumulated call meter	✗
+CACSP	Voice Group or Voice Broadcast Call State Attribute Presentation	N/A
+CAEMLPP	eMLPP Priority Registration and Interrogation	✗
+CAHLD	Leave an ongoing Voice Group or Voice Broadcast Call	N/A
+CAJOIN	Accept an incoming Voice Group or Voice Broadcast Call	N/A
+CALA	Alarm	N/A
+CALCC	List current Voice Group and Voice Broadcast Calls	N/A
+CALD	Delete alarm	N/A
+CALM	Alert sound mode	✗
+CAMM	Accumulated call meter maximum	✗
+CANCHEV	NCH Support Indication	✗
+CAOC	Advice of Charge	✗
+CAPD	Postpone or dismiss an alarm	N/A
+CAPTT	Talker Access for Voice Group Call	N/A
+CAREJ	Reject an incoming Voice Group or Voice Broadcast Call	N/A
+CAULEV	Voice Group Call Uplink Status Presentation	N/A
+CBC	Battery charge	✓
+CBST	Select bearer service type	✓
+CCCM	Current call meter value	✗
+CCFC	Call forwarding number and conditions	✓
+CCLK	Clock	✓
+CCUG	Closed user group	✓
+CCWA	Call waiting	✓
+CCWE	Call Meter maximum event	✗
+CDIP	Called line identification presentation	✗

Table 16-3: Supported 27.007 AT Commands (Continued)

Command	Description	Supported ✓=Yes; ✗=No
+CDIS	Display control	✗
+CEER	Extended error report	✗
+CEREG	EPS network registration status Note: Command implement based on 3GPP 27.007 rel 8.11.0.	✓
+CFUN	Set phone functionality Format • +CFUN = [<fun> [, <rst>]] Limitations • Valid <fun> values: • 0 (minimum functionality, low power draw) • 1 (full functionality, high power draw)	Partial
+CGACT	PDP context activate or deactivate	✓
+CGANS	Manual response to a network request for PDP context activation	✗
+CGATT	PS attach or detach	✓
+CGAUTO	Automatic response to a network request for PDP context activation	✗
+CGCLASS	GPRS mobile station class	(WP85/75) ✓ (WP76) ✓ (WP77) ✗
+CGCLOSP	Configure local octet stream PAD parameters	✗
+CGCMOD	PDP Context Modify	✓
+CGCONTRDP	PDP Context Read Dynamic Parameters	✓
+CGDATA	Enter data state	✓
+CGDCONT	Define PDP Context	(WP85/75) ✓ For WP76/77, see +CGDCONT .
+CGDSCONT	Define Secondary PDP Context	✓
+CGEQMIN	3G Quality of Service Profile (Minimum acceptable)	✓
+CGEQNEG	3G Quality of Service Profile (Negotiated)	(WP85/75) ✓ (WP76/77) ✗
+CGEQOS	Define EPS Quality of Service	✓
+CGEQREQ	3G Quality of Service Profile (Requested)	✓
+CGEREP	Packet Domain event reporting	✓
+CGEV	GPRS network event indication	✓
+CGMI	Request manufacturer identification	✓
+CGMM	Request model identification	✓

Table 16-3: Supported 27.007 AT Commands (Continued)

Command	Description	Supported ✓=Yes; ✗=No
+CGMR	Request revision identification	✓
+CGPADDR	Show PDP address	✓
+CGQMIN	Quality of Service Profile (Minimum acceptable)	✓
+CGQREQ	Quality of Service Profile (Requested)	✓
+CGREG	GPRS network registration status	✓
+CGSCONTRDP	Secondary PDP Context Read Dynamic Parameters	✓
+CGSMS	Select service for MO SMS messages	✓
+CGSN	Request product serial number identification	✓
+CGTFT	Traffic Flow Template	✓
+CGTFTTRDP	Traffic Flow Template Read Dynamic Parameters	✓
+CHLD	Call related supplementary services	✓
+CHSA	HSCSD non-transparent asymmetry configuration	N/A
+CHSC	HSCSD current call parameters	N/A
+CHSD	HSCSD device parameters	N/A
+CHSR	HSCSD parameters report	N/A
+CHST	HSCSD transparent call configuration	N/A
+CHSU	HSCSD automatic user initiated upgrading	N/A
+CHUP	Hangup call	✓
+CIEV	Indicator event	✓
+CIMI	Request international mobile subscriber identity	✓
+CIND	Indicator control Limitations <ul style="list-style-type: none"> The battery charge level indication (<battchg>) is not supported on WP products. Value returned is always 0 (zero). 	(WP85/75) ✓ (WP76) ✓ (WP77) ✗
+CKEV	Key press or release event	✗
+CKPD	Keypad control	✗
+CLAC	List all available AT commands	✗
+CLAE	Language Event	✗
+CLAN	Set Language	✗
+CLCC	List current calls	✓
+CLCK	Facility lock	✓

Table 16-3: Supported 27.007 AT Commands (Continued)

Command	Description	Supported ✓=Yes; ✗=No
+CLIP	Calling line identification presentation <i>Note: Verizon supports +CLIP=[0 1], but does not support +CLIP?</i>	✓ (Partial)
+CLIR	Calling line identification restriction	✓
+CLVL	Set/return internal loudspeaker volume	✓
+CMAR	Master Reset	✗
+CME ERROR: <err>	Mobile Termination error result code	✓
+CMEC	Mobile Termination control mode	✗
+CMEE	Report Mobile Termination error	✓
+CMER	Mobile Termination event reporting <i>Note: The following parameter values are not supported:</i> • <mode> = 2 • <bfr> = 1	Partial
+CMOD	Call mode	✓
+CMUT	Enable/disable uplink voice muting	✓
+CMUX	Multiplexing mode	✓ (When MUX mode configured on USB or UART interface.)
+CNUM	Subscriber number	✓
+COLP	Connected line identification presentation	✓
+COPN	Read operator names	✓
+COPS	Operator selection	✓
+CPAS	Phone activity status	✓
+CPBF	Find phonebook entries	✓
+CPBR	Read phonebook entries	✓
+CPBS	Select phonebook memory storage	✓
+CPBW	Write phonebook entry	✓
+CPIN	Enter PIN	✓
+CPLS	Preferred PLMN list selection	✓
+CPOL	Preferred operator list	✓
+CPROT	Enter protocol mode	✗
+CPUC	Price per unit and currency table	✓

Table 16-3: Supported 27.007 AT Commands (Continued)

Command	Description	Supported ✓=Yes; ✗=No
+CPWC	Power class	✗
+CPWD	Change password	✓
+CR	Service reporting control	✓
+CRC	Cellular result codes	✓
+CREG	Network registration	✓
+CRING	Incoming call type	✓
+CRLP	Radio link protocol	✓
+CRMP	Ring Melody Playback	N/A
+CRSL	Ringer sound level	N/A
+CRSM	Restricted SIM access	✓
+CSCC	Secure control command	✗
+CSCS	Select TE character set	✓
+CSDF	Settings date format	N/A
+CSGT	Set Greeting Text	N/A
+CSIL	Silence Command	N/A
+CSIM	Generic SIM access	✓
+CSNS	Single numbering scheme	✗
+CSQ	Signal quality	✓
+CSSN	Supplementary service notifications	✓
+CSTA	Select type of address	✓
+CSTF	Settings time format	✓
+CSVM	Set Voice Mail Number	✗
+CTFR	Call deflection	✓
+CTZR	Time Zone Reporting	N/A
+CTZU	Automatic Time Zone Update	✓
+CUSD	Unstructured supplementary service data	✓
+CV120	V.120 rate adaptation protocol	✗
+CVHU	Voice Hangup Control	✗
+CVIB	Vibrator mode	N/A
D	ITU T V.25ter [14] dial command	✓

Table 16-3: Supported 27.007 AT Commands (Continued)

Command	Description	Supported ✓=Yes; ✗=No
D*99#	Sets up a packet data call (PDP context) based on profile ID #1	✓
D*99***<n>#	Sets up a packet data call (PDP context) based on profile ID #<n> (<n> is the <cid> in the +CGDCONT command)	✓
+VTD	Tone duration	✓
+VTS	DTMF and arbitrary tone generation	✓
+WS46	PCCA STD 101 [17] select wireless network	✗

>> 17: Band Definitions

Some commands described in this document include input and/or output 'band' parameters, where the value is one of the following:

- An enumerated value representing a network technology and band ([Table 17-1](#)).
Commands using this table:
 - [!DASBAND](#) on page 183
- A 3GPP band number ([Table 17-2](#) on page 300).
Commands using this table:
 - [!ANTSEL](#) on page 35
 - [!MAXPWR](#) on page 239

Note: Band support is product-specific—see the device's Product Specification Document or Product Technical Specification for details.

Table 17-1: Band/technology Enumerations^{a,b}

Band enum	Tech	Band enum	Tech	Band enum	Tech	Band enum	Tech
0	CDMA	22	WCDMA 800	42	LTE B4	60	LTE B24
2	Sleep	25	WCDMA B3	43	LTE B2	61	LTE B25
5	CDMA 800	26	CDMA BC14	44	LTE B3	62	LTE B26
6	CDMA 1900	27	CDMA BC11	45	LTE B5	63	LTE B27
7	HDR	28	WCDMA B4	46	LTE B6	64	LTE B28
8	CDMA 1800	29	WCDMA B8	47	LTE B8	65	LTE B29
9	WCDMA IMT	30	MF 700	48	LTE B9	66	LTE B30
10	GSM 900	31	WCDMA B9	49	LTE B10	67	LTE B31
11	GSM 1800	32	CDMA BC15	50	LTE B12	68	LTE B32
12	GSM 1900	33	CDMA BC10	51	LTE B14	69	LTE B33
14	JCDMA	34	LTE B1	52	LTE B15	70	LTE B34
15	WCDMA 1900A	35	LTE B7	53	LTE B16	71	LTE B35
16	WCDMA 1900B	36	LTE B13	54	LTE B18	72	LTE B36
17	CDMA 450	37	LTE B17	55	LTE B19	73	LTE B37
18	GSM 850	38	LTE B38	56	LTE B20	74	LTE B39
19	IMT	39	LTE B40	57	LTE B21	75	WCDMA B19
20	HDR 800	40	WCDMA B11	58	LTE B22	76	LTE B41
21	HDR 1900	41	LTE B11	59	LTE B23		

- a. Band values not listed (e.g. 1, 3, 4) are reserved.
b. Commands using this table are identified in the chapter introduction.

Table 17-2: 3GPP Bands^{a,b}

3GPP Band	Frequency ranges (MHz)		3GPP Band	Frequency ranges (MHz)	
	Tx	Rx		Tx	Rx
1	1920–1980	2110–2170	30	2305–2315	2350–2360
2	1850–1910	1930–1990	31	452.5–457.5	462.5–467.5
3	1710–1785	1805–1880	32	n/a	1452–1496
4	1710–1755	2110–2155	33	1900–1920	
5	824–849	869–894	34	2010–2025

>> Index (AT commands)

A

A, answer incoming call, 290
A/, re-issue last AT command, 290
!AMR_NB, Vocoder in use (unsolicited notifications), 34
!AMR_WB, Vocoder in use (unsolicited notifications), 34
!ANTSEL, set/query external antenna select configuration, 35
!AVAAUDIO, play/record audio file, 248
!AVAUDIOLPBK, start/stop audio loopback, 249
!AVAUDVOL, set/return audio playback volume, 249
!AVCFG, bind audio profile to device+physical interface, 250
!AVCODECMICTXG, set/return codec Tx path overall gain, 252
!AVDEF, reset audio parameters in NV to default values, 253
!AVEC, enable/disable Echo Cancellation mode for audio profile, 254
!AVMUTE, mute/unmute earpiece/microphone/call waiting tone, 255
!AVNS, enable/disable Noise and Far-end Noise Suppression modes for audio profile, 256
!AVSETPROFILE, select audio profile for CS calls, 257
!AVSETVOL, set Rx volume level, 258
!AVTONEPLAY, play predefined tone, 259
!AVTXVOL, set Tx volume gain, 260
!AVVOCODER, Vocoder in use (related unsolicited notifications), 37

B

!BAND, set/query frequency bands, 38
!BCFWUPDATESTATUS, report status of last firmware update attempt, 166
!BOOTHOLD, reset modem and wait for f/w download, 41

C

&C, set data carrier detected, 289
C, ITU T v.24 circuit 109 carrier detect signal behavior command, 293
+CACM, accumulated call meter, 293
+CACSP, voice group or voice broadcast call state attribute presentation, 293
+CAEMLPP, eMLPP priority registration and interrogation, 293
+CAHLD, leave an ongoing voice group or voice broadcast call, 293
+CAJOIN, accept incoming voice group or voice broadcast call, 293
+CALA, alarm, 293
+CALCC, list current voice group and voice broadcast call, 293
+CALD, delete alarm, 293
+CALM, alert sound mode, 293
+CAMM, accumulated call meter maximum, 293
+CANCHEV, NCH support indication, 293
+CAOC, advice of charge, 293
+CAPD, postpone or dismiss an alarm, 293
+CAPTT, talker access for voice group call, 293
+CAREJ, reject incoming voice group or voice broadcast call, 293
+CAULEV, voice group call uplink status presentation, 293
+CBC, battery charge, 293
+CBM, cell broadcast message directly displayed, 291
+CBMI, cell broadcast message stored in memory at specified location, 291

+CBST, select bearer service type, 293
+CBST, select circuit-switched bearer, 42
+CCCM, current call meter value, 293
+CCFC, call forwarding number and conditions, 293
+CCID, return SIM card's ICCID, 226
+CCLK, clock, 293
+CCUG, closed user group, 293
+CCWA, call waiting, 293
+CCWE, call meter maximum event, 293
+CDIP, called line identification presentation, 293
+CDIS, display control, 294
+CDS, SMS status report after sending a SMS, 291
+CDSI, incoming SMS status report, 291
+CEDRXRDP, read eDRX dynamic parameters, 43
+CEDRXS, configure eDRX, 44
+CEER, extended error report, 294
+CFUN, set phone functionality, 294
+CGACT, PDP context activate or deactivate, 294
+CGANS, manual response to network request for PDP context activation, 294
+CGATT, PS attach or detach, 294
+CGAUTH, PDP connection authentication parameters, set/report, 45
+CGAUTO, automatic response to network request for PDP context activation, 294
+CGCLASS, GPRS mobile station class, 294
+CGCLOSP, configure local octet stream PAD parameters, 294
+CGCMOD, PDP context modify, 294
+CGCONTRDP, PDP context read dynamic parameters, 294
+CGDATA, enter data state, 294
+CGDCONT, define PDP context, 46, 294
+CGDSCONT, define secondary PDP context, 294
+CGEQMIN, 3G QoS profile (minimum acceptable), 294
+CGEQNEG, 3G QoS profile (negotiated), 294
+CGEQNEG, Define EPS Quality of Service, 294
+CGEQREQ, 3G QoS profile (requested), 294
+CGEREP, packet domain event reporting, 294
+CGEV, GPRS network event indication, 294
+CGIEV, indicator event, 295
+CGMI, request manufacturer identification, 294
+CGMM, request model identification, 294
+CGMR, request revision identification, 295
+CGPADDR, show PDP address, 295
+CGQMIN, QoS profile (minimum acceptable), 295
+CGQREQ, QoS profile (requested), 295
+CGREG, GPRS network registration status, 295
+CGSCONTRDP, Secondary PDP context read dynamic parameters, 295
+CGSMS, select service for MO SMS messages, 295
+CGSN, request product serial number identification, 295
+CGTFT, traffic flow template, 295
+CGTFTTRDP, traffic flow template read dynamic parameters, 295
+CHLD, call-related supplementary services, 295
+CHSA, HSCSD non-transparent asymmetry configuration, 295
+CHSC, HSCSD current call parameters, 295
+CHSD, HSCSD device parameters, 295
+CHSR, HSCSD parameters report, 295
+CHST, HSCSD transparent call configuration, 295
+CHSU, HSCSD automatic user initiated upgrading, 295
+CHUP, hangup call, 295
+CIMI, request international mobile subscriber identity, 295
+CIND, indicator control, 295

- +CKEV, key press or release event, 295
- +CKPD, keypad control, 295
- +CLAC, list all available AT commands, 295
- +CLAE, language event, 295
- +CLAN, set language, 295
- +CLCC, list current calls, 295
- +CLCK, facility lock, 295
- +CLIP, calling line identification presentation, 296
- +CLIR, calling line identification restriction, 296
- +CLVL, set audio profile Rx volume, 261
- +CLVL, sets/returns internal loudspeaker volume, 296
- +CMAR, master reset, 296
- +CME ERROR, mobile termination error result code, 296
- +CMEC, mobile termination control mode, 296
- +CMEE, report mobile termination error, 296
- +CMER, mobile termination event reporting, 296
- +CMGC, send command, 291
- +CMGD, delete message, 291
- +CMGF, message format, 292
- +CMGL, list messages, 292
- +CMGR, read message, 292
- +CMGS, send message, 292
- +CMGW, write message to memory, 292
- +CMMS, more messages to send, 292
- +CMOD, call mode, 296
- +CMS ERROR, SMS error (mobile or network error), 292
- +CMSS, send message from storage, 292
- +CMT, incoming message directly displayed, 292
- +CMTI, incoming message stored at specific memory location, 292
- +CMUT, enables/disables uplink voice muting, 296
- +CMUX, configure muxing protocol channel, 48
- +CMUX, multiplexing mode, 296
- +CNMA, new message acknowledgement to ME, 292
- +CNMI, new message indications to TE, 292
- +CNUM, subscriber number, 296
- +COLP, connected line identification presentation, 296
- +COPN, read operator names, 296
- +COPS, operator selection, 296
- +CPAS, phone activity status, 296
- +CPBR, read phonebook entries, 296
- +CPBS, select phonebook memory storage, 296
- +CPBW, write phonebook entry, 296
- +CPFB, find phonebook entries, 296
- +CPIN, enter PIN, 296
- +CPINR, display remaining number of SIM unlock retries, 227
- +CPLS, Preferred PLMN list selection, 296
- +CPMS, preferred message storage, 292
- +CPOL, preferred operator list, 296
- +CPROT, enter protocol mode, 296
- +CPSMS, configure Power Saving Mode (PSM), 50
- +CPUC, price per unit and currency table, 296
- +CPWC, power class, 297
- +CPWD, change password, 297
- +CR, service reporting control, 297
- +CRC, cellular result code, 297
- +CREG, network registration, 294, 297
- +CRES, restore settings, 292
- +CRING, incoming call type, 297
- +CRLP, radio link protocol, 297
- +CRMP, ring melody playback, 297
- +CRSL, ringer sound level, 297
- +CRSM, restricted SIM access, 297
- +CSAS, save settings, 292
- +CSCA, service center address, 292
- +CSCB, select cell broadcast message type, 292
- +CSCC, secure control command, 297
- +CSCS, select TE character set, 297
- +CSDF, settings date format, 297
- +CSDH, show text mode parameters, 292
- +CSGT, set greeting text, 297
- +CSIL, silence command, 297
- +CSIM, generic SIM access, 297
- +CSMP, set text mode parameters, 292
- +CSMS, select message service, 292
- +CSNS, single numbering scheme, 297
- +CSPN, display SIM card service provider's name, 228
- +CSQ, signal quality, 297
- +CSQ, RSSI change across threshold (unsolicited notification), 51
- +CSSN, supplementary service notifications, 297
- +CSTA, select type of address, 297
- +CSTF, settings time format, 297
- +CSVM, set voice mail number, 297
- +CTFR, call deflection, 297
- +CTZR, time zone reporting, 297
- +CTZU, automatic time zone update, 297
- +CUSD, unstructured supplementary service data, 297
- !CUSTOM, customization settings, 52
 - AUTONETWORKMODE, revert to automatic mode?, 52
 - BANDSELEN, enable/disable band selection, 52
 - BOOTQUIETDISABLE, enable/disable Linux kernel messages during boot, 52
 - BOOTUARTDLOADEN, enable/disable F/W download over UART on bootloader, 53
 - CFUNPERSISTEN, AT+CFUN setting persists across power cycle?, 53
 - CSDDISABLE, Enable/disable CSD call, 53
 - DHCPRELAYENABLE, enable/disable DHCP relay feature, 53
 - EXTGPSLNAEN, Enable/disable EXT_GPS_LNA_EN, 53
 - EXTUIMSWITCHEN, Enable/disable fast SIM switch via external switch, 53
 - FASTNUMEN, Enable/disable fast enumeration, 53
 - FLOWNOTIDISABLE, Enable/disable QMI notification events, 54
 - GPIOARENABLE, Control SAR backoff by GPIOs or by AT commands, 54
 - GPSENABLE, Enable/disable GPS, 54
 - GPSLPM, enable GPS in low power mode, 54
 - GPSREFLOC, enable GPS location reporting, 54
 - HARDCODEDIPEN, hard-coded IP enable/disable, 54
 - HSICENABLE, enable/disable HSIC interface, 55
 - ICMPINTSRVDIS, enable/disable internal ICMP service, 55
 - IMCONFIG, image switching configuration, 55
 - IPCHANNELRATEEN, Enable/disable IP channel rate calculation, 55
 - IPV6ENABLE, Enable/disable IPv6 support, 55
 - JAMENABLE, JAM detection enable/disable, 55
 - LTECOEXUARTENABLE, Wi-Fi/LTE Coex control enable/disable, 55
 - LTREJDELAY, Set delay before LTE attach requests are

sent, 55
 PCSCDISABLE, set PCSC functionality, 56
 RMNETREDIALEN, RmNet redial enable/disable, 56
 SIMHOTSWAPDIS, Configure SIM hotswap feature, 56
 SIMLPM, set default low power mode SIM power state, 56
 SINGLEAPNSWITCH, device behaviour when APN details change, customize, 56
 SNTPEN, enable SNTP system time support, 56
 STKUIEN, enable SIM toolkit UI, 57
 UAUDLOADDISABLE, disable firmware download, 57
 UIM2ENABLE, enable/disable UIM2 slot support, 58
 UIMAUTOSWITCH, enable/disable automatic SIM switching, 57
 UIMDETPULL, configure UIM1/UIM2 detect line pull settings, 57
 WAKEHOSTEN, enable/disable host wake-up via SMS/incoming data packet, 58
 +CV120, v.120 rate adaption protocol, 297
 +CVHU, voice hangup control, 297
 +CVIB, vibrator mode, 297

D

&D, set DTR function mode, 289
 D, dial, 290
 D, ITU T V.25ter dial command, 297
 D'99'<n>#, set up packet data call based on profile ID #<n>, 298
 D'99#, set up packet call based on profile ID #1, 298
 D><MEM><N>, originate call to phone number in memory, 290
 D><N>, originate call to phone number in current memory, 290
 D><STR>, originate call to phone number corresponding to a/n field, 290
 !DACGPSTON, return CGPS C/N and frequency, 172
 !DACGPSMASKON, set CGPS log mask, 172
 !DACGPSSTANDALONE, enter/exit Stand Alone (SA) RF mode, 173
 !DACGPSTESTMODE, start/stop CGPS diagnostic task, 173
 !DAFTMACT, put modem into FTM mode, 14, 169, 174
 !DAFTMDEACT, put modem into online mode, 174
 !DALGAVGAGC, return averaged AGC in LTE mode, 177
 !DAGGAVGRSSI, return averaged RSSI, 175
 !DAGSRXBURST, set GSM receiver to burst mode, 175
 !DAGSTXFRAME, set GSM Tx frame structure, 176
 !DALSNSVAL, configure LTE Net Sig value, 178
 !DALSPARANGE, set PA range (LTE mode), 178
 !DALSRXBW, set Rx bandwidth (LTE mode), 179
 !DALSTXBW, set Tx bandwidth (LTE mode), 179
 !DALSTXMOD, set LTE Tx modulation type, 180
 !DALSTXPWR, set Tx power level, 181
 !DALSWAVEFORM, set Tx waveform (LTE mode), 182
 !DASBAND, set frequency band, 14, 169, 183
 !DASCHAN, set modem channel (frequency), 185
 !DASLNAGAIN, set LNA gain state, 187
 !DASPDM, set PDM value, 188
 !DASTXOFF, turn Tx PA off, 188
 !DASTXON, turn Tx PA on, 189
 !DATALOOPBACK, enable/disable and configure loopback mode, 58
 !DAWGAVGAGC, return averaged Rx AGC (WCDMA), 189
 !DAWSPARANGE, set PA range state machine, 190
 !DAWSSCHAIN, enable secondary receive chain, 190

!DAWSTXCW, select transmitter waveform, 191
 !DAWSTXPWR, set Tx power level, 191
 DL, redial last phone number used, 290
 +DR, V42bis compression report, 289
 +DS, V42bis data compress, 289

E

E, set command echo mode, 290
 !ENTERCND, enable protected command access, 14, 28, 29
 !EONS, EONS indicator (unsolicited notification), 59
 !ERR, display diagnostic information, 167
 !EVRC_B, Vocoder in use (unsolicited notifications), 59
 !EVRC, Vocoder in use (unsolicited notifications), 59
 !EVRC_NW, Vocoder in use (unsolicited notifications), 59
 !EVRC_WB, Vocoder in use (unsolicited notifications), 59

F

&F, set current parameters to defaults, 289

G

+GCAP, Request complete TA capabilities list, 289
 !GCCLR, clear crash dump data, 167
 !GCDUMP, display crash dump data, 167
 !GETBAND, return current active band, 59
 !GETRAT, return current active RAT, 60
 +GMI, request manufacturer identification, 289
 +GMM, request TA model identification, 289
 +GMR, request TA revision identification, 16, 289
 !GNSSCONFIG, configure satellite constellations support, 200
 !GNSSDPOMODE, enable/stdisable DPO, 201
 +GOI, request global object identification, 289
 !GPIOINT, GPIO interrupt detected—unsolicited notification, 264
 !GPSAUTOSTART, configure GPS auto-start features, 202
 !GPSCLRASSIST, clear selected GPS assistance data, 203
 !GPSOLDSTART, clear all GPS assistance data, 203, 204
 !GPSEND, end active position fix session, 204, 222
 !GPSFIX, initiate GPS position fix, 205, 215, 222, 223
 !GPSIDREN, enable/disable DR_SYNC, 206
 !GPSLOC, return last known modem location, 205, 207, 216
 !GPSMTLRSETTINGS, query/set MT location request settings, 208
 !GPSNMEASENTENCE, set/get NMEA sentence type, 209, 210
 !GPSSATINFO, request satellite information, 211
 !GPSSTATUS, request position fix session status, 205, 212, 216, 222
 !GPSSUPLURL, query/set SUPL server URL, 213
 !GPSSUPLVER, query/set SUPL server version, 214
 !GPSTRACK, initiate multiple-fix tracking session, 215, 222
 !GPSTRANSSEC, control GPS transport security, 216
 !GPSXTRADATAENABLE, query/set GPS XTRA settings, 217
 !GPSXTRADATAURL, query/set GPS XTRA data server URL, 218, 218
 !GPSXTRAINITDNLD, initiate XTRA download and inject operation, 218
 !GPSXTRASTATUS, current XTRA status, 219
 !GPSXTRATIME, inject GPS or UTC time information to XTRA, 220

!GPSXTRATIMEENABLE, query/set GPS XTRA time settings, 221
 !GPSXTRATIMEURL, query/set GPS XTRA SNTP server URL, 222
 !GSM_EFR, Vocoder in use (unsolicited notifications), 60
 !GSM_FR, Vocoder in use (unsolicited notifications), 60
 !GSM_HR, Vocoder in use (unsolicited notifications), 60
 +GSN, request TA serial number identification, 290
 !GSTATUS, return operational status, 61

H

H, disconnect existing connections, 290
 !HOSTDEVINFO, set/report host device details, 232

I

I, display product identification information, 290
 !ICCID, return SIM card's ICCID, 228
 +ICF, set TE-TA control character framing, 290
 !IDSDEBUGPRINT, enable/disable debug printing, 235
 +IFC, set TE-TA local data flow control, 290
 +ILRR, set TE-TA local rate reporting mode, 290
 !IMAGE, manage firmware images, 70
 !IMPREF, query/set Image management preferences, 72
 !IMSTESTMODE, enable/disable IMS test mode, 235
 +IPR, set fixed local rate, 290

K

!KCELL, display detected cell details, 73
 +KMCLASS, set 2G multislot class, 76
 +KRFMUTE, enable/disable RAT Tx muting, 237
 +KRFMUTE, mute mode notification, 238
 !KSIMSEL, select external SIM interface, 229
 +KSLEEP, configure sleep mode entry based on UART1 DTR, 77
 +KSREP, start-up reporting, enable/disable, 79
 +KSUP, module startup status (unsolicited notification), 79

L

L, set monitor speaker loudness, 290
 !LDTEST, test LED, 192
 !LDTESTOFF, return to normal LED mode, 193
 !LEDTEST, test LED, 193
 !LTEINFO, display LTE network information, 80

M

M, set monitor speaker mode, 290
 !MADC, display ADC values, 265
 !MAPUART, map services to UART, 82
 !MAXPWR, query/set maximum Tx power for specific band, 239
 !MCCELL, enable/disable coin cell charging feature, 266
 !MCUWATCHDOG, MCU watchdog parameters, set/report, 83
 !MODE, network system mode (unsolicited notification), 84
 !MUSLEN, enable/disable unsolicited messaging feature, 84
 !MUXMODE, configure CMUX mode, 85
 !MVCoin, configure coin cell charging feature, 267

N

!NETNUM, query/set number of supported network interfaces, 85
 !NI, network identity (unsolicited notification), 86

O

O, switch from command mode to data mode, 290
 !OSINFO, set/report host device operating system information, 234

P

P, select pulse dialing, 290
 !PACKAGE, return package version string, 86
 !PARTITION, manage partition sizes, 195
 !PATEMP, return current PA temperature information, 87
 !PATEMP, PA temperature state change (unsolicited notification), 87
 !PCDEFER, Deferred Shutdown timer expired (unsolicited notification), 88
 !PCINFO, return power control status information, 89
 !PCOFFEN, query/set Power Off Enable state, 90
 !PCTEMP, return current temperature information, 91
 !PCTEMP, PA temperature state change (unsolicited notification), 92
 !PCTEMPLIMITS, query/set temperature state limits, 93
 !PCVOLT, return current power supply voltage information, 94
 !PCVOLT, PMIC voltage state change (unsolicited notification), 94
 !PCVOLTLIMITS, query/set power supply voltage state limits, 95
 !POWERDOWN, power down the system, 95
 !POWERMODE, set module power saving mode, 96
 !POWERWAKE, configure ULPM/PSM wakeup sources, 99
 !PRIID, query PRI part number and revision, 102
 +PRLVER, display PRL version, 102
 !PSCS, packet switched data call status (unsolicited notification), 103
 *PSRDBS, select operating bands, 104
 *PSSTKI, configure AT interface's SIM toolkit support, enable/disable, 140

Q

Q, set result code presentation mode, 290
 !QCELP13K, Vocoder in use (unsolicited notifications), 105

R

!RESET, reset the modem, 105
 !RI, roaming indicator state (unsolicited notification), 105
 RING, incoming call signal (unsolicited notification), 105
 !RIOWNER, set/query owner (core) of the Ring Indicator pin, 268
 !RMARESET, restore device to original settings, 197
 !RSSI, signal strength (unsolicited notification), 106
 !RXDEN, enable/disable WCDMA Rx diversity, 168

S

&S, set DSR signal, 289
 S0, set number of rings before auto-answer, 291
 S10, set disconnect delay after indicating absence of data carrier, 291
 S3, set command line termination character, 291
 S4, set response formatting character, 291
 S5, set command line editing character, 291
 S6, set pause before blind dialing, 291
 S7, set number of seconds to wait for connection completion, 291
 S8, set number of seconds to wait when comma dial modifier used, 291
 ISARBACKOFF, query/set offset from max Tx power, 241
 ISARGPIO, set external GPIO for SAR control, 244
 ISARINTGPIOMODE, query/set default pull mode for SAR GPIOs, 245
 ISARSTATE, query/set SAR backoff state, 245
 ISARSTATEDFLT, query/set default SAR backoff state, 246
 ISCACT, activate/deactivate data connection, 107
 ISCUMMTU, set/report mtu size, 108
 ISECINFO, display bootloader debug information, 109
 ISELACQ, select RAT acquisition order, 110
 ISELCIOT, set Cellular IOT (CIOT) preferences, 112
 ISELMODE, query/set current service domain, 113
 ISELRAT, query/set current RAT, 78, 114
 ISELSNR, set LTE-NB1 band scan configuration, 116
 ISETCND, set AT command password, 29
 ISMSWAKE, enable/disable SMS host wake-up, 287
 ISMSWAKEWIDTH, set/read SMS Wake signal width, 288
 ISRV, WWAN network status change (unsolicited notification), 116
 ISTKC, report last unsolicited proactive SIM command notification, 141
 ISTKC notification, unsolicited proactive SIM command notification, 142
 ISTKCR, respond to proactive SIM command, 143
 ISTKGC, get (retrieve) data from last unsolicited proactive SIM command, 148
 ISTKMS, inform SIM of menu item selection or get help, 160
 ISTKN notification, response to MO call/SMS control request, 161
 ISTKPD, select host-supported STK features, 163

T

&T, auto tests, 289
 T, select tone dialing, 291

U

!UDINFO, return information from active USB descriptor, 117
 !UDPID, query/set USB descriptor product ID, 118
 !UIMREGSTATE, UIM registration state (unsolicited notification), 118
 !UIMS, select UIM interface, 230
 !UIMSTATUS, UIM status change (unsolicited notification), 119
 !USBCOMP, query/set USB interface configuration, 120
 !USBINFO, return information from active USB descriptor, 121
 !USBPID, query/set USB descriptor product ID, 122

V

&V, return AT configuration parameters, 289
 V, set result code format mode, 291
 +VTD, set DTMF tone duration, 261
 +VTD, tone duration, 298
 +VTS, DTMF and arbitrary tone generation, 298
 +VTS, send DTMF tone, 262

W

&W, Store parameter to user-defined profile, 289
 +WANS, call answered (unsolicited notification), 123
 +WCC, call connected status change (unsolicited notification), 124
 +WCNT, call connected (unsolicited notification), 125
 +WDDI, DTMF tone detection (unsolicited notification), 126
 +WDDM, enable/disable DTMF detection, 126
 +WDSC, configure AirVantage Management Services, 277
 !WDSE, display last AirVantage Management Services error, 279
 +WDSG, display AirVantage Management Services status, 280
 +WDSI, activate/deactivate AirVantage Management Services unsolicited notifications, 281
 +WDSI, AirVantage Management Services event, unsolicited notification, 282
 +WDSR, reply to AirVantage server request, 284
 +WDSS, AirVantage Management Services session configure/connect, 285
 +WEND, call or call attempt ended (unsolicited notification), 127
 +WEXTCLK, enable/disable user clock mode, 269
 +WFWUPD, download/install firmware package, 130, 131
 +WIOCFG, configure external GPIOs, 270
 +WIOR, read GPIO value, 272
 +WIOV, write GPIO value, 273
 +WJAM, jamming event unsolicited notification, 132
 +WJAMTHRESH, jamming detection threshold, set/report, 133
 +WMGF, SMS memory full (unsolicited notification), 133
 +WORG, call origination attempt (unsolicited notification), 134
 +WRID, set/query Ring Indicator duration value, 273
 +WRMICN, roaming icon unsolicited notification, 134
 +WS46, PCCA STD 101 select wireless network, 298
 +WUSLMSK, unsolicited notifications, enable/disable, 135
 +WVMI, voicemail received (unsolicited notification), 138
 +WWAKE, Query wakeup event, 274
 +WWAKESET, set/query Wake event mask setting, 275

X

X, set connect result code format and call monitoring, 291

Z

Z, set all current parameters to user-defined profile, 291
